

5G

Induces Coronaviruses: New Study Models Millimeter Wave Influence on DNA

By Makia Freeman

THE STORY: A new study published at the NIH PubMed site on July 16th 2020, and published earlier elsewhere in June 2020, mathematically models how the millimeter waves of 5G tech could induce the body to create coronaviruses like SARS-CoV-2 / COVID.

THE IMPLICATIONS: Why have authorities desperately tried to silence those pointing out the 5G-coronavirus connection? Why are we worried about supposedly contagious surfaces when battlefield technology is being rolled out worldwide that can penetrate and manipulate our very DNA?

We now know that 5G induces coronaviruses. I was convinced since shortly after the release of the virus in Wuhan, China, that 5G was at the source of the huge scam that has been hoodwinked over the entire world.

A new study mathematically models how 5G induces coronaviruses (such as SARS-CoV-2 or COVID-19) via millimeter wave penetration of our cells. 5G can also influence and change our DNA.

5G induces coronaviruses according to a new study just published on the US NIH (National Institute of Health) website PubMed.gov and published earlier elsewhere. The study, entitled 5G Technology and induction of coronavirus in skin cells (full version here), comes to the shocking conclusion – shocking from a mainstream scientific viewpoint – that 5G Technology can instigate the body to produce viruses as a cellular response.

Guess what? The 5G millimeter waves (so-called because they operate in extremely high frequencies where there is less than a millimeter between the wave peaks) can make the body produce not just any class of viruses but actually coronaviruses! This research peels back another layer of Operation Coronavirus, affirming the coronavirus 5G connection that I and others were warning about in February when this entire pandemic got off the ground.

Research Spells Out How EMF in the Form of 5G Induces Coronaviruses and the entire abstract of the study here:

“In this research, we show that 5G millimeter waves could be absorbed by dermatologic cells acting like antennas, transferred to other cells and play the main role in producing Coronaviruses in biological cells. DNA is built from charged electrons and atoms and has an inductor-like structure. This structure could be divided into linear, toroid and round inductors. Inductors interact with external electromagnetic waves, move and produce some extra waves within the cells. The shapes of these waves are similar to shapes of hexagonal and pentagonal bases of their DNA source. These waves produce some holes in liquids within the nucleus. To fill these holes, some extra hexagonal and pentagonal bases are produced. These bases could join to each other and form virus-like structures such as Coronavirus. To produce these viruses within a cell, it is necessary that the wavelength of external waves be shorter than the size of the cell. Thus 5G millimeter waves could be good candidates for applying in constructing virus-like structures such as Coronaviruses (COVID-19) within cells.”

In plain English, this is what it says: DNA is constructed from electrons and atoms which can be influenced by external EM waves. These waves produce holes in the cells. The body creates hexagonal and pentagonal DNA bases to fill these holes, and these bases can join together to make virus-like structures such as coronaviruses within our cells. This builds on the previously known fact that 5G acts upon the body's cells like a transmitter, and these cells in turn (especially the skins cells) act like antennae,

absorbing signals and adjusting themselves based on those signals. This is, quite literally, mass programming.

5G Has Very Short Wavelengths, Allowing it to Penetrate Cells and Influence (Control) DNA

The study continues by outlining the exact method by which 5G induces corona-viruses:

“Thus, a DNA could emit some waves and interact with external waves. However, most waves have a length more than the size of cells and pass them without any effect. Only limited waves with lengths smaller than millimeter could penetrate into cell membrane and interact with DNA inductors. These wavelengths could be observed in 5G technology. Thus, towers in this technology could exchange waves with DNAs within cells and produce various types of diseases such as COVID-19. In this study, we propose a mechanism for exchanged waves between towers and host cells to obtain effective wavelengths. In our method, skin cells act as dermatologic antenna, take waves in 5G technology and transfer them to host cells. Then, DNAs within host cells interact with these waves and move. By motions of a DNA, some hexagonal and pentagonal holes emerge. To fill these holes, some bases are constructed within cells. These holes join to each other and form RNAs of COVID-19.”

This is scary enough, however the bigger picture is even worse. The tiny waves of 5G can accomplish what other EMF technology (4G and below) cannot do, by penetrating the cell membrane and interacting with our DNA inductors. We’re talking about the power to influence and manipulate our very DNA here:

“An antenna could take waves in which their wavelengths are equal to its size. Thus, millimeter waves in 5G technology could be taken more by dermatologic antennas. These waves could pass the cell membranes, enter the nucleus and interact with DNAs. Previously, it has been shown that a DNA could act as the inductor and receiver or sender of waves. Thus, a DNA within a dermatologic cell like a keratinocyte receives external waves and sends them to DNAs of other cells like melanocytes. Waves in 5G technology and higher technologies could contribute in gene expressions, turn on some genes and turn off others.”

This echoes what I wrote in the 2017 article 5G and IoT: Total Technological Control Grid Being Rolled Out Fast where I referenced the research of Israeli scientist Dr. Ben-Ishai, who showed that our sweat ducts work like helical antennas, absorbing energy and EM frequencies between 75-100 GHz, part of the range used by 5G.

5G Induces Coronaviruses – Further Implications

So what are the implications of this study? There are many.

Firstly, if 5G can be weaponized and aimed at people, firing EMF and manipulating their DNA to produce coronaviruses, then the external threat is not some new killer virus, but rather destructive battlefield technology disguised as telecommunications

technology. Anyone still looking at airborne particles and worried about contaminated surfaces is missing the point completely.

Secondly, building upon the first point, if the NWO (New World Order) controllers running this agenda have the power to induce people to make coronaviruses, or even a specific strain like SARS-CoV-2 (assuming it exists), then there is no 'contagion' or viral spread as such. Some such as Dr. Stefan Lanka believe contagion itself is a myth. Either way, there is no medical or legal justification for shutting down small businesses, quarantining and isolating people, forced mask wearing and social distancing, because in this scenario some new virus is not being spread; people are being induced to create it inside their own bodies.

Thirdly, this research further bolsters the idea that the COVID phenomenon is linked to oxygen shortage (aka hypoxia or under oxygenation). This is explained in several ways, e.g. by the theory of Dr. Robert Young that COVID is actually blood coagulation, and by the 5G 60GHz effect on oxygen molecules. To recap, it is a fact that the 60 GHz band (used by 5G) affects oxygen. For instance, these technology/telecommunications websites (here, here and here) explain how oxygen absorbs a very high percentage (98% on one website) of 60 GHz waves, therefore making it undesirable and ineffective for radio and communication. That analysis, of course, is from the viewpoint of efficient telecommunication. However, my viewpoint is the opposite; I am coming to the topic looking at it from a health perspective, so I don't care how much O2 is impeding telecommunications, I care about how much the 60 GHz is impeding my ability to breathe! Dana Ashlie explains in this February 2020 video (around the 11:00 mark) that when the O2 molecules absorb the 60 GHz waves, it affects the spin of their electrons. Changes to these spin frequencies in turn have impacts on human biology. It reduces the oxygen molecules' ability to fully bind with and saturate the hemoglobin in our blood, thus preventing us from fully up taking oxygen, thus depriving us of fully oxygenating ourselves. With lower oxygen levels, our energy and immunity falls, and we become weaker.

With this new information, think back to some of the headlines from January, e.g. Huawei Builds 5G Base Stations to Help Fight Corona Virus. Did you catch that – to "help" fight coronavirus?! It's a sick joke. The cause of our problems is again presented as the solution.

Final Thoughts

This research is another crucial piece of the puzzle. We have known for a while now that artificial EMF is causing great harm to us. We have also known for a while that 5G is extremely dangerous in many ways, including hijacking our sweat duct antennae, bombarding us with pulsed waves (more damaging than continuous wave radiation), amplifying DNA damage via VGCCs, promoting deep EMF penetration and having mutagenic and carcinogenic effects, being emitted from a phased array structure that has been used for crowd dispersal. This research is more evidence that we are being deliberately poisoned, and that tales of species-jumping bat viruses from China are a

red herring. We must continue to be vigilant in opposing 5G in all its forms, and doing what we can in our local area to prevent the 5G rollout.

The study, jointly produced by scientists from Guglielmo Marconi University, Central Michigan University and First Moscow State Medical University, claims that 5G millimeter waves stimulate DNA in a way that causes cell nuclei to produce coronaviruses.

“In this research, we show that 5G millimeter waves could be absorbed by dermatologic cells acting like antennas, transferred to other cells and play the main role in producing Coronaviruses in biological cells,” the study states.

David Knight breaks down the groundbreaking new NIH report that sheds more light on what the 5G/Coronavirus connection might be.

“DNA is built from charged electrons and atoms and has an inductor-like structure. This structure could be divided into linear, toroid and round inductors. Inductors interact with external electromagnetic waves, move and produce some extra waves within the cells. The shapes of these waves are similar to shapes of hexagonal and pentagonal bases of their DNA source. These waves produce some holes in liquids within the nucleus. To fill these holes, some extra hexagonal and pentagonal bases are produced. These bases could join to each other and form virus-like structures such as Coronavirus.”

“To produce these viruses within a cell, it is necessary that the wavelength of external waves be shorter than the size of the cell. Thus 5G millimeter waves could be good candidates for applying in constructing virus-like structures such as Coronaviruses (COVID-19) within cells.”

The study goes on to suggest that the cancer-causing qualities of 5G are due to how it alters DNA within the body.

“In another study, it was argued that 5G technologies cause great harm to human health. Cancer is only one of the many problems. 5G causes 720 (factorial) different diseases in human beings, and can kill everything that lives except some forms of microorganisms (12). To consider the effects of 5G millimeter waves on biological systems, we propose a model which describes the process of exchanging waves between 5G towers and host cells.”

As Infowars reported over 6 months ago, Wuhan, the global epicenter of the coronavirus pandemic, rolled out 5G systems just weeks before the COVID-19 outbreak hit, with some scientists claiming that 5G’s effects on human cells can cause “flu-like symptoms.”

Concerns about 5G's role with coronavirus were even raised by Hollywood stars like Woody Harrelson, who shared a study in April suggesting a "causal" relationship between 5G systems and the coronavirus.

I have written numerous articles on the 5G technology roll-out and its harm to humanity. This study by the National Institute of Health is the coup d'état exposure of the harm of 5G. Pushback has been huge by those seeking to discredit those of us who tie 5G to the Wuhan virus and distract our focus on a lab manmade virus is the source of the issue.

Keep in mind, When the Deep State unleashed the virus in China, what they did was make every citizen receive a vaccine the year prior, which had the pathogen in it, and when they were ready to 'unleash' the virus to media, they turned on the 5G towers. Unfortunately in China the towers are still dangerous. But this is why you seen footage of people collapsing on the spot. It was the combination of the mandatory shots plus 5G.

The Deep State wanted the World to fear this man-made virus, make us think its airborne and killing many, so that we would comply with poisonous vaccines. Had Hillary won no doubt NWO would have been finalized. As you can see in America, the states which are Democrat are on lock down, and the states which are Republican are not on lock down. Yes?? May people verify if this is true? For every Democrat (fan), what we are witnessing is them having complete control over us. Keeping us indoors, scared to go outside, mandatory masks, we can't go back to work all year until we comply to vaccines, etc. Is this what you want?

The world's .001% and Deep State have been running America Pre-Columbus days. They have been purposely keeping us sick and killing us through but it's not over by the telecommunications race to 6G.

We have not seen the worst given the fact that the telecommunications industry are at work on 6G. Samsung released a press statement in mid-July of 2020.

Samsung has revealed its plans for 6G technology

"But the main user of 6G technology, according to Samsung, will actually be machines. The firm cites estimations that there will be 500 billion connected devices in the world by 2030 – 59-times larger than the expected world population by that time."

"It will be possible to replicate people, devices, objects, systems, and even places in a virtual world,' a research paper states"

'Samsung has revealed its plans for 6G technology, outlining its vision for "digital twins" of our physical selves.

In a research paper published on Wednesday, the South Korean smartphone giant stated that there will be three key 6G services: Immersive extended reality (XR); high-fidelity mobile hologram; and digital replicas.

“With the help of advanced sensors, AI, and communication technologies, it will be possible to replicate physical entities, including people, devices, objects, systems, and even places, in a virtual world,” the white paper states.

“In a 6G environment, through digital twins, users will be able to explore and monitor the reality in a virtual world, without temporal or spatial constraints. Users will be able to observe changes or detect problems remotely through the representation offered by digital twins.”

Such advancements could contribute to the trend of people increasingly working and socializing remotely, with video calls replaced with immersive reality communication enabled by next-generation virtual reality (VR) devices and holographic displays.

Samsung states that people will not only be able to observe, but also interact with the digital twins. For example, a user could work in an environment on the other side of the world through their digital twin, “which could be a representation of a remotely controlled set of sensors and actuators.”

In order to achieve this, 6G will need to have exceptionally fast data transfer rates and ultra-low latency when controlling devices remotely. 6G performance will support a data rate of 1,000 Gbps, which is 50-times the peak data rate of 5G.

How 6G will compare to 5G. (Samsung)

But the main user of 6G technology, according to Samsung, will actually be machines. The firm cites estimations that there will be 500 billion connected devices in the world by 2030 – 59-times larger than the expected world population by that time.

“As the number of connected machines grows exponentially, those machines will become dominant users of 6G communications,” the paper states.

“Looking back at the history of wireless communications, technologies have been developed assuming services for humans as the major driving applications... We expect new 6G technologies have to be developed specifically to connect hundreds of billions of machines taking into account what is required for machines.”

Other use cases for 6G include personal radar and indoor maps generated by smartphones, according to researchers at the University of Bologna and the French Alternative Energies and Atomic Energy Commission.

The institutes announced in May that they are working on several 6G-related projects with the help of funding from the ATTRACT consortium led by CERN.

“Outdoors you have Google Maps. The challenge is to achieve what we are currently doing today with the outdoor scenario,” Davide Dadari, an associate professor of electrical engineering at Bologna, told *The Independent*.

New generations of wireless telecommunications technology are generally released every 10 years, with the arrival of 5G’s successor pegged for 2030. But Samsung claims the earliest commercialization of 6G could occur as early as 2028.

In order to accelerate research for 6G, Samsung launched the Advanced Communications Research Center last year.

“While 5G commercialization is still in its initial stage, it’s never too early to start preparing for 6G,” said Sunghyun Choi, who heads Samsung’s 6G research Centre.

“We’ve already launched the research and development of 6G technologies by building upon the experience and ability we have accumulated from working on multiple generations of communications technology, including 5G.”

This is shocking for sure and certainly no surprise to me after having read Dr. Arthur Firstenberg’s book in January and February. I will have more on this and people need to avoid bringing the 5G technology into their homes and environment.

It is of the utmost urgency that this information is shared, because mandated ID2020 microchipping is months away.
