

The 5G's (End Game) Trap Will Soon Be Activated!

Part 7

One of the sharpest minds that have come forward on this Covid scamdemic has been Steve Kirsch. Mr. Kirsch posted a piece titled Sanity checks!

Sanity checks

People tell me I'm crazy for believing the COVID vaccines are unsafe. But my list of sanity checks is objective evidence that I'm not the one who is crazy.

Executive summary

People tell me I'm crazy all the time for believing that the COVID vaccines are unsafe.

But all I am doing is making the obvious conclusions from all the data in plain sight, including people's reactions when challenged.

For example, at dinner last night, I revealed that my occupation was a "myth buster" and then people asked "what myth?" and I said that the vaccines were unsafe. Later, one of the attendees told me I should be ashamed of myself for spreading misinformation. I asked, *"Do you have any data to back that up?"* She said, *"I don't want to talk to you."* Does that sound familiar?

Here's a short checklist of observations that would be very hard to explain if the vaccines are safe and effective.

The Sanity Checks

The overall sanity check is that all the data (including observing peoples' behavior when challenged) I've seen is consistent with the unsafe hypothesis and not consistent with a very safe vaccine with mild, short-lasting side-effects.

Here's a list of data points that suggest that I'm sane in no particular order:

1. **Hundreds of VAERS safety signals are being deliberately ignored by the CDC including the all-important death safety signal.** The death safety signal was triggered using the CDC's own methodology, and nobody in the world will acknowledge that. This tells you there is a cover-up.
2. **VAERS is 5.4X underreported for the COVID vaccines compared to earlier vaccines.** When you actually collect the data, [you find that VAERS appears to be around 5.4X underreported compared to earlier vaccines](#). This means that when we find that "acute cardiac failure" is elevated by 475X in VAERS, the actual increase is 2,565X higher than earlier vaccines. So we are probably looking at around 2,500 deaths per million doses of the vaccine. Even if this estimate is off by 100X, this is way past the stopping condition for a safe vaccine.
3. **Healthcare workers observe too many vaccine related deaths** for this to be a safe vaccine. Just in [the first 281 healthcare workers to respond to a survey](#), they observed over 1,128 vaccine-related deaths. That is not normal. It should be a stopping condition in any normal society. There are over 22 million healthcare workers in America which is 100,000 times larger than my sample size..
4. **CDC hides from the facts.** The CDC refuses to comment on anything I've written despite the fact that they are focused on reducing the amount of misinformation in order to reduce vaccine hesitancy. They won't even return my calls offering to discuss our disagreements. This makes no sense since in a Google search for "misinformation superspreaders" I'm usually the top result. How do they expect to resolve the open issues by not communicating? They haven't answered that (and the mainstream media won't ask them this obvious question either).
5. **The top US safety officials duck and run for cover when you try to show them adverse safety data.** Scientists are supposed to seek the truth, not duck and run for cover when asked if they want to see safety data. [Read this article about ACIP chair Grace Lee](#). Rather than answer a simple question about whether she wanted to see the confidential Israeli safety data (that the Israeli government is hiding from the public), she chose to call the police. It's caught on video.
6. **[The FDA's Dr. Peter Marks publicly said he'd do anything to reduce vaccine hesitancy](#).** I said the simplest way is to debate us and show the world how we got it wrong. He declined to do that. I still don't know why. Do you?

7. **There are no debates.** No public health authority or any of the experts relied on by the mainstream media, will engage in a debate. We are willing to pay them to attend but nobody wants to, not for any amount of money.
8. **Even David Gorski, the doctor who prides himself on discrediting misinformation spreaders, won't touch** the VAERS analysis showing that the results cannot be explained by "overreporting." Nor will he verify the fact that VAERS has generated safety signals that nobody noticed, even when I offered him up to \$1M to compensate him for his time.
9. **The large number of "black swan events"** in plain sight is simply too high to be consistent with the "safe and effective" claim. These events are typically sudden unexpected deaths or injuries in people.
10. **The messages from the grave** from high profile people. For example, the inventor of the v-safe program Joel Kallman died under very mysterious circumstances after getting his second dose of the vaccine. He supposedly died from COVID but he never got COVID. Nobody's talking. See [Oracle VP Joel Kallman Dies of "Covid" After Receiving Second Vaccine Injection](#). This [article points out that there was no news that a prominent vaccinated person got COVID](#). It would be interesting to see Joel Kallman's v-safe record. Why don't they release it?
11. **The Doug Brignole test.** Brignole challenged the vaccine and said if he didn't die, people like me should apologize. He died shortly after getting his latest vaccine.
12. **The Died Suddenly Facebook group** had over 300,000 members and was growing at 20,000 new people a day at the time Facebook removed it. This suggests a lot of people are dying suddenly all of a sudden. I wonder why?
13. **Polling done through independent polling companies** (using their lists) show people believe more people have been killed by the vaccines than by COVID. This would be impossible if the vaccines are perfectly safe. See [Evidence of Harm](#).
14. **The [unexplainably high number of people dropping dead in plain sight](#)** recently and nobody even attempts to explain the cause or reveal the vaccination status of those who died.
15. **The book *Turtles all the way down: vaccine science and myth*** shows that the entire medical community has been fooled into believing that all vaccines are safe and effective. If it can happen for decades for all vaccines, it's not much of a stretch to believe it is happening with the COVID vaccines as well. There is a reward of \$1K for anyone finding a mistake in the book. So far, no takers.
16. **Embalmer statistics.** Even today, [around 60% or more of the cases have strange clots associated with the COVID vaccine](#).
17. **Insurance company data.** There was a 12 sigma increase in the number of deaths in people under 60 in Q3 and Q4 of 2021. This corresponds to the peak of vaccination in April (there is a 5 month delay from peak vaccination to peak death).
18. **The McCullough assumption.** If a healthy person suddenly dies, and there's no antecedent disease, *it's the vaccine until proven otherwise.*" (See [Two top cardiologists implicate COVID vax in all unexplained heart attacks since 2021](#)).

19. **Ignoring doctors who point out troubling safety statistics.** Dr. William Makis has pointed out [80 doctors in Canada who died of suspicious circumstances](#) in close time proximity to the COVID jabs. [He wrote a letter to the CMA pointing this out and calling for an investigation](#). He was ignored. This should be extremely troubling to all doctors in Canada.
20. **Extreme anecdotes.** Stories like 6 stents, Wayne Root's wedding, my survey of over 600 people confirming Root's statistics, the podiatrist statistics, etc.
21. The Pfizer Phase 3 trial had more deaths in the vaccine group. The deaths were never properly investigated. Pfizer won't comment.
22. **Independent validation.** Dr. Naomi Wolf's team [independently validated my claims on Fox News](#) of hundreds of thousands killed and millions injured.
23. **UK data scientist Joel Smalley hasn't found any data supporting the safety of the COVID vaccines yet.** He's been looking worldwide since the start of the vaccination program for positive news on vaccine safety and hasn't found anything yet.
24. **The people in charge keep getting it wrong.** It's surprising we don't trust the people who accurately predicted what has happened and continue to trust the people who got it wrong.
25. **It's been over 18 months and I still haven't found a single person who is willing to explain how any of this data (such as the items listed in [Evidence of Harm](#)) is consistent with a perfectly safe and effective vaccine.** That should make anyone suspicious.
26. **Prominent people who once promoted the vaccine as safe and effective are now realizing that their original beliefs were based on trust and are calling for an immediate halt to the vaccines.** When they look directly at the evidence, they find that their trust was misplaced. [Dr. Aseem Malhotra](#) is the latest high-profile doctor to come to this realization and nobody wants to debate him either.
27. **Other countries are admitting their mistakes.** Denmark is [now not vaccinating anyone under 50 years old](#).
28. **Top doctors are calling for an end to booster mandates in universities in published papers.** They are being called [unethical](#) because the cure is worse than the disease. Amazingly, there is no discussion on college campuses after that paper came out. For example, at [Stanford, there is complete silence with no debate](#).
29. **[A recent poll done in Australia showed huge dissatisfaction with the COVID vaccines](#):** An Australian poll of 45,000 respondents showed that only 35% of the vaccinated would get the shot again. Not a single unvaccinated person said they regret the decision (there were 35% unvaccinated). So only 22% of those surveyed are moving forward with future shots. The mainstream media doesn't acknowledge the poll.
30. **I hear stories all the time about doctors who privately tell people that they are very worried by what they are seeing but keeping quiet to save their jobs.** [Here's one in the comments](#) of this article. If the vaccine is safe and effective, what's the explanation for this?

Still think I got it wrong?

Any doctor who thinks all of the above is just misinformation should join a vaccine injury support group and spend some time getting to know the vaccine injured and hear their stories. Here are a links to groups that haven't been shut down yet that will welcome you:

[Vaccine Injury/Side Effects Support Group](#) (Facebook)

[Covid Vaccine Injury Support Group](#) (Trial Site News)

Summary

I have yet to find anyone who claims that I'm wrong about the COVID vaccines that are willing to sit down with me or any of my [misinformation spreader colleagues](#) to go through any of the data and show how it is consistent with the "safe and effective" narrative. They all decline.

I fail to understand how declining to engage in a discussion will save lives, but none of the people who decline will explain that.

More than two years ago, UCSF Professor Vinay Prasad co-authored a superb op-ed entitled, "[Scientists who express different views on Covid-19 should be heard, not demonized](#)."

Perhaps someone has written an opposing op-ed that argues convincingly that Vinay was wrong and that scientists who express different views should be demonized and not heard?

Government Spying on public using Contract Tracing System

U.S. citizens were given secret Covid "decree violation" scores according to Tom Parker writing at *Reclaim The Net*, October 25, 2022.

Voter analytics firm PredictWise harvested location data from tens of millions of U.S. cellphones during the initial Covid lockdown months and used this data to assign a "Covid-19 decree violation" score to the people associated with the phones. You ask what is "Covid-19 decree violation?" I knew of these violation scores three years ago to be part of contract tracing system to see who were getting the vaxxes by monitoring your cell phone activity.

These Covid-19 decree violation scores were calculated by analyzing nearly two billion global positioning system (GPS) pings to get "*real-time, ultra-granular locations patterns*." People who were "*on the go more often than their neighbors*" were given a high Covid-19 decree violation score while those who mostly or always stayed at home were given a low Covid-19 decree violation score.

Not only did PredictWise use this highly sensitive location data to monitor millions of Americans' compliance with Covid lockdown decrees but it also combined this data with follow-up surveys to assign "Covid concern" scores to the people who were being surveilled. PredictWise then used this data to help Democrats in several swing states to

target more than 350,000 “Covid concerned” Republicans with Covid-related campaign ads.

In [its white paper](#), PredictWise claims that Democrats were able to “deploy this real-time location model to open up just over 40,000 persuasion targets that normally would have fallen off” for Mark Kelly who was running for Senate at the time and has now been elected.

“PredictWise understood that there were potential pockets of voters to target with Covid-19 messaging and turned high-dimensional data covering over 100 million Americans into measures of adherence to Covid-19 restrictions during deep lockdown,” the company states in the white paper.

PredictWise doesn’t provide the exact dates when this location data was collected but its white paper does note that the data was collected during Covid lockdowns and used during Senator Kelly’s 2020 election campaign. State-level U.S. lockdowns [began on March 15, 2020](#) and Kelly was [elected on November 4, 2020](#) so the data appears to have been collected during the first few months of this 11 month period.

Location data and survey data are just two of the many types of data PredictWise claims to have access to. According to its white paper, PredictWise also tracks “telemetry data” (which is “passively sourced cell-phone data”), media consumption data, and unregistered voter data (which contains verified data on over 50 million unregistered voters that’s updated daily and sourced from credit files and portal registration data). Additionally, PredictWise claims that “Crate&Barrel” (which seems to be a reference to the online furniture and home decor shopping portal Crate & Barrel) is one of the portal registration data sources it has access to.

In total, PredictWise says its data “tracks the opinions, attitudes, and behaviors” of over 260 million Americans – a figure that represents 78% of [the entire US population of 333 million](#).

PredictWise uses the data it collects to create scores on 13 issue preference clusters and 7 value-frame, or psychometric clusters. These clusters use more than 30 million behavioral data points. PredictWise also claims to be able to use this data to predict the party of unregistered voters.

This mass surveillance of location data and lockdown compliance is just one of the many examples of the large-scale data harvesting that occurred during the pandemic. Private companies [tracked the everyday activities of citizens, pushed remote learning surveillance technologies, increased surveillance in the workplace](#), and more. Meanwhile, governments ushered in numerous forms of surveillance such as [forcing citizens to wear ankle bracelet trackers](#), [secretly surveilling vaccine recipients via their phones](#), and [combining vaccine passports with digital IDs](#).

Why am I concerned about Tom Parker's report? It's not because they can target me for my political party affiliation or my buying habits. It is really about being surveilled electronically. If they can reach out and touch someone they can construct a "hit" list just as easy when we get to the point when their End Game Plan is ready to be executed. That GPS locator chip in your cell phone is an efficient homing device that could send a GPS guided missile down on your or my residence as easily as an Air Force launching a missile on an Iraqi military convoy. I know that it is unlikely to be the case relative to the cost/benefit use of air-to-ground missiles.

But 5G wireless energy for communication is a two-edged sword. Your cell phone becomes a weapon of mass destruction once it is "modulated" to the lethal 60-GHz signal beam range. You can scoff and dismiss it but as my closing article in Part 6 stated the World Health Organization plans for a decade of viruses between 2020 and 2030. The proof that all these alleged viruses are man-made is beyond question. The evidence is abundant and we all live with a "bull's eye" on our back. The article that follows this is by Dr. Richard Delgado from the La Quinta Columna research group reports on what he and his team have found in the vaxxines over the past year. This confirms what I was saying three years ago about this being an attack to eliminate the elderly. The leaders of the U.S. have broken the "Social Contract" with its citizens. They want us DEAD!

Spanish biostatistician Dr. Ricardo Delgado from the La Quinta Columna research group reports on what he and his team have found in the vaxxines over the past year. Each statement Dr. Delgado makes here is accompanied by illustrations and details of the published, peer-reviewed scientific papers that back up his claims. Click on "Here is What Really Is in the Vaccines just below for the video portion. A translated transcript is found below the link:

Here is What Really Is in the Vaccines

TRANSLATED TRANSCRIPT

Good afternoon, Everyone. My name is Ricardo Delgado and I am the founder and director of La Quinta Columna.

All of the vaxxines tested (Pfizer, AstraZeneca, Janssen and Moderna) contain nano-technology exclusively. We have found nano-routers, which also emit MAC addresses that can be detected with Bluetooth wireless technology by just using your own mobile phone and the help of an app.

We have found nano-antennas and [plasmonic antennas](#) for the amplification of these signals.

We have also identified nano-rectennas, which act as rectifier bridges of

alternating/direct current, codecs and certain logic gates for the encryption of these nano-communications emitted from the inoculated individual to a remote server.

The primary material for creating of these micro-sculptural complexes is graphene oxide, the presence of which is decisive for the self-assembly of these structural complexes.

The main mechanism of the exfoliation of graphene oxide in the body, into quantum dots are natural bio-degradation mediated by the enzyme myeloperoxidase and the Teslaphoresis mechanism, which are microwave electromagnetic fields emitted from mobile phone signals with different frequency ranges.

Graphene oxide injected into the body acquires magnetic properties in contact with hydrogen and living cells. This is why most injected people have exacerbated magnetism at the point of the inoculation and subsequently in the upper solar plexus and the skull.

Graphene oxide is detected in the body by our immune system as if it were a pathogen. Once injected, it has an affinity for the central nervous system – basically, the spinal cord and our brain, because of its higher electro-conductivity. In the central nervous system, it causes the immobilization of limbs, strokes, paraplegia and alteration of the nervous system.

Graphene oxide has a blood clotting factor and increases thrombogenicity or thrombus proliferation. The ultimate consequence of thrombi is all kinds of cardiovascular accidents, such as embolisms, ischemias, strokes, aneurysms, etc.

Graphene oxide also has an affinity for electrical organs, such as our heart, especially when its cardiac activity increases and therefore, its electrical activity. At that moment, this graphene oxide targets the heart and inflames it, generating myocarditis or pericarditis.

In addition, graphene oxide has the ability to absorb electromagnetic radiation from our environment and multiply it with a transistor effect. Thus, it causes small discharges that cause arrhythmias in our cardiac system. This explains why so many athletes are suffering from arrhythmias when they have increased cardiac activity.

Consequences of these arrhythmias are fainting, blackouts or syncope linked – or not – to unexpected or sudden death. A large part of our vaxxinated population is suffering unexpected or sudden death when interacting near these microwave sources.

Graphene oxide also has the capacity to generate mutagenesis, chromosomal alteration and cancer, so that people who have recently suffered tumors or neoplasms after vaxxination will rapidly resurface a line of metastasis and those who are completely healthy will be at high risk of developing cancer.

Graphene oxide is extremely toxic and its toxicity is also dependent on the electromagnetic radiation it absorbs. Wherever it goes, it generates tissue inflammation, systemic or organ inflammation and a cascade of free radicals.

When the oxidative stress generated by this toxic substance inside the body breaks the equilibrium in the "redox balance" and exceeds a certain threshold above the antioxidant levels of our endogenous glutathione, our immune system collapses and favors the famous cytokine storm.

This graphene oxide, which is injected as a prime material in "vaccines" is eliminated from the body through our lungs but if it is irradiated while found in the lungs, the subsequent inflammation of the lung tissue causes bilateral pneumonia.

If the vaccinated survive the initial doses of graphene oxide injected into their blood, it will be degraded in the body by the neutralizing antibodies that are responsible for its degradation.

Once the graphene and its toxicity are gone, so are the antibodies that neutralize the substance, which also trigger our immunoglobulins. This is why people are being forced to be re-vaccinated every three months, in order to maintain the body's levels of this toxic substance, by claiming that they no longer possess immunity.

In short, the non-existent, non-isolated, non-purified, non-cultivated SARS-CoV-2 presented to us in the official version and its variants, is in reality the graphene oxide introduced consciously and voluntarily in the flu vaccine of the 2019-2020 campaign. In other words, the disease, relabeled COVID-19 is simply a graphene-enhanced acute irradiation syndrome.

Therefore, the first and basically the only artificial wave had our elderly and nursing homes as its target population, whose flu vaccination rate is very close to 100%. Our elderly were previously vaccinated with this substance and then irradiated with the famous cellphone antennas, which suspiciously, 8 out of 10 are placed near nursing homes.

They justified the genocide of our elderly as a pretext to tell the entire world population that we were facing a new coronavirus, so that under the fear of this alleged "contagion", they could proceed to inoculate the entire world population with graphene oxide. The aim is to eliminate a large part of the population and use the behavioral modulation properties of graphene oxide in the field of neural science and artificial intelligence for the remaining population.

Graphene oxide has a special affinity for neurons. Once installed in neurons, it generates an artificial neural network that gradually replaces the natural neural network. When the size of the graphene oxide nanoparticles is less than 35 nanometers, they easily pass through our blood-brain barrier (a membrane that protects our brain from possible damage coming from the outside) and gain access to our own neural network.

On the one hand, graphene oxide manages to break neuronal synapses, so that our brain can be mapped and literally collect information, such as memories, local thoughts, sensations, emotions or feelings. You will now understand why, during this pandemic, legislation such as the "NeuroRights Act" has been passed in certain countries.

Moreover, this graphene oxide can be stimulated remotely and wirelessly, using for this purpose, the implementation of the new 4G, 4Gplus and **5G** technology. All vaxxinated people send their data to an external server controlled by Artificial Intelligence (probably financed by Mr. Elon Musk).

This synthesis of information is provided as a synopsis of more than 20,000 hours of research, working with a multidisciplinary group of scientists and is based on the scientific discoveries of Dr. Pedro Campras' final technical report, which provides unequivocally conclusive evidence of the presence of reduced graphene oxide (rGO) in samples of the vaxxine produced by AstraZeneca, Moderna, Pfizer and Janssen.

This research also emerges from scientific analysis of the material and observational evidence. We understand that they have taken advantage of the general ignorance and lack of knowledge of the medical and health communities regarding matters such as nanotechnology to carry out this sinister plan of what they call Agenda 2030.

You can learn more about this valuable information at LaQuintaColumna.net, where you will find all the evidence and scientific articles stated here. Since the "vaccination process" is global, we are facing the disappearance of the human species as we know it within a few months. They call it post- or transhumanism or simply the Human 2.0 process.

In that new stage, the automaton survivor will be deprived of autonomous thought autonomy and freewill; a slave species entirely dependent on these technocratic oligarchies.

La Quinta Columna is made up of millions of people around the world, who seek to maintain the essence of human beings, respect for humanity and their dignity as a unique species. La Quinta Columna has uncovered this crime against humanity, against its life and against its very nature.

Please share this vital information with all those around you.

Here is What Really Is in the Vaccines

This new information brings into question all those booster shots Joe Biden is supposed to have taken. I read on Tuesday, October 25, 2022 that Joe Biden or his double received his 5th booster. The sympathy value has long lost its meaning here. All the

talking bobble heads have beat this drum for months, Rochelle Walensky has Covid, Dr. Fauci has Covid again, blah blah. We know the creator of the Covid vaxxes state he did not get the vaxx. Faking symptoms are a ruse to get the unvaxed to lower their guard and take the graphene oxide nano-particles of death!

The Hidden Dangers of Wireless Technology and How to Protect Yourself

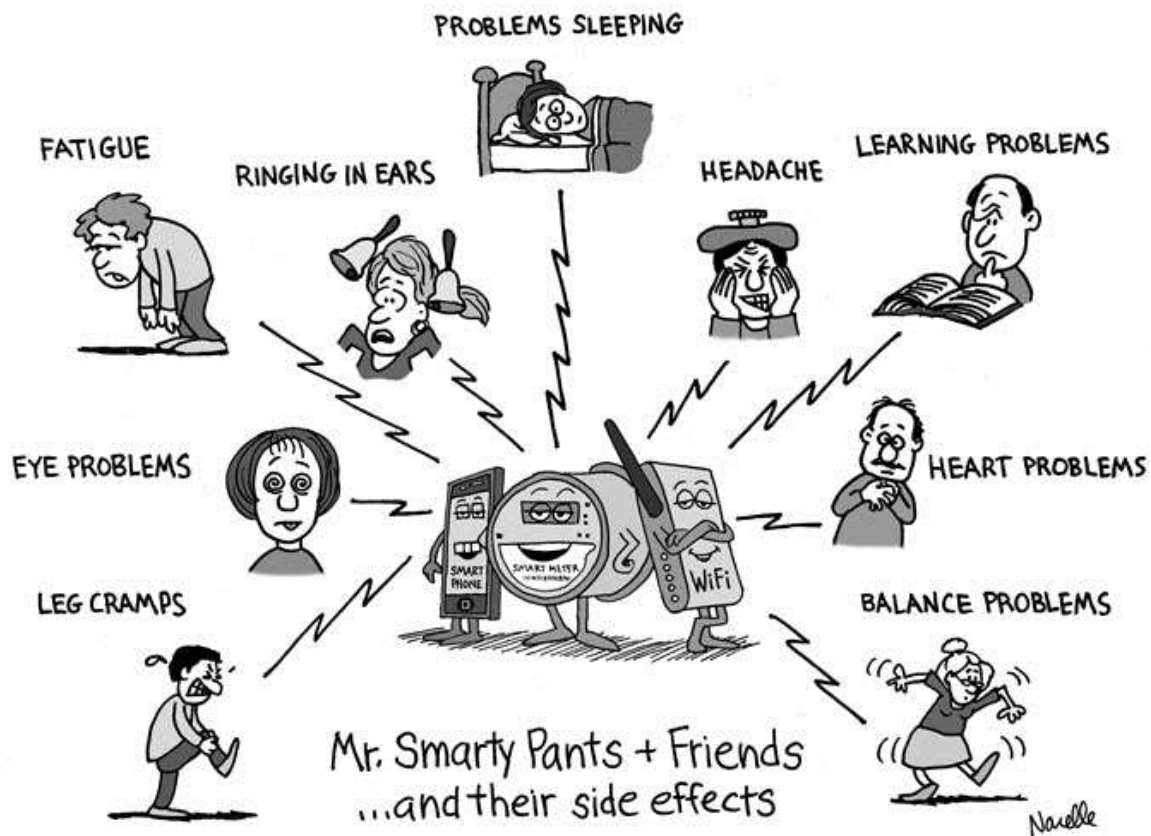

Today, people all over the world are embracing wireless technology as part of their daily lives without ever questioning if it is safe. According to thousands of studies, wireless technology can be harmful, especially to children, but the truth is being covered up. The good news is that information is readily available from people who care about your health, and there are steps that you can take to protect yourself and protect people you care about. The bad news is that the wireless technology industry has lots of money to cover up the truth and keep advancing its agenda. Thus, it's time for individuals to take action to protect their health and the health of others.

[190 Scientists from 39 Nations Appeal to Protect Humans from Electromagnetic Fields and Wireless Technology](#)

Electromagnetic Sensitivity

According to Dr. Joseph Mercola, *"Electromagnetic fields (EMFs) from cell phones, cell phone towers, wireless Internet, power lines, household electrical wiring and more can trigger serious symptoms, including headaches, fatigue and confusion, in people who are electrosensitive. There are a number of factors that influence the degree to which you may be affected by EMFs, and your level of heavy metal toxicity is likely one of them. Heavy metals in your brain also act as micro-antennas, concentrating and increasing reception of EMF radiation. Any kind of metal implants and/or amalgam (silver) tooth fillings will significantly increase reception of microwaves, and the microcurrents from cell phones and other ambient fields."*

From [Smart Meter Health Complaints](#)

Hidden Dangers of Wireless Technology

Thousands of studies have been done that indicate that wireless technology can be dangerous to plants and animals. Here are a few dangers:

- Permanent DNA damage
- Increased risk of cancer
- Damage to the reproductive system
- Heart and circulatory issues
- Weakening of the blood-brain barrier
- Changes to melatonin levels, which could impair sleep
- Thyroid disruption
- Neurological and behavioral problems
- Decreased cognitive function, which could impair learning and work performance
- Forward head posture disorder
- Many other neuro-degenerative diseases and health problems

From [WiFi Radiation – New Device Makes It Visible At Last](#)

Wireless Technology Danger Cover-up

The Bible says, **"The love of money is a root of all kinds of evil."** (1st Timothy 6:10). In solving crime mysteries, it's also known that *"following the money"* is helpful. The truth about the dangers of wireless technology is being covered up by a lobbying group called the CTIA, an advocacy group representing all sectors of the wireless communications industry in the United States. They have lots of money to make sure that the public is not warned about anything that is bad for the profits of the group's members. Although they claim to promote a wonderful *"mobile ecosystem that enable Americans to lead a 21st century connected life,"* they are secretly helping introduce legislation that will make it impossible for victims of wireless technology to sue any of the group members in the future – when the world eventually realizes that wireless technology is like cigarettes – fun to smoke but addictive to many people and deadly to some. They and other groups also work hard to make sure that the truth of this article is kept from general health practitioners and the general public.

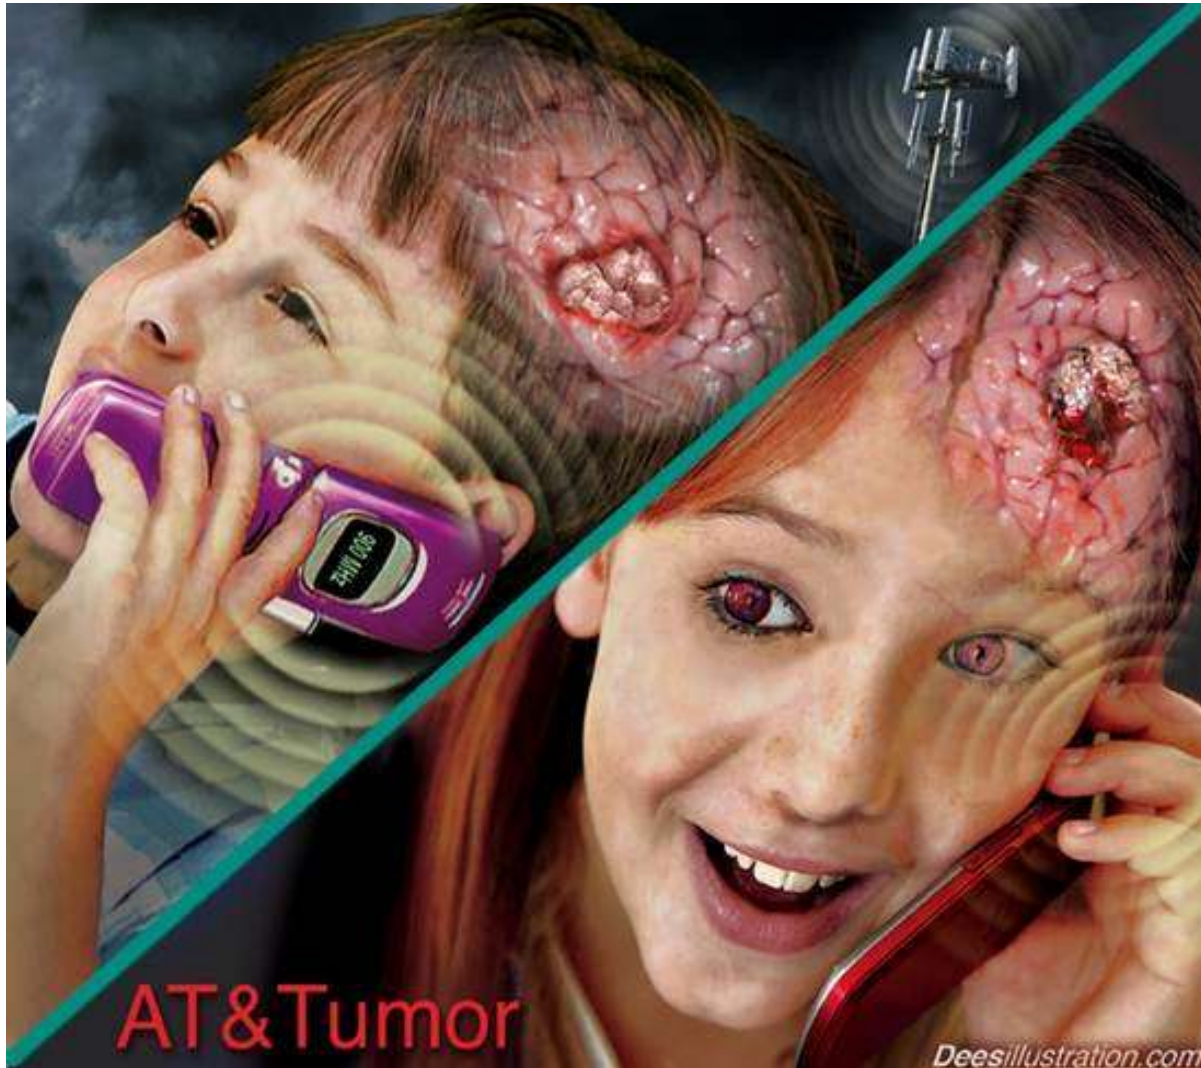

Wi-fry My Brain?

Wi-Fi is convenient, but few people consider the health risks. Wi-Fi transmitters can irradiate female eggs and cause birth defects in their children years later. Wi-Fi is basically like a microwave oven without the enclosure. It heats up cells and can cause all kinds of damage and illness, like headaches, fatigue and mental fog. **Its potential for harm is greatest to unborn babies and young children.** The damage to women's ovaries may not show up for one generation, but when it does, the change will be

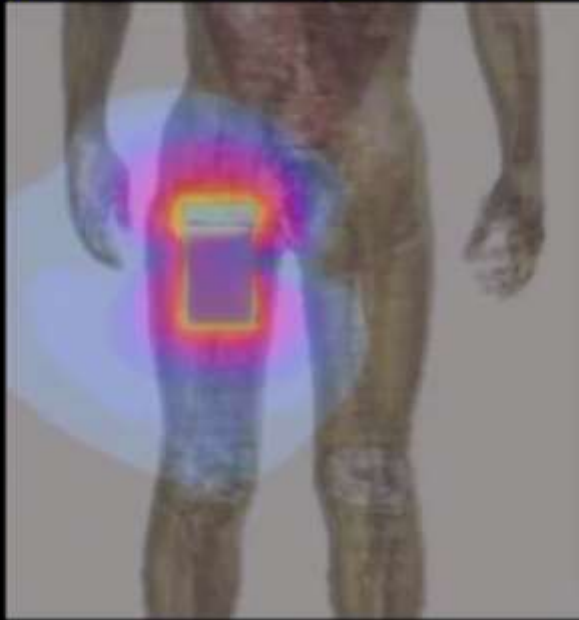

irreversible! And it gets even worse! The new **5G** routers are 12 times worse than 4G, because they emit microwaves with shorter wavelengths; and some countries like the US are planning to install them everywhere for the "Internet of Things" (IoT).

Not-so-smart Phones

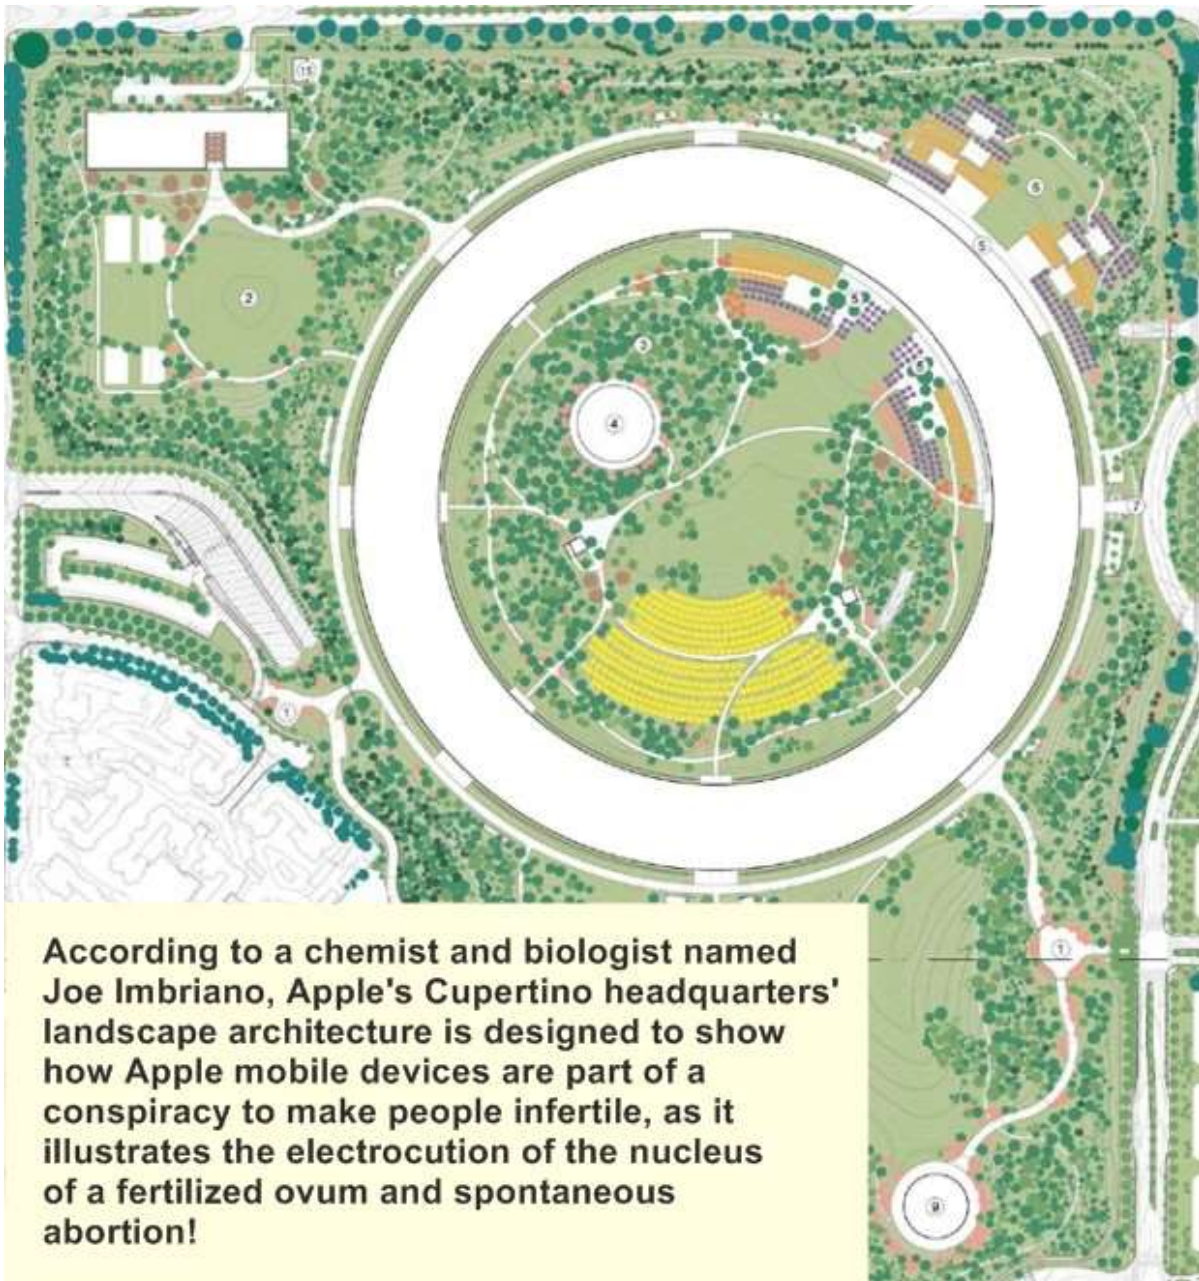

Smartphones emit microwaves that are class 2b carcinogens, like mercury and lead, so it's unwise for anyone to keep them close to their bodies. It's also unwise to give smartphones or tablets to children to play with, since children absorb more electromagnetic radiation than adults do. And it's unwise for anyone to carry smartphones in their pockets, as it could cause them to get cancer in their reproductive organs 5-10 years later.

Mobile Phone in Pocket Exposes Reproductive Organs and Bone Marrow

Infertility Pads

iPads and other tablet devices have even more EMR than smartphones due to the screen size. Parents and teachers should never let small children play with these, as they can damage children's brains and reproductive organs. Adults should also keep them away from their reproductive organs, as they can cause infertility or even cancer. (See [Cell Phone Use Linked to Male Infertility](#) and [Barrie Trower WiFi Report - Humanity At The Brink](#)). Furthermore, there is evidence that technology companies like Apple are actually trying to make people infertile through their devices. (See [Apple 666, The infertility pad \(iPad\), Artemis, Project Inkwell and Agenda 21-an expose with an all star cast](#)).

According to a chemist and biologist named Joe Imbriano, Apple's Cupertino headquarters' landscape architecture is designed to show how Apple mobile devices are part of a conspiracy to make people infertile, as it illustrates the electrocution of the nucleus of a fertilized ovum and spontaneous abortion!

Not-smart Meters

Smart meters are also a big problem, causing health problems to many. If your home has one, then remove it or move elsewhere. If your neighborhood doesn't have one yet, then be glad and warn people about the dangers.

Safety Measures – Easy

(Require only minor inconvenience)

- Always remind yourself that safety comes first, convenience last.
- Avoid carrying your smartphone on your body; try to keep it a minimum of 20cm to 1m away from your body.

- When you don't need to send or receive data or make phone calls, put your mobile device on Airplane Mode, as this reduces radiation more than 90%. (See [How Dangerous Is Your Phone? Headaches, Ears Ringing, Sleepless Nights?](#))
- Insulate your smartphone with a rubber case to minimize microwave radiation transmission into your body.
- Don't use a Bluetooth headset.
- When possible, for phone calls, use a land line instead of a smartphone.
- If you must have Wi-Fi at home, turn off when not watching videos and especially at night during sleep, when you don't need it and when your body repairs its cells.
- Avoid having metal objects on your body, since these transmit EM waves, e.g., watches, bracelets, metal-rimmed glasses, metal wires under women's bras, metal tooth fillings.
- Stay informed and motivated by listening to people who talk about health and the dangers of wireless technology, e.g., Barrie Trower, Susan Clarke, Lena Pu, Joe Imbriano, the National Association for Children and Safe Technology and the Research Center for Wireless Technology

Safety Measures – Moderate

(Require some self-control and mild inconvenience)

- Prioritize digital communication and exercise self-control; be the boss! Don't let your mobile device control you!
- Avoid holding your smartphone for more than six minutes at a time; for phone calls longer than six minutes, use an external headset.
- Don't use Wi-Fi at home; Broadband is much faster; 4G is sufficient for text
- Stay at least 10m away from Wi-Fi transmitters during the day; move your desk if necessary.
- Use a PC emulator for your chat apps, so you can chat via PC and fast broadband instead of with a smartphone and Wi-Fi.
- Go outdoors as often as possible, especially where there are no Wi-Fi signals.
- Get sufficient sleep (6-8 hours per night for most people); use internal clocks rather than alarm clocks.
- Try to sleep before midnight every night.
- Exercise regularly, especially cardiovascular exercise that causes lots of sweating.
- Visit the countryside or wilderness once in a while to know what it feels like to be without Wi-Fi.
- Eat non-GMO and non-processed foods, with lots of fruits and vegetables.
- Avoid using a PC or smartphone two hours before sleeping and one hour after waking up, except for urgent matters.
- If you feel a headache coming, stop and rest; an icepack on the forehead and eyes can help; take a nap if possible.
- Do not purchase Internet-of-things (IoT) devices; use good old common sense and non-IoT devices.

Safety Measures – Difficult

(Require determination, sacrifice and perhaps financial cost)

- Avoid working and living in densely populated urban areas with lots of cell towers and Wi-Fi.
- Hire an electrical engineer to insulate your home against EM waves from the outside.

WiFi in Schools - The Facts

Around the world, an increasing number of governments and authorities have banned or warned against the use of WiFi in schools. Many experts, scientists and doctors are warning the public to take a precautionary approach. This 18-minute video examines the facts.

How Dangerous Is Your Phone? Headaches, Ears Ringing, Sleepless Nights?

In this 5-minute video, an acoustimeter is used to measure the total wireless frequency exposure of a smartphone in a location. The readings are quite lower when Airplane Mode is turned on.

Wireless Radiation & Sensory Processing Disorder (SPD): Making the Connection

A concerned mother explains the dangers of microwave radiation on children

Health Consultant Lena Pu: the Wi-Fi Threat

Lena is a mother of three and personally suffered from health issues that went away when she stopped using WiFi and smartphones and uninstalled her home's smart meter. When her child's school began to install multiple WiFi transmitters, she became an advocate for safety and started exposing the dangers of WiFi. In this radio interview, she explains her mission and shares her message.

The Race To 5G - What You Need To Know!

5G will open the door to even higher levels of human illness and severe disability.

Blue Lights, WiFi, 5G - You Need To Know This!

(37-minute video) LED lighting is a cold white unnatural light and when forced on us at night, is a weapon ladies and gentlemen. This weaponry works synergistically with microwave exposure to destroy your pineal gland. The nocturnal white and blue light energy enters your body through your eyes and nearly completely destroys your melatonin production, thereby destroying your circadian rhythm, destroying your sleep and in the process, your health.

Human fertility is a function of egg quality. Egg quality is a function of melatonin levels. It is where we are folks. LED lighting is an agenda from the pit of hell. The frequency, like in wireless, is everything ladies and gentlemen and has been specifically chosen for this agenda to maximize the impact on human health and fertility.

[Wi-Fi Refugees. Nowhere to run: Electrosensitive people try to escape wireless technology](#)

(52-minute video) Although these people are sick, their illness is difficult to diagnose, and it's even harder to convince others that it actually exists. Their symptoms include cluster headaches, nausea, chronic fatigue, a burning sensation on the skin, and a metallic taste in the mouth. Sufferers claim the cause is wireless technology. There's no known cure, and the only way to alleviate the symptoms seems to be to distance themselves from electronic devices and the influence of omnipresent wireless networks

Convenient technology can potentially be harmful in the long term to our bodies, our relationships and even our souls! Are we becoming slaves to convenient technology? Have technology and convenience become idols? What can we do to avoid eternal regret from getting addicted to technology and convenience?

[20,000 5G satellites to be launched sending DANGEROUS BEAMS of intense microwave radiation ACROSS THE WORLD](#)

Each **5G** product will also have multiple phased array antennas which will be used to create a powerful beam of radiation back to the **5G** devices mounted on electrical utility poles or toward a specific satellite in space. These beams of radiation will also need to be strong enough to pass through walls and human flesh such as a hand or head to reach the intended destination. This means that if you are in a crowded location, such as an airport or on a train, there will be hundreds if not thousands of invisible beams of radiation flying through the environment at the speed of light.

[Will 5G Cell Phone Technology Lead To Dramatic Population Reduction As Large Numbers Of Men Become Sterile?](#)

"Putting in tens of millions of **5G** antennae without a single biological test of safety has got to be about the stupidest idea anyone has had in the history of the world." - Dr. Martin L. Pall, a PhD and Professor Emeritus of Biochemistry and Basic Medical Sciences at Washington State University. But despite the objections of Dr. Pall and countless other scientists, we are going to do it anyway.

[The Hidden Military Use of 5G Technology](#)

One reason that **5G** for smartphones is being pushed forward is the possibility of getting

people to participate in virtual war games of impressive realism in direct contact with players from all over the world. In this way, without realizing it, the players will be preparing the world for real war. They are considered as a strategy to eliminate millions of people. 97% of the public has a cell phone. 85% have a smart phone. 11% have a cell phone that is not a smart phone. What does that tell you about how any government could wipe out its citizens?

It is generally accepted now that the so-called virus SARS-COV-2 has not been isolated. But unfortunately, virologists and medical experts still believe in it and make false claims. They have been playing around with Coronaviruses for twenty-five years Unsuccessfully.

Their view on virus existence and/or isolation is described as follows (from the Reuters Fact Check team – [link](#)):

“There are numerous examples of scientists isolating SARS-CoV-2, the virus that causes COVID -19, and sequencing its genome.

The argument about purification relates to 19th Century microbiological theory that does not apply to viruses.

The novel coronavirus has been proven to exist and has caused millions of deaths worldwide.”

If one reads the sentence carefully, “*The argument about purification relates to 19th Century microbiological theory that does not apply to viruses,*” it means they do not believe in standard (old fashion) purification of things and **do not have the (purified) virus**. No lab in the world has proved the Covid-19 exists through the method referred to as the “Gold Standard” of confirming the existence of a virus.

That is, there is no isolated virus available. Therefore, the non-existence of the virus has been accepted indirectly.

On the other hand, experts claim that the virus’s existence (“*novel coronavirus has been proven to exist*”) is based on the sequencing of virus RNA.

What is sequencing?

“The genome (i.e., RNA) sequence of a virus is the sequence or order of bases or letters (representing nucleotides) that makes up a virus’s genetic material or its genome.

If you were to write down the genome sequence of a particular coronavirus, it would be a series of about 30,000 letters.” ([link](#)). If you know anything about genetics, the first thing you learn about sequencing it is that it is an impossible task to achieve, without huge expense.

RNAs, DNAs, genes, genomes, etc., are represented by four chemical compounds (nucleotides, or bases); adenine, cytosine, guanine, and thymine (or uracil). They are abbreviated by four alphabet letters ACGT (or ACGU).

Sequencing means learning or determining (experimentally) the exact sequence (order) of the building blocks (the letters) that make up all RNA molecules. It means one has to have an RNA, and its sequence is determined by chopping (the nucleotides) piece by piece.

However, as described above, **the virus is not available, and its RNA cannot be available either.**

Therefore, sequencing is not possible.

Hence, sequencing of the virus or its RNA has never been done.

Saying it otherwise is incorrect and deceptive.

What is being done is assembling/building short nucleic acid chains (opposite of sequencing) based on a pre-conceived template (called primers).

The obtained short chains are then extended to longer chains using **computer software and modeling**, naming them as RNAs of the viruses or their variants.

The technical name of this process is PCR or Polymerase Chain Reaction. It is like, one is given some beads of four colors and asked to build imaginary necklaces. As I recall, Covid-19 was based upon a single strand of 156-pairs of the 30,000-pairs of genes.

Then, the experts assemble necklaces, name them viruses or variants, and call this assembly step (incorrectly) sequencing!

Therefore, the claims of RNA sequencing are scientifically inaccurate, and actual sequencing has never been done. This overlooked fact in the public domain was confirmed by the public health agencies. Over 100 countries and independent labs requested from the CDC “slide” samples and were told “*they do not exist!*” If you are a microbiologist in any country of the world you would want to see a “slide” sample in order to know what you are looking for in your population.

To make matters worse, there is the issue that people’s DNA can also be used to eliminate people. Chances are most of you would not be aware of this. But as recent as this past week speaking at the Aspen Security Forum of Friday, October 21st, U.S. Representative Jason Crow of Colorado warned Americans to not be so cavalier about sharing their DNA with private companies due to the coming of the new type of weapon.

"You can actually take someone's DNA, take, you know, their medical profile and you can target a biological weapon that will kill that person or take them off the battlefield or make them inoperable," Crow said.

The congressman said the development of the weapons is worrisome given the popularity of DNA testing services, where people willingly share their genetic mapping with businesses to gain insight on their genealogy and health.

"You can't have a discussion about this without talking about privacy and the protection of commercial data because expectations of privacy have degraded over the last 20 years," the Democratic lawmaker said.

"Young folks actually have very little expectation of privacy, that's what the polling and the data show."

Crow, a former Army Ranger who served three tours of duty in Iraq and Afghanistan, continued: *"People will very rapidly spit into a cup and send it to '23andMe' and get really interesting data about their background."*

'23andMe' has repeatedly stated that it does not sell off customers' private information, but the DNA company is one of many that have provided information to police upon request. Many of these DNA services are owned by Chinese sources, either in whole or part.

U.S. Senator Joni Ernst of Iowa, a member of the Senate Armed Services Committee, said the U.S. rivals could use such DNA bio-weapons to target food supplies on a vast scale.

Ernst warned that biological weapons could be used to target specific animals that citizens, troops or cities depend on, bringing about scarcity and food insecurity to weaken people.

"Food insecurity drives a lot of other insecurities around the globe," Ernst said.

"There's a number of ways we can look at biological weapons and the need to make sure not only are we securing human beings, but then also the food that will sustain us."

Earlier this week, the *'Washington Examiner'* reported on just how easy it could be for privately-owned databases to be used to develop bioweapons such as the ones touted by Crow.

The publication explained how DNA belonging to a target – or the close relative of a target – could be stolen and used to form a biological weapon effective against that person only. Using Synthetic biology and CRISPR it can be deployed through **5G** wireless energy, even late versions of 4G.

That technology could lead to highly-targeted assassination programs, and also make it much harder for killers to be tracked down.

Similar technology could be deployed against U.S. agriculture by designing weapons which target only a certain breed of farm animal, or crop.

“And guess what? Their DNA is now owned by a private company. It can be sold off with very little intellectual property protection or privacy protection and we don’t have legal and regulatory regimes to deal with that.”

Dr. Joel Moskowitz: Cellphone radiation is harmful, but few want to believe it is.
Writing in the ‘Berkeley News’ on July 1st, 2021.

For more than a decade, Joel Moskowitz, a researcher in the School of Public Health at UC Berkeley and director of Berkeley’s Center for Family and Community Health, has been on a quest to prove that radiation from cellphones is unsafe. But, he said, most people don’t want to hear it.

In the next segment of this series I will pick up with Dr. Joel Moskowitz’s knowledge about this expose of **5G** and its risks and danger.

Blessings,

Pastor Bob, EvanTeachr@aol.com
