

Covid-19 Con Job

Satanic Plan-Demic/Scam-Demic

Part 4

In my ongoing research on Covid-19, 5G technologies, EMF damage to life, and related physical health issues that are connected, I came across an interesting statistic. EIGHTY DEAD BIO SCIENTISTS, --- Weaponized Bio warfare was their specialty. They all worked on an "Above Top Secret program that did research on bio-weapons and delivery systems. When I came across this information, I almost thought it was reminiscent of the "Clinton Body Count" from years ago. It seems highly suspicious for sure, and suggests that being a microbiologist, biochemist, biologist, virologist, is a risky career. And, interestingly there seems to be a connection with Dr. Anthony Fauci of the NIAID.

The Mystery Of The Dead Scientists Coincidence Or Conspiracy?

By Ian Gurney

7-20-3

It is a story worthy of a major conspiracy theory, the script for a James Bond movie, or a blueprint for a contrived episode of "The X Files". Except the facts surrounding this story are just that. Facts. The Truth. At least twelve, and perhaps as many as twenty eminent scientists, leaders in their particular field of scientific research, dead in the last few months, and a bizarre connection between one of the scientists and the mystery surrounding the death by Anthrax inhalation of a sixty one year old female hospital worker in New York. Sounds far fetched? Read on.

Since November last year several world-acclaimed scientific researchers, specializing in infectious diseases and biological agents such as Smallpox and Anthrax, as well as DNA sequencing, environmental research and microbiology have died, many in unusual circumstances.

First, on November 12th, was Dr. Benito Que, a cell biologist working on infectious diseases like HIV, who was found comatose outside his laboratory at the Miami Medical School. He later died. Police say the attack was possibly the result of a mugging. The Miami Herald reported that:

"The incident, whatever it may have been, occurred on Monday afternoon as the scientist left his job at University of Miami's School of Medicine. He headed for his car, a white Ford Explorer parked on Northwest 10th Avenue. The word among his friends is that four men armed with a baseball bat attacked him at his car."

On November 16th, within of week of Dr. Que's assault, Dr. Don C Wiley, one of the

United States foremost infectious disease researchers was declared missing. Associated Press wrote:

"His rental car was found with a full tank of petrol and the keys in the ignition. His disappearance looked like a suicide, but according to colleagues and Dr. Wiley's family, the Harvard Scientist associated with the Howard Hughes Medical Institute would never commit suicide. Associates who attended the St. Jude's Children Research Advisory Dinner with Dr. Wiley, just hours before he disappeared, said that he was in good spirits and not depressed. He was last seen at the banquet at the Peabody Hotel in downtown Memphis the night he vanished. Those who saw him last say he showed no signs of a man contemplating his own death."

Wiley left the hotel around midnight. The bridge where his car was found is only a five-minute drive away and in the wrong direction from where he was staying, leaving authorities with a four-hour, unexplained gap until his vehicle was found. Memphis police were exploring several theories involving suicide, robbery and murder.

On December 21st Reuters issued the following report:

"The body of a Harvard scientist missing for more than a month since his rental car was left parked on a bridge over the Mississippi River has been found downstream. Workers at a hydro-electric plant in Louisiana found the body of Dr. Don Wiley on Thursday, about 300 miles south of Memphis where the molecular biologist was last seen on Nov. 16. Authorities have yet to determine the cause of death, Memphis police said."

Dr. Wiley was an expert on how the human immune system fights off infections and had recently investigated such dangerous viruses as AIDS, Ebola, herpes and influenza.

From the United States, the story moves to England. On November 23rd, Dr. Vladimir Pasechnik, a former microbiologist for Biopreparat, the Soviet biological-weapons production facility was found dead. The Times provided an obituary for Dr. Pasechnik, and said:

"The defection to Britain in 1989 of Vladimir Pasechnik revealed to the West for the first time the colossal scale of the Soviet Union's clandestine biological warfare programme. His revelations about the scale of the Soviet Union's production of such biological agents as anthrax, plague, tularaemia and smallpox provided an inside account of one of the best kept secrets of the Cold War. After his defection he worked for ten years at the UK Department of Health's Centre for Applied Microbiology Research before forming his own company, Regma Biotechnics, to work on therapies for cancer, neurological diseases, tuberculosis and other infectious diseases. In the last few weeks of his life he had put his research on anthrax at the disposal of the Government, in the light of the threat from

bioterrorism." Colleagues of Dr. Pasechnik say he died of a stroke.

Back to the United States, and on December 10th, Dr. Robert M. Schwartz was found murdered in Leesburg, Virginia. Dr. Schwartz was a well-known DNA sequencing researcher. He founded the Virginia Biotechnology Association where he worked on DNA sequencing for 15 years. On Wednesday, December 12th the Washington Post reported:

"A well-known biophysicist, who was one of the leading researchers on DNA sequencing analysis, was found slain in his rural Loudoun County home after co-workers became concerned when he didn't arrive at work as expected. Robert M. Schwartz, 57, a founding member of the Virginia Biotechnology Association, was found dead in the secluded fieldstone farmhouse southwest of Leesburg where he lived alone. Loudoun sheriff's officials said it appeared that Schwartz had been stabbed." An adult and two teen-agers have been arrested in the case. The three are said to have a fascination with both swords and Satanism.

And so to Victoria State, Australia, where, on December 14th, 2001 a skilled microbiologist was killed at the Commonwealth Scientific and Industrial Research Organisation's animal diseases facility in Geelong, Australia. This is the same organisation that, as the journal Nature announced in January 2000:

"Australian scientists, Dr Ron Jackson and Dr Ian Ramshaw, accidentally created an astonishingly virulent strain of mousepox, a cousin of smallpox, among laboratory mice. They realised that if similar genetic manipulation was carried out on smallpox, an unstoppable killer could be unleashed."

The microbiologist who died was Set Van Nguyen, a Vietnamese immigrant who had worked at the facility for 15 years. Victoria Police said:

"Set Van Nguyen, 44, appeared to have died after entering an airlock into a storage laboratory filled with nitrogen. His body was found when his wife became worried after he failed to return from work. He was killed after entering a low temperature storage area where biological samples were kept. He did not know the room was full of deadly gas which had leaked from a liquid nitrogen cooling system. Unable to breathe, Mr. Nguyen collapsed and died."

Now for the intriguing part of this story. On Friday, November 2nd, the Washington Post reported:

"Officials are now scrambling to determine how a quiet, 61-year-old Vietnamese immigrant, riding the subway each day to and from her job in a hospital stockroom, was exposed to the deadly anthrax spores that killed her this week. They worry because there is no obvious connection to the factors common to earlier anthrax exposures and deaths: no clear link to the mail or to the media."

The name of this quiet 61 year old Vietnamese hospital worker was Kathy Nguyen.

And so to the New Year, and still the scientists keep dying. On February 9th. the Russian daily Pravda reported that:

"The head of the microbiology sub-faculty of the Russian State Medical University, Victor Korshunov has been killed. The body of the dead professor, who had head injuries, was found on Friday 8th. February, in the entrance of the house in Academician Bakulev Street, Moscow, where the 56-year-old scientist lived." Pravda went on to reveal that: "It was the third death of a scientist within a few weeks. In January, the Russian Academy of Science lost two scientists, both well known around the world. Academician Ivan Glebov died as a result of a bandit attack in St Petersburg and corresponding Member of the Academy of Science Alexi Brushlinski was killed in Moscow."

Exactly a week later, on February 16th. 'The Times' ran the following article:

"Detectives were last night trying to unravel the circumstances in which a leading university research scientist was found dead at his blood-spattered and apparently ransacked home. The body of Ian Langford, 40, a senior Fellow at the University of East Anglia's Centre for Social and Economic Research on the Global Environment, was discovered on Monday night by police and ambulancemen. The body was naked from the waist down and partly wedged under a chair. It is understood that doors to the terraced house were locked. A post-mortem examination failed to establish how Dr Langford, who lived alone in the house in Norwich, died."

Back to the west coast of the United States, where, on February 28th. San Francisco's ' reported that:

"Dr. Tanya Holzmayer, a pioneering scientist, was surprised Wednesday night to find a Domino's Pizza deliveryman at the front door of her Mountain View home. Moments later, a former colleague appeared out of the dark, shot her dead and ran off."

Dr. Holzmayer was a Russian born genomic scientist who had co-invented a tool that has helped find hundreds of molecular targets to combat cancer and HIV. Holzmayer and her family came to the United States in 1989. Until December, Holzmayer had served a four year tenure as senior vice president of genomics for PPD Discovery, a division of PPD Inc. of Wilmington, North Carolina. Her killer, said 'Mercury News', was Chinese immigrant Guyang Huang, a former colleague who began working as the director of molecular biology and bioinformatics with PPD Discovery in early 2000. Mercury News continued:

"Huang appeared from behind the deliveryman. He shot Holzmayer several times at close range in the chest and head. As Holzmayer fell in her doorway, Huang ran to a Ford Explorer and drove away. Less than an hour after the shooting, Huang called

his wife, according to Foster City Police Capt. Craig Courtin. He told her about the shooting and that he was going to kill himself, then he hung up. Huang's wife called the emergency services and Foster City police used search dogs to comb the area.. They ran into a jogger who had seen Huang's body lying off the walkway that locals call "The Levee." He had fired a single bullet into his head, according to Robert Foucrault, San Mateo County's acting coroner. Police said that at this stage in their investigations there appeared to be no motive for the murder."

Still the deaths continue. On March 25th. 2002 9News.com - part of K*USA TV in Denver, reported that:

"Denver car dealer Kent Rickenbaugh, his wife, Caroline, and their son Bart were killed Sunday in a plane crash near Centennial Airport. Pilot Dr. Steven Mostow also died. Dr. Mostow, 63, was one of the country's leading infectious disease experts and was Associate Dean at the University of Colorado Health Sciences Center. Mostow was a crusader for better health, an early advocate for widespread flu vaccinations and more recently an expert on the threat of bioterrorism. The plane was headed for Centennial Airport from Gunnison Airport when Dr. Mostow reported engine trouble around 4:30 p.m., Federal Aviation Administration spokesman Jerry Snyder said. National Transportation Safety Board investigators said "Weather did not appear to be a factor in the crash",

Back to England, and on March 27th. 'The Times' carried an obituary for yet another leading microbiologist, stating that:

"David Wynn-Williams, an award-winning microbiologist died when he was struck by a vehicle while out jogging. In 2000 he was appointed leader of the Antarctic Astrobiology Project, which explores the effects of environmental stress at the limits of life on Earth. Wynn-Williams had assessed the capability of microbes to adapt to environmental extremes, including the bombardment of ultraviolet rays and global warming. This drew Wynn-Williams into collaboration with the Nasa Ames Research Centre, the Johnson Space Centre and Lunar & Planetary Institute, Houston, and Montana State University. A man of boundless physical as well as intellectual energy, Wynn-Williams generated a constant flow of ideas, which entranced both his contemporaries and the young. He was killed in a road accident while out jogging near his Cambridge home."

So far then, twelve dead scientists, at least eight or nine of whom appear to have died in "unusual" circumstances. Prior to these deaths, on October 4th, a commercial jetliner travelling from Israel to Novosibirsk, Siberia was shot down over the Black Sea by an "errant" Ukrainian surface-to-air missile, killing all on board. The missile was over 100 miles off-course. According to several press reports, the plane is believed by many in Israel to have had as many as five passengers on board who were microbiologists. Both Israel and Novosibirsk are homes for cutting-edge microbiological research. Novosibirsk is known as the scientific capital of Siberia, and home to over 50 research facilities and 13 full universities for a

population of only 2.5 million people.

At the time of the Black Sea crash, Israeli journalists reported that three Israeli microbiologists had, on November 24th, been on board a Swissair flight from Berlin to Zurich that crashed on its landing approach. Of the 33 persons on board, 24 were killed, including the head of the haematology department at Israel's Ichilov Hospital, and the directors of the Tel Aviv Public Health Department and the Hebrew University School of Medicine. They were the only Israelis on the flight. The names of those killed, as reported in a subsequent Israeli news story, were Avishai Berkman, Amiramp Eldor and Yaacov Matzner.

In light of the deaths of these microbiologists, it is interesting to take a look at a similar set of circumstances that occurred fourteen years ago in the United Kingdom. Once again it involves the deaths of a number of scientists, some in "unusual" circumstances. The report below was taken from *'The Independent'* newspaper of August 26, 1988.

The police said it was suicide, and no doubt they were right. Ex-Brigadier Peter Ferry, a marketing manager at Marconi's Command and Control Systems centre at Frimley, Surrey, had apparently killed himself by inserting power main electric wires into his mouth and then turning on the power.

The method chosen was perhaps marginally more grisly than in the case of several other Marconi employees. In 1986, for example, Ashad Sharif, a computer analyst who worked for Marconi Defence Systems in Stanmore, Middlesex, tied one end of a rope around his neck, another to a tree, and put his car into gear. Two months earlier, the body of Vimal Dajibhai, a software engineer responsible for checking the guidance systems of Tigerfish torpedos for Marconi Underwater Systems, was found under Clifton suspension bridge at Bristol.

In March 1987, David Sands, a project manager working on secret satellite radar at Marconi's sister company Easams, in Camberley, drove up a slip road on his way to work and into a cafe at an estimated 80mph. A year later, Trevor Knight, a computer engineer at Marconi's space and defence base in Stanmore, died in his fume-filled car at his home in Hertfordshire. Earlier, two other Marconi employees, Victor Moore, a design engineer, and Roger Hill, a draughtsman, had killed themselves, both seemingly as a result of work pressures.

There have been at least half a dozen more untoward deaths among defence scientists and others working in the defence field. Marconi is not alone, but it is well in the lead. The best efforts of investigative journalists have failed to establish a link either between the various deaths or between the deaths of the Marconi staff and the Ministry of Defence inquiry, now two years old, into some £3billion worth of defence contracts awarded to GEC-Marconi. "

--The Independent August 26, 1988.

Interestingly, Marconi was recently declared virtually bankrupt after its shares fell below "junk" status on the UK stock exchange. Both the chairman and C.E.O. resigned and a great many employees have lost their jobs and pensions as the share price fell from a twelve month high of £4:45 to only 5 pence. Marconi, once a major player in the defence industry had, over the last few years, moved into the Telecoms sector and suffered when the downturn in technology and telecom stocks came along last year. A company once worth billions is now worthless, a situation that is somewhat similar to Enron.

Whether these recent deaths are purely coincidence or part of some sinister plot, the reasons for which can only be guessed at, remains unclear. What is clear though, is that being a scientist these days can be a dangerous occupation.

Coronavirus Was Eerily Predicted in a 1981 Novel

The 1981 novel *'The Eyes of Darkness'* by Dean Koontz talks about a deadly virus used as a biological weapon named Wuhan-400. The epicenter of real-life Coronavirus is ... Wuhan, China. And the eerie similarities do not end there.

Dean Koontz is a prolific author who wrote 105 novels, including several NY Times Best Sellers. He sold over 450 million copies worldwide and 17 books were adapted for cinema.

Throughout his career, Koontz wrote under several pen names including David Axton, Deanna Dwyer, K.R Dwyer, Brian Coffey, and Leigh Nichols. It is with this last pen name that Koontz wrote the novel *'The Eyes of Darkness'* in 1981 – a “suspense thriller” that is causing even more “suspense thriller” nearly 40 years after its original publication.

The first edition of *'The Eyes of Darkness'*.

The reason for the resurgence in popularity for this forgotten novel? It appears to have predicted with chilling accuracy the outbreak of Coronavirus from Wuhan, China.

The plot revolves around a mother who attempts to find out what happened to her son after he mysteriously disappeared on a camping trip. It turns out that the boy is held in China – more specifically in Wuhan, the site of a deadly virus outbreak. Here is the passage that is raising eyebrows across the web:

“I’m not interested in the philosophy or morality of biological warfare,” Tina said. “Right now I just want to know how the hell Danny wound up in this place.”

“To understand that,” Dombey said, “you have to go back twenty months.’ It was around then that a Chinese scientist named Li Chen defected to the United States, carrying a diskette record of China’s most important and dangerous new biological weapon in a decade. They call the stuff ‘Wuhan-400’ because it was developed at their RDNA labs

outside of the city of Wuhan, and it was the four-hundredth viable strain of man-made microorganisms created at that research center.

“Wuhan-400 is a perfect weapon. It afflicts only human beings. No other living creature can carry it. And like syphilis, Wuhan-400 can’t survive outside a living human body for longer than a minute, which means it can’t permanently contaminate objects or entire places the way anthrax and other virulent microorganisms can. And when the host expires, the Wuhan-400 within him perishes a short while later, as soon as the temperature of the corpse drops below eighty-six degrees Fahrenheit. Do you see the advantage of all this?”

Tina was too busy with Danny to think about what Carl Dombey had said, but Elliot knew what the scientist meant. *“If I understand you, the Chinese could use Wuhan-400 to wipe out a city or a country, and then there wouldn’t be any need for them to conduct a tricky and expensive decontamination before they moved in and took over the conquered territory.”*

“Exactly,” Dombey said. “And Wuhan-400 has other, equally important advantages over most biological agents. For one thing, you can become an infectious carrier only four hours after coming into contact with the virus. That’s an incredibly short incubation period. Once infected, no one lives more than twenty-four hours. Most die in twelve. It’s worse than the Ebola virus in Africa—infininitely worse. Wuhan-400’s kill-rate is one hundred percent. No one is supposed to survive. The Chinese tested it on God knows how many political prisoners. They were never able to find an antibody or an antibiotic that was effective against it. The virus migrates to the brain stem, and there it begins secreting a toxin that literally eats away brain tissue like battery acid dissolving cheesecloth. It destroys the part of the brain that controls all of the body’s automatic functions. The victim simply ceases to have a pulse, functioning organs, or any urge to breathe.”

“And that’s the disease Danny survived,” Elliot said.

“Yes,” Dombey said. “As far as we know, he’s the only one who ever has.”

Tina had pulled the blanket off the bed and folded it in half, so she could wrap Danny in it for the trip out to the Explorer. Now she looked up from the task of bundling the child, and she said to Dombey, *“But why was he infected in the first place?”*

“It was an accident,” Dombey said.

“I’ve heard that one before.”

“This time it’s true,” Dombey said. “After Li Chen defected with all the data on Wuhan-400, he was brought here. We immediately began working with him, trying to engineer an exact duplicate of the virus. In relatively short order we accomplished that. Then we began to study the bug, searching for a handle on it that the Chinese had overlooked.”

“And someone got careless,” Elliot said.

In this passage, the virus is called Wuhan-400 because it was developed at their “RDNA labs outside of the city of Wuhan”. As you might know, the epicenter of the actual Coronavirus outbreak is in Wuhan.

Another strange fact: The actual Wuhan Institute of Virology, which houses China's only level four biosafety laboratory (the highest-level classification of labs that study the deadliest viruses) is just 32km from Wuhan. The science journal 'Nature' covered the opening of his lab in 2017 warned of safety risks in a culture where "hierarchy trumps an open culture".

Therefore, it doesn't take a widely imaginative mind to speculate that the virus could have "escaped" from this facility the same way it did in the novel.

Another strange fact: The 2017 French comic *Asterix and the Chariot Race* featured a masked villain named ... Coronavirus.

While some believe this is all a strange coincidence, others see it as a classic case of "predictive programming". The entire situation is reminiscent of the 1898 novella *Futility* which was about a huge ocean liner called Titan which sank in the North Atlantic after hitting an iceberg. Fourteen years later, a huge ocean liner called Titanic sank in the North Atlantic after hitting an iceberg.

All of this is so surreal as we look at these scientists who for some unknown reason share a common denominator with each other, that being their field of research work. Twenty years ago, I vaguely recall some of these individuals who died mysteriously under suspicious circumstances.

I can tell how long that I have been following this story just by victim #27 in the following list of 80 microbiologists who all died mysteriously. I recall the report on Dr. Don Wiley in 2001 whose car was found on a bridge outside Memphis, TN. In 2020 the list has grown

to over a hundred, with no known link other than they were microbiologists and their specific areas of research.

Why are these 80 scientists now dead? Why are they all microbiologists?
Recap: Full list of 80 dead scientists, with photos and shocking details
By Erin Elizabeth of Health Nut News

This story is completely separate from our [unintended holistic doctor death series, which you can find here](#). No, this is a separate list- not compiled by us but by diligent researchers (link at bottom)- who we thank for sharing this information.

Foster Gamble was the first to alert us about this; we only wish that full investigations had been done into both sets of deaths as we believe it at least warrants an investigation as to whether all, some or none are, in fact, connected.

Died 2006

#80: **Lee Jong-woo, age 61.** **Died: May 22, 2006** after suffering a blood clot on the brain. Lee was spearheading the organization's fight against global threats from bird flu, AIDS and other infectious diseases. WHO director-general since 2003, Lee was his country's top international official. The affable South Korean, who liked to lighten his press conferences with jokes, was a keen sportsman with no history of ill-health, according to officials.

Died 2005

#79: Leonid Strachunsky. Died: June 8, 2005 after being hit on the head with a champagne bottle. Strachunsky specialized in creating microbes resistant to biological weapons. Strachunsky was found dead in his hotel room in Moscow, where he had come from Smolensk in route to the United States. Investigators are looking for a connection between the murder of this leading bio weapons researcher and the hepatitis outbreak in Tver, Russia.

#78: **Robert J. Lull, age 66. Died: May 19, 2005** of multiple stab wounds. Despite his missing car and apparent credit card theft, homicide Inspector Holly Pera said investigators aren't convinced that robbery was the sole motive for Lull's killing. She said a robber would typically have taken more valuables

from Lull's home than what the killer left with. Lull had been chief of nuclear medicine at San Francisco General Hospital since 1990 and served as a radiology professor at UCSF. He was past president of the American College of Nuclear Physicians and the San Francisco Medical Society and served as editor of the medical society's journal, San Francisco Medicine, from 1997 to 1999. Lee Lull said her former husband was a proponent of nuclear power and loved to debate his political positions with others.

#77: Todd Kauppila, age 41. Died: May 8, 2005 of hemorrhagic pancreatitis at the Los Alamos hospital, according to the state medical examiner's office. Picture of him was not available to due secret nature of his work. This is his funeral picture. His death came two days after Kauppila publicly rejoiced over news that the lab's director was leaving. Kauppila was fired by director Pete Nanos on Sept. 23, 2004 following a security scandal. Kauppila said he was fired because he did not immediately return from a family vacation during a lab investigation into two classified computer disks that were thought to be missing. The apparent security breach forced Nanos to shut down the lab for several weeks. Kauppila claimed he was made a scapegoat over the disks, which investigators concluded never existed. The mistake was blamed on a clerical error. After he was fired, Kauppila accepted a job as a contractor at Bechtel Nevada Corp., a research company that works with Los Alamos and other national laboratories. He was also working on a new Scatter Reduction Grids in Megavolt Radiography focused on metal plates or crossed grids to act to stop the scattered radiation while allowing the unscattered or direct rays to pass through with other scientists: Scott Watson (LANL, DX-3), Chuck Lebeda (LANL, XTA), Alan Tubb (LANL, DX-8), and Mike Appleby (Tecomet Thermo Electron Corp.)

#76: David Banks, age 55. Died: May 8, 2005. Banks, based in North Queensland, died in an airplane crash, along with 14 others. He was known as an Agro Genius inventing the mosquito trap used for cattle. Banks was the principal scientist with quarantine authority, Biosecurity Australia, and heavily involved in protecting Australians from unwanted diseases and pests. Most of Dr Banks' work involved preventing potentially devastating diseases making their way into Australia. He had been through Indonesia looking at the potential for foot and mouth disease to

spread through the archipelago and into Australia. Other diseases he had fought to keep out of Australian livestock herds and fruit orchards include classical swine fever, Nipah virus and Japanese encephalitis.

#75: **Dr. Douglas James Passaro, age 43. Died April 18, 2005** from unknown cause in Oak Park, Illinois. Dr. Passaro was a brilliant epidemiologist who wanted to unlock the secrets of a spiral-shaped bacteria that causes stomach disease. He was a professor who challenged his students with real-life exercises in bioterrorism. He was married to Dr. Sherry Nordstrom..

#74: **Geetha Angara, age 43. Died: February 8, 2005.** This formerly missing chemist was found in a Totowa, New Jersey water treatment plant's tank. Angara, 43, of Holmdel, was last seen on the night of Feb. 8 doing water quality tests at the Passaic Valley Water Commission plant in Totowa, where she worked for 12 years. Divers found her body in a 35-foot-deep sump opening at the bottom of one of the emptied tanks. Investigators are treating Angara's death as a possible homicide. Angara, a senior chemist with a doctorate from New York University, was married and mother of three.

#73: Jeong H. Im, age 72. Died: January 7, 2005. Korean Jeong H. Im, died of multiple stab wounds to the chest before firefighters found in his body in the trunk of a burning car on the third level of the Maryland Avenue Garage. A retired research assistant professor at the University of Missouri – Columbia and primarily a protein chemist, MUPD with the assistance of the Columbia Police Department and Columbia Fire Department are conducting a death investigation of the incident. A “person of interest” described as a male 6’–6’2” wearing some type of mask possible a painters mask or drywall type mask was seen in the area of the Maryland Avenue Garage. Dr. Im was primarily a protein chemist and he was a researcher in the field.

Died in 2004

#72: Darwin Kenneth Vest, born April 22, 1951, was an internationally renowned entomologist, expert on hobo spiders and other poisonous spiders and snakes. Darwin disappeared in the early morning hours of June 3, 1999 while walking in downtown Idaho Falls, Idaho (USA). The family believes foul play was involved in his disappearance. A celebration of Darwin’s life was held in Idaho Falls and Moscow on the one-year anniversary of his disappearance. The services included displays of Darwin’s work and thank you letters from school children and teachers. Memories of Darwin were shared by at least a dozen speakers from around the world and concluded with the placing of roses and a memorial wreath in the Snake River. A candlelight vigil was also held that evening on the banks of the Snake River.

Darwin was declared legally dead the first week of March 2004 and now the family is in the process of obtaining restraining orders against several companies who saw fit to use his name and photos without permission. His brother David is legal conservator of the estate and his sister Rebecca is handling issues related to Eagle Rock Research and ongoing research projects.

Media help in locating Darwin is welcome. Continuing efforts to solve this mystery include recent DNA sampling. Stories about his disappearance continue to appear

throughout the world. Issues surrounding missing adult investigations have received new attention following the tragedies of 911.

#s70-71: **Tom Thorne, age 64; Beth Williams, age 53; Died: December 29, 2004.** Two wild life scientists, Husband-and-wife wildlife veterinarians who were nationally prominent experts on chronic wasting disease and brucellosis were killed in a snowy-weather crash on U.S. 287 in northern Colorado.

#69: **Taleb Ibrahim al-Daher. Died: December 21, 2004.** Iraqi nuclear scientist was shot dead north of Baghdad by unknown gunmen. He was on his way to work at Diyala University when armed men opened fire on his car as it was crossing a bridge in Baqouba, 57 km northeast of Baghdad. The vehicle swerved off the bridge and fell into the Khrisan river. Al-Daher, who was a professor at the local university, was removed from the submerged car and rushed to Baqouba hospital where he was pronounced dead.

#68: **John R. La Montagne, age 61. Died: November 2, 2004.** Died while in Mexico, no cause stated, later disclosed as pulmonary embolism. PhD, Head of US Infectious Diseases unit under Tommie Thompson. Was NIAID Deputy Director. Expert in AIDS Program work and Microbiology and Infectious Diseases.

#67: Matthew Allison, age 32. Died: October 13, 2004. Fatal explosion of a car parked at an Osceola County, Fla., Wal-Mart store. It was no accident, Local 6 News has learned. Found inside a burned car. Witnesses said the man left the store at about 11 p.m. and entered his Ford Taurus car when it exploded. Investigators said they found a Duraflame log and propane canisters on the front passenger's seat. Allison had a college degree in molecular biology and biotechnology.

#66: Mohammed Toki Hussein al-Talakani, age 40. Died: September 5, 2004: Iraqi nuclear scientist was shot dead in Mahmudiya, south of Baghdad. He was a practicing nuclear physicist since 1984.

#65: Professor John Clark, Age 52, Died: August 12, 2004. Found hanged in his holiday home. An expert in animal science and biotechnology where he developed techniques for the genetic modification of livestock; this work paved the way for the birth, in 1996, of Dolly the sheep, the first animal to have been cloned from an adult. Head of the science lab which created Dolly the sheep. Prof Clark led the Roslin Institute in Midlothian, one of the world's leading animal biotechnology research centers. He played a crucial role in creating the transgenic sheep that earned the institute worldwide fame. He was put in charge of a project to produce human proteins (which could be used in the treatment of human diseases) in sheep's milk. Clark and his team focused their study on the production of the alpha-1-antitrypsin protein, which is used for treatment of cystic fibrosis. Prof Clark also founded three spin-out firms from Roslin – PPL Therapeutics, Rosgen and Roslin BioMed.

#64: **Dr. John Badwey, age 54. Died: July 21, 2004.** Scientist and accidental politician when he opposed disposal of sewage waste program of exposing humans to sludge. Suddenly developed pneumonia like symptoms then died in two weeks. Biochemist at Harvard Medical School specializing in infectious diseases.

#63: Dr. Bassem al-Mudares. Died: July 21, 2004. Mutilated body was found in the city of Samarra, Iraq*. He was a PhD. chemist and had been tortured before being killed. He was a drug company worker who had a chemistry doctorate.

#62: **Professor Stephen Tabet, age 42. Died on July 6, 2004** from an unknown illness. He was an associate professor and epidemiologist at the University of Washington. A world-renowned HIV doctor and researcher who worked with HIV patients in a vaccine clinical trial for the HIV Vaccine Trials Network.

#61: Dr. Larry Bustard, age 53. Died July 2, 2004 from unknown causes. He was a Sandia scientist in the Department of Energy who helped develop a foam spray to clean up congressional buildings and media sites during the anthrax scare in 2001. He worked at Sandia National Laboratories in Albuquerque. As an expert in bioterrorism, his team came up with a new technology used against biological and chemical agents.

#60: Edward Hoffman, age 62. Died July 1, 2004 from unknown causes. Hoffman was a professor and a scientist who also held leadership positions within the UCLA medical community. He worked to develop the first human PET scanner in 1973 at Washington University in St. Louis.

#59: John Mullen, age 67. Died: June 29, 2004. A Nuclear physicist poisoned with a huge dose of arsenic. A nuclear research scientist with McDonnell Douglas. Police investigating will not say how Mullen was exposed to the arsenic or where it came from. At the time of his death he was doing contract work for Boeing.

#58: Dr. Paul Norman, age 52. Died: June 27, 2004. From Salisbury Wiltshire. Killed when the single-engine Cessna 206 he was piloting crashed in Devon. Expert in chemical and biological weapons. He traveled the world lecturing on defending against the scourge of weapons of mass destruction. He was married with a 14-year-old son and a 20-year-old daughter, and was the chief scientist for chemical and biological defense at the Ministry of Defense's laboratory at Porton Down, Wiltshire. The crash site was examined by officials from the Air Accidents Investigation Branch and the wreckage of the aircraft was removed from the site to the AAIB base at Farnborough.

#57: **Dr. Assefa Tulu, age 45. Died: June 24, 2004.** Dr. Tulu joined the health department in 1997 and served for five years as the county's lone epidemiologist. He was charged with tracking the health of the county, including the spread of diseases, such as syphilis, AIDS and measles. He also designed a system for detecting a bioterrorism attack involving viruses or bacterial agents. Tulu often coordinated efforts to address major health concerns in Dallas County, such as the West Nile virus outbreaks of the past few years, and worked with the media to inform the public. Found face down, dead in his office. The Dallas County Epidemiologist died of a hemorrhagic stroke.

#56: **Thomas Gold, age 84. Died: June 22, 2004.** Austrian born Thomas Gold famous over the years for a variety of bold theories that flout conventional wisdom and reported in his 1998 book, "The Deep Hot Biosphere," the idea challenges the accepted wisdom of how oil and natural gas are formed and, along the way, proposes a new theory of the beginnings of life on Earth and potentially on other planets. Long term battle with heart failure. Gold's theory of the deep hot biosphere holds important ramifications for the possibility of life on other planets, including seemingly inhospitable planets within our own solar system. He was Professor Emeritus of Astronomy at Cornell University and was the founder (and for 20 years director) of Cornell Center for Radiophysics and Space Research. He was also involved in air accident investigations.

#55: Antonina Presnyakova, age 46. Died: May 25, 2004. A Russian scientist at a former Soviet biological weapons laboratory in Siberia died after an accident with a needle laced with ebola. Scientists and officials said the accident had raised concerns about safety and secrecy at the State Research Center of Virology and Biotechnology, known as Vector, which in Soviet times specialized in turning deadly viruses into biological weapons. Vector has been a leading recipient of aid in an American program.

#54: **Dr. Eugene Mallove, age 56. Died: May 14, 2004.** Autopsy confirmed Mallove died as a result of several blunt-force injuries to his head and neck. Ruled as murder. Found at the end of his driveway. Alt. Energy Expert who was working on viable energy alternative program and announcement. Norwich Free Academy graduate. Beaten to death during an alleged robbery. Mallove was well respected for his knowledge of cold fusion. He had just published an “open letter” outlining the results of and reasons for his last 15 years in the field of “new energy research.” Dr. Mallove was convinced it was only a matter of months before the world would actually see a free energy device.

#53: William T. McGuire, age 39. Found May 5, 2004, last seen late April 2004. Body found in three suitcases floating in Chesapeake Bay. He was NJ University Professor and Senior programmer analyst and adjunct professor at the New Jersey Institute of Technology in Newark. He emerged as one of the world’s leading microbiologists and an expert in developing and overseeing multiple levels of biocontainment facilities.

#52: Ilsley Ingram, age 84. Died on April 12, 2004 from unknown causes. Ingram was Director of the Supraregional Haemophilia Reference Centre and the Supraregional Centre for the Diagnosis of Bleeding Disorders at the St. Thomas Hospital in London. Although his age is most likely the reason for his death, why wasn’t this confirmed by the family in the news media?

#51: Mohammed Munim al-Izmerly, Died: April 2004. This distinguished Iraqi chemistry professor died in American custody from a sudden hit to the back of his head caused by blunt trauma. It was uncertain exactly how he died, but someone had hit him from behind, possibly with a bar or a pistol. His battered corpse turned up at Baghdad’s morgue and the cause of death was initially recorded as “brainstem compression”. It was discovered that US doctors had made a 20cm incision in his skull.

#50: Vadake Srinivasan, Died: March 13, 2004. Microbiologist crashed car into guard rail in Baton Rouge, LA. Death was ruled a stroke. He was originally from India, was one of the most-accomplished and respected industrial biologists in academia, and held two doctorate degrees.

#49: Dr. Michael Patrick Kiley, age 62. Died: January 24, 2004. Died of massive heart attack. Ebola, Mad Cow Expert, top of the line world class. It is interesting to note, he had a good heart, but it “gave out”. Dr. Shope and Dr. Kiley were working on the lab upgrade to BSL4 at the UTMB Galveston lab for Homeland Security. The lab would

have to be secure to house some of the deadliest pathogens of tropical and emerging infectious disease as well as bioweaponized ones.

#48: Robert Shope, age 74. Died: January 23, 2004. Virus Expert Who Warned of Epidemics, He died of lung transplant complications. Later purported to have died of Idiopathic Pulmonary Fibrosis which can be caused by either environmental stimulus or a VIRUS. It would not be hard to administer a drug that would cause Dr. Shope's lung transplant to either be rejected or to cause complications from the transplant. Dr. Shope led the group of scientists who had an 11 MILLION dollar fed grant to ensure the new lab would keep in the nasty bugs. Dr. Shope also met with and worked with Dr. Mike Kiley on the UTMB Galveston lab upgrade to BSL 4. When the upgrade would be complete the lab will host the most hazardous pathogens known to man especially tropical and emerging diseases as well as bioweapons.

#47: Dr Richard Stevens, age 54. Died: January 6, 2004. He had disappeared after arriving for work on 21 July, 2003. A doctor whose disappearance sparked a national manhunt, killed himself because he could not cope with the stress of a secret affair, a coroner has ruled. He was a hematologist. (hematologists analyze the cellular composition of blood and blood producing tissues e.g. bone marrow).

Died 2003

#46: Robert Aranosia, age 61. Died: December 18, 2003. While driving south on I-75 his pickup truck went off the freeway near a bridge over the Kawkawlin River. The vehicle rolled over several times before landing in the median. Aranosia was thrown from the vehicle and ended up on the shoulder of the northbound lanes. He was the Oakland County deputy medical examiner.

#45: Robert Leslie Burghoff, age 45. Died: November 20, 2003. Scientist. Killed by a hit and run driver that jumped the curb and ploughed into him in the 1600 block of South Braeswood, Texas. The driver was described as a short Hispanic man in his 50s with a slightly rounded face. He was studying the virus plaguing cruise ships.

#44: Michael Perich, age 46. Died: October 11, 2003. Died in one-vehicle car accident. The LSU West Nile research scientist was wearing his seat belt and drowned. He was LSU professor who helped fight the spread of the West Nile virus. Perich, who was known as one of the country's experts on vector-borne diseases, had most recently led a crusade to keep down the effects of West Nile virus and to get many of the Louisiana's parishes to work toward forming mosquito control districts.

#43: David Kelly, age 59. Died: July 18, 2003. British biological weapons expert, was said to have slashed his own wrists while walking near his home. Kelly was the Ministry of Defense's chief scientific officer and senior adviser to the proliferation and arms control secretariat, and to the Foreign Office's non-proliferation department. The senior adviser on biological weapons to the UN biological weapons inspections teams (Unscm) from 1994 to 1999, he was also, in the opinion of his peers, pre-eminent in his field, not only in this country, but in the world.

#42: Dr. Leland Rickman, age 47. Died: June 24, 2003. Rickman died while on a teaching assignment in Lesotho, a small country bordered on all sides by South Africa. UC San Diego expert on infectious diseases and, since September 11, 2001 a consultant on bioterrorism. He had complained of a headache, but the cause of death was not immediately known. The physician had been working in Lesotho with Dr. Chris Mathews, director of the UC San Diego Medical Center's Owen Clinic, teaching African medical personnel about the prevention and treatment of AIDS. Rickman, the incoming president of the Infectious Disease Assn. of California, was a multidisciplinary professor and practitioner with expertise in infectious diseases, internal medicine, epidemiology, microbiology and antibiotic utilization.

#41: 'Dr. Roger' Died: Summer 2003. 'Roger' was pseudonym for this genetics scientist. He was 17 and lived in Roswell, New Mexico in 1947 when the unexplained object crashed. He told a woman he worked with in 1977 named 'Kate' while employed by the Navy, who he helped to clean up the crash site of the 1947 UFO. He subsequently went to work for the government at this young age and ended up a geneticist working in China Lake for the Navy. Although he lived in fear and hiding soon after he told his story to Kate, he retired in late 1990s or early 2000's and she saw him again once in early 2002 in San Diego. He told her she was in danger to talk to him and he left the store. In 2003 she received a phone call from his 'friend' who said he had been executed in his retirement home in Connecticut. The body had been removed by a black government looking vehicle. The home had been cleaned up and the body removed without any public notices of his death or existence. Many disfigured and abnormal animals were found in the desert near Groom Lake during his time there and after. Kate thought he might have been doing this gruesome experimental work.

#40: Carlo Urbani, age 46. Died: in April 2003 in Bangkok from SARS (severe acute respiratory syndrome) – the new disease that he had helped to identify. Thanks to his prompt action, the epidemic was contained in Vietnam. However, because of close daily contact with SARS patients, he contracted the infection. On March 11, he was admitted to a hospital in Bangkok and isolated. Less than three weeks later he died. He was a dedicated and internationally respected Italian epidemiologist, who did work of enduring value combating infectious illness around the world.

Died 2002

#39: Roman Kuzmin. Died December 2002. A 24-year-old Russian surgeon studying in Connecticut was fatally struck by a car as he fled a store with three stolen rolls of film, police said. He was studying to be an orthopedic surgeon. Doctors who worked with Roman Kuzmin at Waterbury Hospital said they were stunned to hear of his death Sunday evening and many couldn't believe the circumstances. Kuzmin left Vladivostok in September to study orthopedic surgical techniques at Waterbury Hospital under a Keggi Othopedic Foundation program. Dr. Kristaps Keggi, who organized the program, said Kuzmin was "very able, very bright – a superb student and a superb individual."

#38B: **Dr. David R. Knibbs, age 49. Died: August 5, 2002.** Respected pathobiologist specializing in electron microscopy.

#38: **Steven Mostow, age 63. Died: March 25, 2002.** One of the country's leading infectious disease and bioterrorism experts and was associate dean at the University of Colorado Health Sciences Center. He died in a plane crash near Centennial Airport. He was known as "Dr. Flu" for his expertise in treating influenza, and expertise on bioterrorism. Mostow was one of the country's leading infectious disease experts.

#37: **Dr. David Wynn-Williams, age 55. Died: March 24, 2002.** Hit by a car while jogging near his home in Cambridge, England. He was an astrobiologist with the Antarctic Astrobiology Project and the NASA Ames Research Center. He was studying the capability of microbes to adapt to environmental extremes, including the bombardment of ultraviolet rays and global warming.

s#35-36: Tanya Holzmayer, age 46, Died: February 28, 2002: Two dead microbiologists in San Francisco. While taking delivery of a pizza, Tanya Holzmayer was shot and killed by a colleague, **Guyang "Mathew" Huang, 38**, who then apparently shot himself. Holzmayer moved to the US from Russia in 1989. Her research focused on the part of the human molecular structure that could be affected best by

medicine. Holzmayr was focusing on helping create new drugs that interfere with replication of the virus that causes AIDS. One year earlier, Holzmayr obeyed senior management orders to fire Huang. Huang appeared from behind the deliveryman. He shot Holzmayr several times at close range in the chest and head. As Holzmayr fell in her doorway, Huang ran to a Ford Explorer and drove away. Less than an hour after the shooting, Huang called his wife, according to Foster City Police Capt. Craig Courtin. He told her about the shooting and that he was going to kill himself, then he hung up. Huang's wife called the emergency services and Foster City police used search dogs to comb the area. They ran into a jogger who had seen Huang's body lying off the walkway that locals call "The Levee." He had fired a single bullet into his head.

#34: Dr. Ian Langford, age 40, Died: February 12, 2002. Found dead at his blood-spattered and apparently ransacked home A Russian who was a Senior Research Associate in CSERGE, UK. He was a leading university research scientist working on Global Environment, specializing in links between human health and the environment risk, was. Specialist in leukemia and infections.

#33: Dr. Vladamir "Victor" Korshunov, age 56. Died: February 9, 2002. Found dead on a Moscow street. Head was bashed in. Korshunov was head of the microbiology sub-facility at the Russian State Medical University. He was found dead in the entrance to his home with a head injury. On Feb. 9 the Russian newspaper *Pravda* reported that Korshunov had probably invented a vaccine protecting from any biological arm.

#32: David W. Barry, age 58, Died: January 28, 2002. Scientist who co-discovered AZT, the antiviral drug that was considered the first effective treatment for AIDS. Circumstance of Death are unknown. (AZT later proved harmful for AIDS patients.)

#31: Dr. Ivan Glebov. Died: January 2002. Russian Microbiologist. Glebov died as the result of a bandit attack. Well known around the world and members of the Russian Academy of Science.

#30: Dr. Alexi Brushlinski. Died: January 2002. Russian Microbiologist. Murdered in Moscow from bandit attack. Well known around the world and members of the Russian Academy of Science.

Died 2001

#29 Dr. Benito Que, age 52. Found: November 12, 2001. Died: December 6, 2001. Found Comatose from what was called a mugging. Died later in hospital. Found in the street near the laboratory where he worked at the University of Miami Medical School. Among Dr. Que's friends and family there is firm belief that Dr. Que was attacked by four men, at least one of whom had a baseball bat. Dr. Que's death has now been officially ruled "natural", caused by cardiac arrest. He was a cell biologist, involved in research on aids, oncology research in the hematology department.

#28: Dr. Vladimer Pasechnik, age 64. Died: December 23, 2001. Found dead in Wiltshire, England, a village near his home. Two different dates have been reported: November 21 and December 23. Death ruled stroke. He had defected from Russia to UK. He had been the #1 scientist in the FSU's bioweapons program. It was thought he was involved with exhuming the bodies of the 10 London victims of the 1919 Type A flu epidemic. Pasechnik died six weeks after the planned exhumations were announced. On November 23, 2001, Pasechnik's death was reported in the New York Times as having occurred two days earlier. Pasechnik's death was made in the United States by Dr. Christopher Davis of Virginia, who stated that the cause of death was a stroke. Dr. Davis was the member of British intelligence who de-briefed Dr. Pasechnik at the time of his defection. Pasechnik was heavily involved in DNA sequencing research. He had just founded a company like three other microbiologists working to provide powerful alternatives to antibiotics. Dr. Vladimir

Pasechnik was the boss of William C. Patrick III who holds 5 patents on the militarized anthrax used by the United States. Patrick is now a private biowarfare consultant to the military and CIA. Patrick developed the process by which anthrax spores could be concentrated at the level of one trillion spores per gram. No other country has been able to get concentrations above 500 billion per gram. The anthrax that was sent around the eastern United States last fall was concentrated at one trillion spores per gram.

#27: Dr. Don Wiley, age 57. Vanished: December 16, 2001. Molecular Biologist with Howard Hughes Medical Institute, Harvard University, top Deadly Contagious Virus expert, abandoned rental car was found on the Hernando de Soto Bridge outside Memphis, TN. He was heavily involved in research on DNA sequencing, and was last seen at around midnight on November 16, leaving the St. Jude's Children's Research Advisory Dinner at The Peabody Hotel in Memphis, TN. Associates attending the dinner said he showed no signs of intoxication, and no one has admitted to drinking with him. Body found floating one month later. Workers at a hydroelectric plant in Louisiana found the body of Don Wiley on Thursday, about 300 miles south of where the molecular biologist was last seen on Nov. 18 at a medical meeting in Memphis. On January 14, 2002 (almost two months later) Shelby County Medical Examiner O.C. Smith announced that his department had ruled Dr. Wiley's death to be "accidental"; the result of massive injuries suffered in a fall from the Hernando de Soto Bridge. Smith said there were paint marks on Wiley's rental car similar to the paint used on construction signs on the bridge, and that the car's right front hubcap was missing. There has been no report as to which construction signs Dr. Wiley hit.

#26: Dr. Set Van Nguyen, age 44. Died: December 14, 2001. Found dead in the airlock entrance to the walk-in refrigerator in the laboratory he worked at in Victoria State, Australia. The room was full of deadly gas which had leaked from a liquid nitrogen cooling system. Room was vented. Working on a vaccine to protect against biological weapons, or a weapon itself. In January, 2001, the

magazine *Nature* published information that two scientists, Dr. Ron Jackson and Dr. Ian Ramshaw, using genetic manipulation and DNA sequencing, had created an incredibly virulent form of mousepox, a cousin of smallpox and Dr. Nguyen had worked for 15 years at the same Australian facility. Now for the intriguing part of this story. On Friday, November 2nd, the *Washington Post* reported: "Officials are now scrambling to determine how a quiet, 61-year-old Vietnamese immigrant, riding the subway each day to and from her job in a hospital stockroom, was exposed to the deadly anthrax spores that killed her this week. They worry because there is no obvious connection to the factors common to earlier anthrax exposures and deaths: no clear link to the mail or to the media.

#25: Dr. David Schwartz , age 57. Died: December 10, 2001. Murdered by stabbing with what appeared to be a sword in rural home Loudon County, Virginia. His daughter, who identifies herself as a pagan high priestess, and three of her fellow pagans have been charged. He was extremely well respected in biophysics, and regarded as an authority on DNA sequencing. Three teens that were into the occult were charged with murder in the slashing death.

#s22-24: Avishai Berkman, age 50. (no photo)

Amiramp Eldor, age 59

Yaacov Matzner, age 54

All Died: November 24, 2001. Another airplane crash kills 3 scientists. At about the time of the Black Sea crash, Israeli journalists had been sounding the alarm that two Israeli microbiologists had been murdered, allegedly by terrorists; including the head of the Hematology department at Israel's Ichilov Hospital, as well as directors of the Tel Aviv Public Health Department and Hebrew University School of Medicine. World experts in hematology and blood clotting. Five microbiologists in this list of the first eight people that died mysteriously in airplane crashes worked on cutting edge microbiology research; and, four of the five were doing virtually identical research; research that has global political and financial significance.

#21: Jeffrey Paris Wall, age 41. Died: November 6, 2001. Body was found sprawled next to a three-story parking structure near his office. Mr. Wall had studied at the University of California, Los Angeles. He was a biomedical expert who held a medical degree, and he also specialized in patent and intellectual property.

#16-#20: Five Unnamed Microbiologists. Died: October 4, 2001. Four of Five unnamed microbiologists on a plane that was brought down by a missile near the Black sea on the Russian border. Traveling from Israel to Russia; business not disclosed. 3 scientists were experts in medical research or public health. The plane is believed by many in Israel to have had as many as four or five passengers who were microbiologists. Both Israel and Novosibirsk are homes for cutting-edge microbiological research. Novosibirsk is known as the scientific capital of Siberia. There are over 50 research facilities there, and 13 full universities for a population of only 2.5 million people.

#15: Professor Janusz Jeljaszewicz, Died: on May 7, 2001, cause not disclosed. He was an expert in Staphylococci and Staphylococcal Infections. His main scientific interests and achievements were in the mechanism of action and biological properties of staphylococcal toxins, and included the immunomodulatory properties and experimental treatment of tumors by Propionibacterium.

Died 2000

#14: Linda Reese, age 52. Died: December 25, 2000 three days after she studied a sample from Tricia Zailo, 19, a Fairfield, N.J., resident who was a sophomore at

Michigan State University. Tricia Zailo died Dec. 18, a few days after she returned home for the holidays. Dr. Reese was a Microbiologist working with victims of meningitis.

#13: Mike Thomas, age 35. Died: July 16, 2000 a few days after examining a sample taken from a 12-year-old girl who was diagnosed with meningitis and survived. He was a microbiologist at the Crestwood Medical Center in Huntsville.

#12: Walter W. Shervington, M.D., age 62. Died: April 15, 2000 of cancer at Tulane Medical Hospital. He was an extensive writer/ lecturer/ researcher about mental health and AIDS in the African American community.

Died 1998

#11: Jonathan Mann, age 51. Died September 1998, in Swissair Flight 111 over Canada. He was founding director of the World Health Organization's global Aids program and founded Project SIDA in Zaire, the most comprehensive Aids research effort in Africa at the time, and in 1986 he joined the WHO to lead the global response against Aids. He became director of WHO's global program on Aids which later became the UNAids program. He then became director of the Francois-Xavier Bagnoud Center for Health and Human Rights, which was set up at Harvard School of Public Health in 1993. He caused controversy earlier in 1998 in the media when he accused the US National Institutes of Health of violating human rights by failing to act quickly on developing Aids vaccines.

#10: Elizabeth A. Rich, M.D., age 46. Died July 10, 1998, in a traffic accident while visiting family in Tennessee. She was an associate professor with tenure in the pulmonary division of the Department of Medicine at CWRU and University Hospitals of Cleveland. She was also a member of the executive committee for the Center for AIDS Research and directed the Bio-safety level3 facility, a specialized laboratory for the handling of HIV, virulent TB bacteria, and other infectious agents. .

Died 1994 – 1996

#9: Sidney Harshman, age 67. Died: Dec. 25, 1997, from complications of diabetes. He was a professor of microbiology and immunology. He was the world's leading expert on staphylococcal alpha toxins.

#s6-8: Mark Purdey, his Lawyer, and Veterinarian working with Purdey Die: CJD doctor Mark Purdey was familiar with the expression "abnormal brain protein." Purdey's house was burned down, his lawyer on mad cow issues was driven off the road and died and the veterinarian in the UK BSE inquiry also died in a mysterious car crash. CJD specialist Dr C. Bruton was killed in a car crash just before he went public with a new research paper. The veterinarian on the case also died in a car crash. Purdey's new lawyer, too, had a car accident, but not fatal. Before Dr. Purdey's death, he speculated that Dr. C. Bruton (#2 below) might have known more than what was revealed in his paper before he was killed.

#4-5 Dr. Tsunao Saitoh, age 46. Died: May 7, 1996. Shot and killed, along with his young daughter, in LaJolla, California. He was dead behind the wheel of the car, the side window had been shot out, and the door was open. His daughter appeared to have tried to run away and she was shot dead, also. The hit was compared to other killings of Japanese in this country by muggers. Expert in abnormal proteins in Alzheimer.

#3 Dr. Jawad Al Aubaidi. Died in 1994. A graduate doctor from Cornell, he was hired to head the mycoplasma biowar research project. One of Dr. Aubaidi's projects was filling payloads of scud missiles with mycoplasma strains. In 1995, Dr. Aubaidi was murdered by the Israelis Mossad. His demise, or, neutralization was made to look like an accident. He was killed in his native Iraq while he was changing a flat tire and was hit by a truck.

#2 Dr. C. Bruton, a CJD specialist — who had just produced a paper on the a new strain of CJD — was killed in a car crash before his work was announced to the public. Purdey speculates that Bruton might have known more than what was revealed in his paper.

#1 Jose Trias, Died: May 19, 1994. Trias and his wife were murdered in their Chevy Chase, Maryland home. They met with a friend of theirs, a journalist, before the day of their murder and told him of their plan to expose HHMI (Howard Hughes Medical Institute) funding of “special ops” research. Grant money that goes to HHMI is actually diverted to special black ops research projects.

This past week, the CDC quietly updated COVID-19 numbers – Only 9,210 Americans died from COVID-19 alone – The rest had different other serious illnesses.

So let's get this straight – based on the recommendation of doctors Fauci and Birx the US shut down the entire economy based on 9,000 American deaths due entirely to the China coronavirus?

...The Director General of the WHO on March 3, 2020 set off the panic with his highly flawed statement: *“While many people globally have built up immunity to seasonal flu strains, COVID-19 is a new virus to which no one has immunity. That means more people are susceptible to infection, and some will suffer severe disease. Globally, about 3.4% of reported COVID-19 cases have died. By comparison, seasonal flu generally kills far fewer than 1% of those infected”*.

This statement caused a global panic. The WHO leader's coronavirus death rate number of 3.4% was false. The coronavirus fatality rate reported by the liberal mainstream media was completely inaccurate – ...the media was lying again.

Doctors Fauci and Birx next pushed ridiculous and highly exaggerated mortality rates. [Their] fraudulent model predicted 2.2 million American deaths from the coronavirus pandemic. The information was shared with the White House and Doctors Fauci and Birx ...urged [President Trump] to shut down the US economy and destroy the record Trump economy based on the faulty and overblown figures.

Today we now have empirical evidence that the WHO, Dr. Fauci and Dr. Birx were all wrong. They were charlatans. They lied!

The CDC silently updated their numbers this week to show that only 6% of all coronavirus deaths were completely due to the coronavirus alone. The rest of the deaths pinned to the China coronavirus are attributed to individuals who had other serious issues going on or were advanced in age.

Throughout history, plagues have killed mostly healthy people. But Coronavirus has killed mostly sick people. See the difference? Hang in here with me because I will be explaining why and how the CDC's move to update their figures and make this big announcement benefits the agenda of the New World Order.

Not only are the number of deaths linked entirely to the China coronavirus minuscule, but the virus appears to be naturally dying out.

Let's face it – at this moment in time anyone who is pushing for more lockdowns and other abuses on our personal rights is either evil or terribly misinformed.

The question to be asked is what is in it for the New World Order to allow the CDC to release numbers that so highly contradict their former lies which they have kept up since last March?

Don't you think they know people are spouting that they will refuse to vaccinated? Of course they do. Those polls are reported regularly. So, how, oh how, can they get

people to take the vaccine when we all know about their scam and now they have admitted it?

Good question! The reason for the “come clean” is to set the trap! For over 100 years, the Rockefeller and other Foundations and rich people have been experimenting with ways to make the general population sick and keep them that way. It turns out that a sick population is an easy one to control when threatened about not getting healthcare. Now that the global population is mostly in socialized or other medical systems, the New World Order can do the big takeaway!

Ah! Ah! Ah! No more health care for you, oh one who has heart disease, cancer or diabetes if you won't get vaccinated. *“Guess what”, they will say, “we discovered that it is the sick and old who die from the virus, not the healthy as in other historic plagues. And now that we have you in our grip, we can blackmail you! If you take the vaccine, you can stay in the medical system. If not, well then, you're on your own. Go and die!”*

Sick people have weak minds much of the time and not the will to resist such blackmail. They're scared of dying anyway. The threat of contracting a virus that preys on the sick and elderly will only ramp up their fears. Many, perhaps most, will succumb out of fear of not getting medications, doctor visits (because you know, we can't have unvaccinated people endangering the lives of our patients in the waiting rooms), emergency healthcare for heart attack, strokes, accidents and so forth (because you know, we can't have unvaccinated people endangering the lives of our patients in the emergency room). So, no identifiable vaccine record under the skin, no help.

The CDC's numbers really tell another tale. This is one way the New World Order plans to cull the population down to its 500,000,000. They think we won't see through this but God protects His people and one way He does that is by opening our eyes to understand what we see!

Here is something important for you to understand: The White House and the media are saying nothing about this! Folks, this is huge news! Yet, only a few alternate news outlets are telling you about it. They don't want you to know their plan to blackmail the mostly sick people of the world but, because the New World Order has an internal obligation to send warnings, this information has been released and then immediately suppressed in the media. At least that is what it appears to be right now. Maybe the CDC's information will be reported at another time, but I doubt it.

Across the USA, faith leaders debate how they can continue to pray in fellowship with others while keeping staff and members safe in the age of coronavirus. Some churches have moved completely online, others have embraced drive-in service, and some are adamant about holding in-person gatherings.

Proponents of church services argue that places of worship are a crucial source of strength, community and solace for many Americans, who should be allowed to safely congregate. Critics said soaring cases of COVID-19 have made it impossible for large

groups to interact and follow public health guidelines. In July, the Supreme Court ruled for the second time during the pandemic that churches can be restricted from worshipping to protect public health.

Churches are essential. If protesters can assemble, so should people of faith, you would think. And this is all the more so as we see the days of Tribulation approaching.

Look at what is going on globally, though. People... Please understand this is not an American issue. This has now become the Kingdom of Satan vs the Kingdom of God issue for however many thousands of years, whichever way you want to calculate it, and it is leading us into the Tribulation.

A groundbreaking new study commissioned by *'Revolver News'* concludes that COVID-19 lockdowns are ten times more deadly than the actual COVID-19 virus in terms of years of life lost by American citizens.

Up until this point there had been no simple, rigorous analysis that accurately and definitively conveys the true costs of the COVID-19 lockdowns. Accordingly, *Revolver News* set out to commission a study to do precisely that: to finally quantify the net damage of the lockdowns in terms of a metric known as "life-years." Simply put, we have drawn upon existing economic studies on the health effects of unemployment to calculate an estimate of how many years of life will have been lost due to the lockdowns in the United States, and have weighed this against an estimate of how many years of life will have been saved by the lockdowns. **The results are nothing short of staggering, and suggest that the lockdowns will end up costing Americans over 10 times as many years of life as they will save from the virus itself.**

The COVID-19 lockdown measures that Americans have had to endure for the greater part of 2020 represent one of the most dramatic, consequential, and damaging policy measures undertaken in this nation's history. **For the first time in its history, America has experienced a situation so crippling and perilous that long term financial and social stability have been legitimately threatened.**

As with everything in 2020 America, these lockdown measures have become deeply politicized. President Trump opposes further devastating lockdowns. In his recent Republican National Convention speech, President Trump raised the point that lockdowns have had very real and very devastating effects on the lives of many Americans.

Do Not Take a Vaccine or Submit to a Fake Test to Determine Whether One Has a Virus!

“My people are destroyed for lack of knowledge: because thou hast rejected knowledge, I will also reject thee, that thou shalt be no priest to me: seeing thou hast forgotten the law of thy God, I will also forget thy children.” –(Hosea 4:6)

The words of the 8th century B.C. prophet Hosea are going to have global significance by the events that will take place in the next twelve weeks

3% of the population will pay attention, 7% will give passing consideration, but 90% will disregard the warning about the things that are coming within the next twelve weeks shared in this article.

Blessings,
