

CDC (LIES)
The PANDEMIC HOAX
A Cover Story for Hiding 5G's Lethality
Official CDC Report Puts COVID-19 Death Rate at Just 0.26%

Most people are more likely to wind up six feet under because of almost anything else under the sun other than COVID-19.

The [CDC just came out with a report](#) that should be earth-shattering to the narrative of the political class, yet it will go into the thick pile of vital data and information about the virus that is not getting out to the public. [1]

For the first time, the CDC has attempted to offer a real estimate of the overall death rate for COVID-19, and under its most likely scenario, the number is 0.26%. Officials estimate a 0.4% fatality rate among those who are symptomatic and project a 35% rate of asymptomatic cases among those infected, which drops the overall infection fatality rate (IFR) to just 0.26% — almost exactly where [Stanford researchers pegged it](#) a month ago.

Parameter	Scenario 1	Scenario 2	Scenario 3	Scenario 4	Scenario 5: Current Best Estimate
R ₀ Source: Preliminary COVID-19 estimates, ASPR and CDC	2	2	3	3	2.5
Symptomatic Case Fatality Ratio, stratified by age in years Source: Preliminary COVID-19 estimates, CDC	0-49: 0.0002	0-49: 0.0002	0-49: 0.001	0-49: 0.001	0-49: 0.0005
	50-64: 0.001	50-64: 0.001	50-64: 0.006	50-64: 0.006	50-64: 0.002
	65+: 0.006	65+: 0.006	65+: 0.032	65+: 0.032	65+: 0.013
	Overall: 0.002	Overall: 0.002	Overall: 0.010	Overall: 0.010	Overall: 0.004

Until now, we have been ridiculed for thinking the death rate was that low, as opposed to the [3.4% estimate of the World Health Organization](#), which helped drive the panic and the lockdowns. Now the CDC is agreeing to the lower rate in plain ink.

Plus, ultimately we might find out that the IFR is even lower because numerous studies and [hard counts of confined populations](#) have shown a much higher percentage of asymptomatic cases. Simply adjusting for a 50% asymptomatic rate would drop their fatality rate to 0.2% – exactly the rate of fatality Dr. John Ionnidis of Stanford University [projected](#).

More importantly, as mentioned before, the overall death rate is meaningless because the numbers are so lopsided. Given that at least half of the deaths were in nursing homes, a back-of-the-envelope estimate would show that the infection fatality rate for non-nursing home residents would only be 0.1% or 1 in 1,000. And that includes people of *all* ages and *all* health statuses outside of nursing homes. Since nearly all of the deaths are those with comorbidities.

The CDC estimates the death rate from COVID-19 for those under 50 is 1 in 5,000 for those with symptoms, which would be 1 in 6,725 overall, but again, almost all those who die have specific comorbidities or underlying conditions. Those without them are more [likely to die in a car accident](#). And schoolchildren, whose lives, mental health, and education we are destroying, are more likely to [get struck by lightning](#).

To put this in perspective, one [Twitter commentator](#) juxtaposed the age-separated infection fatality rates in Spain to the average yearly probability of dying of anything for the same age groups, based on data from the Social Security Administration. He used Spain because we don't have a detailed infection fatality rate estimate for each age group from any survey in the U.S. However, we know that Spain fared worse than almost every other country. This data is actually working with a top-line IFR of 1%, roughly four times what the CDC estimates for the U.S., so if anything, the corresponding numbers for the U.S. will be lower.

Being alive simply means there is a risk that you will die in every year of your life. Normally we don't think about this because the probability is very small.

It turns out that even if you are infected with COVID; your increased risk to die vs normal is not very large at all.

Increased Probability of Death Incurred by Covid-19 Infection in Different Age Groups				
Age	COVID IFR*	Average Yearly Probability of Death**	Combined Death Rate	Increased Yearly Probability of Death Caused by Covid Infection
0-9	0.002%	0.073%	0.075%	2.41%
10-19	0.003%	0.033%	0.036%	7.70%
20-29	0.010%	0.107%	0.117%	8.67%
30-39	0.022%	0.160%	0.181%	12.00%
40-49	0.042%	0.267%	0.309%	13.57%
50-59	0.137%	0.614%	0.752%	18.26%
60-69	0.486%	1.288%	1.774%	27.42%
70-79	1.661%	3.028%	4.689%	35.42%
80-89	5.789%	8.582%	14.371%	40.28%
90+	10.337%	24.944%	35.281%	29.30%
* Based on Analysis of Spanish Antibody Study				
** https://www.ssa.gov/oact/STATS/table4c6.html				@gummibear737

As you can see, even in Spain, the death rates from COVID-19 for younger people are very low and are well below the annual death rate for any age group in a given year. For children, despite their young age, they are 10-30 times more likely to die from other causes in any given year.

While obviously yearly death rates factor in myriad of causes of death and COVID-19 is just one virus, it still provides much-needed perspective to a public policy response that is completely divorced from the risk for all but the oldest and sickest people in the country.

Also, bear in mind, these numbers represent your chance of dying once you have already contracted the virus, aka the infection fatality rate. Once you couple the chance of contracting the virus in the first place together with the chance of dying from it, many younger people have a higher chance of dying from a lightning strike.

Four infectious disease doctors in Canada [estimate](#) that the individual rate of death from COVID-19 for people under 65 years of age is six per million people, or 0.0006 per cent – 1 in 166,666, which is “*roughly equivalent to the risk of dying from a motor vehicle accident during the same time period.*”

These numbers are for Canada, which did have fewer deaths per capita than the U.S.; however, if you take New York City and its surrounding counties out of the equation, the two countries are pretty much the same. Also, remember, so much of the death is associated with the suicidal political decisions of certain states and countries to place COVID-19 patients in nursing homes. An [astounding 62 percent of all COVID-19 deaths](#) were in the six states confirmed to have done this, even though they only compose 18 percent of the national population.

We destroyed our entire country and suspended democracy all for a lie, and these people perpetrated the unscientific degree of panic. Will they ever admit the grave consequences of their error?

PRINCIPIA SCIENTIFIC INTERNATIONAL, legally registered in the UK as a company incorporated for charitable purposes. Head Office: 27 Old Gloucester Street, London WC1N 3AX.

I am going to lay out the grand scheme that was executed last September, 2019. Over the past five months I wrote an eleven-part series of reports titled,

Wuhan Was a Test Run for Weaponized 5G
5G + Coronavirus + Vaccinations + Chemtrails = Depopulation Event

As of late May, 2020, there are 11 segments. Like that old expression, “hindsight is 20/20”, we are now able to see things with greater clarity and sharpness. A major point that has never been made public is the fact that the Corona virus or COVID-19 was a bio-engineered bio-weapon. The media has been silent on this very fact. We know for certainty that the ordinary Corona virus was weaponized the world still believes it to be a virus that jumped from animals to humans in China. The truth will continue to be called “conspiracy theory”, a term created by the CIA back in the 1960’s.

So it may come as no surprise that there is even a conspiracy theory about the origins of the label. This conspiracy theory claims that the CIA invented the term in 1967 to disqualify those who questioned the official version of John F Kennedy's assassination and doubted that his killer, Lee Harvey Oswald, had acted alone. What is nearly as scary is that 30% of the public still believes the "lone shooter" story.

Did you know...

The term "conspiracy theorist" was created by the CIA to stop critical thinkers from asking questions about the JFK assassination?

In a memo called "Countering Criticism of The Warren Report" the CIA set out to make the term "conspiracy theorist" as a weapon to be used against anyone who questioned the government's illegal activities and secret programs. And it has worked like a charm ever since.

TRUTH

What I stated in January, 2020, almost five months ago, that the Corona Virus, now called COVID-19 was a hoax, a scam, a plandemic, to hide crimes against humanity conducted as part of a depopulation event executed as a “Beta test” or trial run of the new 5G technology simultaneously being rolled out in the fall of 2019, is now further proof of a diabolical plan of the Illuminati.

In one of the segments in the above referenced series, there is a detailed list of 9 events going on between September and October of 2019. In Part 10 of this series, there is an interesting list of **“9 Simulations, Drills and Laws that Planned and Prepared for the Coronavirus”**. The world has been led to believe that all of these were coincidence and unrelated whatsoever. They are part of a global elite plan to enslave the world.

Reports keep coming in how the Corona virus has mutated and that there are many variants today. That is another anomaly that few can begin to confirm or validate. When the virus hit U.S. shores, there were three strains that entered the U.S. at the same time, one on the west coast and two strains on the east coast. Coincidence – not likely! These are nothing but distractions put out there to distract and confuse the public.

Italian medical authorities reported in late May, 2020, that 98% of all so-called Corona virus victims had other mitigating health issues, a major factor in those with compromised immune systems. This speaks directly to the effects of 5G and related Cellular communications. I will share at the back side of this article something that makes this issue personal for me related to EMF toxic non-ionizing radiation sickness. COVID-19 was being (intentionally being blamed for what is most likely to be the real cause of radiation sickness from 5G.

Since I first began to write the 11-part series on **“Wuhan Was a Test Run for Weaponized 5G”**, I shared a study that came out of Europe by a Spanish scientist in microbiology. The study demonstrated a relationship between “coronavirus” outbreaks and the presence of 5G networks has emerged from Spain at the University of Barcelona.

The study demonstrates clearly the most likely probability that the COVID-19 hypoxic injuries and hospital admissions are directly related to electromagnetic radiation exposure by 5G Networks. Some of the more startling discoveries are:

- The nine countries with the most infections worldwide all receive 5G radiation from satellites.
- Comparing four nearby countries of the same latitude: Portugal, Spain, Italy, and Greece. The two countries with 5G (Spain and Italy) have 220% more infections than Portugal and Greece.

- The comparison between the small State of San Marino (Italy) and Croatia (just across the Adriatic Sea) is astonishing. San Marino was the first European state to get 5G technology, and has the highest rate of infection. San Marino is 2.59 times more than Italy and 27 times more than Croatia — a country that does not have 5G.
- The five hot cities in Italy align with the 5G rollouts, as does Spain. Even the hot spots in Barcelona and Madrid align with 5G coverage. Another very interesting comparison is between Mexico and the U.S. Rates in the 5G-U.S. are 2.7 per 1000 inhabitants, whereas Mexico (no 5G) is 0.04/1000.
- Another astonishing observation is Africa — a continent almost devoid of infections, except for South Africa. Well Bartomeu claims that only South Africa has 5G. As a further observation from me, most of the Australian cases were from those off the 5G-cruise ships and coming off international flights. Were they flying close to 5G satellites?

Bartomeu's observations about 5G in China and surrounding countries is yet another red flag. The countries surrounding China had approximately 10X fewer cases. Myanma has 0.0007/1000 inhabitants infection rate.

It is clear from this biologist's research that 5G plays a part in this pandemic. One has to assume the government researchers know of the impacts on the human body. It would be easy and inexpensive to conduct experiments to test the health impact on humans and other life forms. They must have decided the risk of 5G frequencies are worth taking.

The study was published about 2 weeks ago and draws a clear correlation between 5G and the Corona virus outbreak. I reiterate my point that the Corona virus was a bio-weapon with injected elements of SARS, Ebola, and HIV. This discovery by Indian scientists early on confirmed it was far from being a natural event. It is likely that the ordinary virus known as Corona was gene-spliced in a variety of pathogenic forms, with the purpose of confusing virologists, and the medical community. This would have gained time for its spreading around the world.

The Corona virus has been patented at least twice, first about a decade ago and then again in 2017 by Bill Gates funded Pirbright Institute located in Surrey, UK. To patent a virus means that the patent holder has a vaccine available for vaccinations. The category COVID-19, means it is the 19th specimen. Patenting a virus is a morbid way of profiting off the ills of others. The vaccine, developed and championed by Anthony Fauci and financed by Bill Gates, used an experimental mRNA technology that the two men hoped would allow rapid deployment to meet President Trump's ambitious "warp speed" time line. Dr. Fauci was so confident of his shot's safety that he waived ferret and primate studies (Moderna suspiciously reported no specific health data from its mouse

studies). That appears to have been a serious mistake. Vaccine Trial Catastrophe: Moderna Vaccine has a 20% ‘Serious’ injury rate in high dose group according to Robert F. Kennedy, Jr., Chairman, Children’s Health Defense. A 20% injury rate does not seem to me something that I would submit it under mandate.

What makes the Corona virus difficult to differentiate from other yearly flu pathogens and an ordinary cold, is in the fact that it is difficult to diagnose. The chart on the next page shows why the Corona virus has been problematic for the medical professionals is that it has the same symptoms for the flu and common colds. This is doubly problematic since it mimics the exact symptoms that are associated with 5G EMF non-ionizing radiation electrical pollution. As such the Corona virus makes for a perfect cover for a sickness that has not received a lot of attention.

The rhetoric from Dr. Anthony Fauci was alarming given the fact that the Corona virus is virtually no different than the common cold. He made it sound as bad as the Spanish Flu, suggesting that he knows something more about what all might be in the virus.

CORONAVIRUS, FLU, COLD?

As the number of coronavirus cases rise, some key differences set coronavirus apart from the seasonal flu and the common cold — mainly the intensity of the symptoms and the recovery period. A guide at identifying the differences in the three conditions
All three, however, are spread by air-borne respiratory droplets and contaminated surfaces

CORONAVIRUS	SEASONAL FLU	COMMON COLD
Onset: Sudden	Onset: Abrupt	Onset: Gradual
Symptoms <ul style="list-style-type: none"> ■ Fever ■ Dry cough ■ Muscle ache ■ Fatigue 	Symptoms <ul style="list-style-type: none"> ■ Fever ■ Dry cough ■ Muscle ache ■ Fatigue ■ Headache ■ Sore throat ■ Runny or stuffy nose 	Symptoms <ul style="list-style-type: none"> ■ Runny or stuffy nose ■ Sneezing ■ Sore throat
Less common symptoms <ul style="list-style-type: none"> ■ Headache ■ Coughing up blood (haemoptysis) ■ Diarrhoea 	Less common symptoms <ul style="list-style-type: none"> ■ Diarrhoea ■ Vomiting 	Less common symptoms <ul style="list-style-type: none"> ■ Low grade fever ■ Muscle or body ache ■ Headache ■ Fatigue
WHAT THIS MEANS If you have a stuffy/runny nose or are sneezing, you likely DO NOT to have coronavirus		

That said, there is much more to this than what has been revealed by the media, medical, scientific, and researchers in the fields of molecular biology, virology, and bio-chemistry. Furthermore, Dr. Fauci has a shady past in his association with Dr. Robert Gallo back in the 1980’s and the creation of HIV AIDS cocktail of drugs that earned them both huge profits for what many believe to be nothing more than a laboratory pathogen creation.

That he stole the scientific paper written by Dr. Judy Mikovits and her superior, for which he had no right to demand, suggests he is a dishonest person. Dr. Mikovits has authored two books on exposing Dr. Fauci and the corruption within the CDC, NIAID, NIH, and the whole issue of vaccines. The CDC holds 57 patents on vaccines which are part of the schedule of vaccines required by children in order to attend school. Dr. Fauci was Jesuit-trained and by their own standards, once a Jesuit, always a Jesuit. I have shared much on the history of the Counter-Reformation Jesuits.

As Del Bigtree and Robert Kennedy Jr. have exposed, not a single vaccine has ever underwent “double-blind” studies for efficacy and safety testing. In 1989, Autism was virtually non-existent, at 1 in 10,000 children. In 2019, that number is now 1 in 24 male children, and 1 in 36 females have Autism. Robert Kennedy won a huge court case several months ago with the Pharmaceutical companies admitting they do no testing of new vaccines. Yet they reap \$5-billion or more on royalties by firms making vaccines from those patents. This is deeply alarming to both parents, and the general public because the pharmaceutical industry cannot be sued by victims’ families. Clearly the deck is stacked in favor of Big Pharma! Consider the odds for dying under the following criteria and ask yourself if it was not blown out of proportion?

The Coronavirus is NOT “20X deadlier” than the flu. That was evident once the early large-scale studies had been done in Germany, Iceland and South Korea. It has only become more so in the weeks since.

Far from the 3.4% predicted by the WHO back February, or the 1% used by the Imperial Model, all the serological studies done to this point average out at about 0.2%.

Here are some recent examples:

- On May 19th Dr. John Ioannidis, et al published their review of global cases, which found lethality ranging between 0.02% and 0.4%.
- On May 4th Dr. Hendrik Streeck, et al published a study done in Germany which found an infection fatality rate (IFR) of <0.36%.
- Another study from Stanford University, published on April 30th and this time focusing on Santa Clara County, found an IFR of 0.17%
- A study done in the Guilan province of Iran, published on May 1st, found an IFR of 0.12%.
- On April 21st, the University of Southern California (USC) published their study on the population of Los Angeles county, which found an IFR of <0.2%.

This list is far from exhaustive, yet raises serious misgivings about what is proving to be a highly misleading issue, and whether shutting down the country was justified by Dr. Fauci.

Although the numbers do vary from place to place – as you'd expect given changes in demographics, healthcare, methodology, sampling, population

IF YOU ARE BRAVE ENOUGH TO WALK ACROSS THE STREET WITHOUT FEAR OF BEING HIT BY A CAR, OR DRIVE A CAR WITHOUT FEAR OF A CRASH, OR EAT A MEAL WITHOUT THOUGHT OF CHOKING - - - YOU HAVE ENOUGH FEARLESSNESS TO BREAK THE LOCKDOWN/QUARANTINE AND NOT INCREASE YOUR RISK OF DYING	
CAUSE OF DEATH	ODDS OF DYING
Motor vehicle crash	1 in 106
Fall	1 in 111
Walk across the street, hit by car	1 in 541
Swimming, drowning	1 in 1,121
Eating, choking on food	1 in 2,618
Bee sting	1 in 53,989
Hurricane, tornado	1 in 54,699
Risk of dying of COVID-19 coronavirus in the next 3 months	90,263 deaths (as of May 18, 2020) in 328,000,000 US population or 0.000275 (almost 1 in 5000)... but wait!
Risk of dying of COVID-19 coronavirus if you have no pre-existing risk factors like dark skin (low vitamin D), diabetes, obesity, high blood pressure.... 73% of US COVID-19 deaths had these pre-existing factors....	So, deduct 73% of deaths, leaving 24,371 deaths among 328,000,000 = 0.000074 or 7.5 per 100,000 (or ~1 in 13,333)... but wait!
Risk of dying if you are under age 65 and you don't have dark skin (low vitamin D level) and you are not confined indoors like nursing home patients, and you aren't taking immune suppressant drugs = 1% risk...	Deduct 99% of deaths... = 902 remaining deaths among 328,000,000 = 0.0000027 or almost 3 in 1 million (1 in 333,333!)

density etc. – it's easy to see that not a single one of them comes anywhere near the 3.4% "officially" listed by the WHO, or even the 1% used in the Imperial

model, which was a dud as a model predictor. Dr. Fauci and Dr. Birx based their fear-mongering on a deeply flawed computer model, again lowering any credibility of the “king” of vaccines.

Other studies, done all over the world from Boston to the Czech Republic to Japan – have found the level of infection in the general population to be at least 10X higher than expected (and sometimes 100s of times higher).

Regardless of the specifics, ALL of the studies show that the danger of the virus was massively over-estimated. Given the variation by country suggests that more than one strain was released into the world. We know that the U.S. was hit with three strains, one through the west coast and two through the east coast.

Enough said on the Corona virus at this point and I want to move on to what may be the real reason for its release on to the streets of Wuhan, China. 5G technology has been around for a long time, as a weapons system. Its capability to disperse crowds and protestors or rioters is well established. U.S. Navy records from the 1950’s that have been declassified for many years show that its potential is much greater than anyone can imagine. Its introduction to the commercial Wi-Fi communications applications drives the Internet of Things (IoT) today. Experimental projects have produced driverless truck convoys, remote control of crewless railroad freight trains, just for starters.

5G was rolled out in the fall of 2019, with the following four cities identified as “model” cities of all 5G technologies:

Wuhan, China
Seattle, WA
New York City, NY
Milan, Italy

Be aware that the so-called Corona virus outbreak was first reported in Wuhan, China, initially became the focus of the media, almost at the point where the other three cities were silent. The first outbreak in the U.S. occurred in Seattle, WA. It was weeks before I read about the situation in Milan, Italy. Another term used to describe the 5G “model” cities is “Smart Cities.”

5G is now active in 35 cities and the ultimate goal is 117 markets in the U.S. The week before Memorial Day, Verizon announced it was activating 35 more cities throughout the U.S. We can look forward to a spike of virus infections in the coming months as cities light up these “Smart” cities with 5G communications.

B.N. Frank, writing for *‘Activist Press’* estimated NYC has an estimated 10,000 4G and 5G small cell towers in the city, despite illness, exposure warning and opposition. He reported on May 24, 2020.

In 2018, Dr. Naomi Wolf started reporting about New Yorkers who claimed that they and their pets had started [getting sick after 5G was installed](#) and turned on in their neighborhoods. Since then, illness from 5G has also been reported elsewhere (see [1](#), [2](#), [3](#)). Regardless, [small cell and 5G installation has continued](#) in NYC even though other American municipalities have been taken action to stop it or at least limit it (see [1](#), [2](#), [3](#), [4](#), [5](#), [6](#)).

Exposure to 5G (see [1](#), [2](#)) and other sources of wireless radiation (see [1](#), [2](#)) can [reduce immunity](#) and cause other health problems including [increased cancer risk](#). You'd think that would matter to a city still reeling from the pandemic. But it hasn't. Last month T-Mobile announced they would be ["supercharging" 5G](#) in "The City That Never Sleeps" without sufficient safety testing.

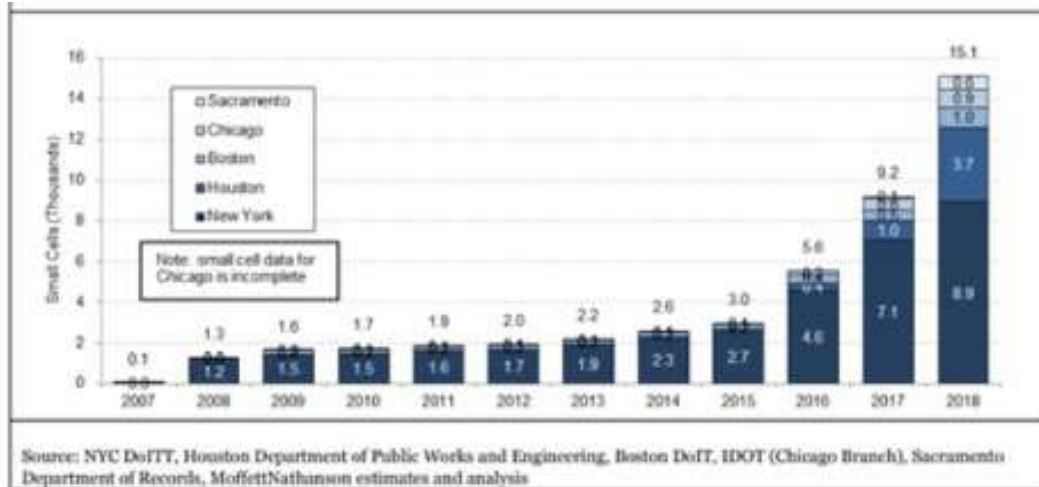

Recently [RCRWireless](#) reported about the city's estimated 10,000 small cells and their plans for more:

In January of this year, New York City regulators authorized a number of infrastructure providers to install small cell equipment on traffic and streetlights, bus shelters, public toilets and information kiosks in a deal that spans a ten-year period. But NYC has actually been focused on deploying small cells for nearly a decade, making it a crystal ball of sorts for future network deployments in other cities.

Specifically, the New York City Department of Information Technology and Telecommunications (DoITT) approved network expansion agreements with Crown Castle Fiber, Crown Castle NG East, Crown Castle Solutions, CSC Wireless, ExteNet Systems (ExteNet 1), ExteNet Systems (ExteNet 2), New Cingular Wireless PCS, New York SMSA Limited Partnership, Transit Wireless and ZenFi Networks. The agreements will dramatically increase 5G infrastructure, and therefore 5G coverage, across the five boroughs.

Comparing small cell growth across major U.S. cities from 2007 to 2018

According to MoffettNathanson, whose analysts tracked small cell installations across multiple U.S. cities, Crown Castle, ExteNet, Mobilitie and ZenFi appeared to have the strongest small cell presence in NYC in 2016, with Crown Castle maintaining a lead to this day and even managing to increase revenue from a single site by adding equipment from an additional carrier to an existing site originally built for another carrier.

In 2018, NYC had almost 9,000 small cells, a nearly 5,000 lead over Houston, its closest rival, and last fall, ZenFi CEO Ray LaChance estimated that the city now most likely has around 10,000 small cells.

On its [website](#), Crown Castle proudly makes it clear that its small cell deployments in NYC won't be limited to Manhattan, the city's most expensive borough. In fact, according to the company, 78% of its current nodes and 58% of its proposed nodes in the city are located in the other four boroughs.

Opposition to 4G and 5G small cells isn't isolated to [biological](#) and environmental risks (see [1](#), [2](#), [3](#), [4](#)). 5G threatens cybersecurity (see [1](#), [2](#), [3](#)), privacy (see [1](#), [2](#)), and more. 5G base stations also have a [tendency to overheat!](#) On page 14 are two photos of what can result from 5G EMF without cooling fans found on utility transformers and cell tower transformer equipment.

During May, 2020, two cities, one in Connecticut and one in Tennessee stopped 5G installation since there was no evidence to prove their safety. Many cities and [countries](#) have already taken action against 5G. This includes [banning it](#), filing lawsuits, issuing moratoriums, passing ordinances and resolutions.

Activist Post reports regularly about opposition to 5G and other unsafe technology. For more information visit the following websites.

5G cell antenna receivers come in all shapes and size, as small as the devices on the pole in the picture below on the next page.

Because 5G operates at higher energy levels, using millimeter waves, they require a point-to-point band, in urban areas, they will be mounted on virtually every building and structure facilitated to bounce radio signals all over. In residential areas the small cell antennas will be every 150 meters, virtually every other home on a street.

As people sign up for 5G installation, it will become impossible to hide from the spillover EMF non-ionizing radiation bathing the planet.

It comes as no surprise when NY Governor Cumo and Mayor Blasio were so vocal, demanding thousands of ventilators for the massive victims of the Corona virus, a hoax and cover to hide the real cause of a sickness with symptoms that resemble that of EMF radiation sickness. Governor Cumo intentionally put 4,500 recovering patients in nursing homes to further expose more elderly and people with health impaired immune systems, an invitation to infect even more people. This led to 5,800 nursing home deaths. There are public calls from New York that he should be prosecuted for his actions but the goal was to increase the death toll as a measure to hide or mask the effects of 5G EMF radiation sickness and death which would give the appearance of the COVID-19 lethality. As the statistics mount, from examples above, the charade has been exposed. Deaths as a consequence of 5G cannot be hid for-ever. When children are soon diagnosed with cancer from school Wi-Fi, as in the case of a Santa Rosa, CA school where 3 elementary school students and 2 teachers were diagnosed for cancer, the public will revolt.

The so-called “Smart Cities” coming will experience the imaginary sickness that is being fear-mongered upon the world that Wuhan, Seattle, New York, and Milan have to look forward with repeated examples of what has occurred in the four “model cities” for 5G technology.

It seems a good time to pause here and look back on the extraordinary past few weeks and try and draw conclusions.

First: who has the disease killed?

COVID-19 targets the old and the sick; this is not to be callous, but to understand the enemy and to provide context. The average age of those dying of COVID-19 in the UK was over 80, and fully a third are residents of care homes where average “stay” (a euphemism I’m afraid) was only 30 months from admission before the virus anyway.

Our statistics agencies are only now following Italy's lead and publishing the comorbidities of those dying from COVID-19, and it is now clear just how extreme is the amplification of risk. 95% of victims dying with COVID-19 have serious pre-existing conditions: not just background illnesses, but severe enough to be mentioned as causes of death on death certificates. Italy reported that 9

The most prevalent are dementia and diabetes (a quarter of cases, each), hypertension (a fifth) and serious lung, kidney or heart disease (around a sixth each). In both the UK and Italy, the average victim had three comorbidities severe enough to be causes of death on a certificate.

Second: who hasn't it killed?

Parents, unions and nervy adults fret about the risk, but there is little need. With no serious pre-existing conditions, the young and healthy are far more likely to be hit by lightning (49 occurrences per annum in UK) than to die of COVID-19 (33 in England under age 40, of which only 3 under the age of 19).

Panning out, among healthy under 60's (i.e. children and the vast majority of our working population), 253 people have died of COVID19 in English hospitals; this compares to 400 (non-suicide) drownings per year in the UK.

And taking all age-groups where there are no pre-existing conditions serious enough to be mentioned as contributory causes of death, COVID-19 has taken about 2/3rds the lives that British roads do every year, and we wouldn't think of outlawing driving, swimming or going outside in a storm.

Even taking all deaths where COVID19 is mentioned on the death certificate regardless of age or comorbidities, looking at the total toll: 43,000 lives is less than 2018's excess winter deaths and would count as a bad, but by no means remarkable, influenza year.

Scientific Context:

The UK Imperial College hasn't had a good war, and after their performance in other recent epidemics perhaps they will now pass their mantle onto another team. Preferably one that can code to levels fit for publication, never mind policy: it is increasingly awkward to hear the UK Prime Minister quoting their forecast that, were it not for lockdown, the UK could have been looking at half a million deaths when, at the tail-end of the epidemic, there are only 320,000 deaths worldwide.

But there is more to science than models, and the most accurate analysts were those who relied on other pillars of science than complicated models when input parameters were close to unknown ("garbage in, garbage out").

Science does not only proceed from models after all: it also has, inter alia, experiments, defaults (“null hypotheses”), controls and historical context.

In mid-March, Stanford’s Nobel laureate Michael Levitt (biophysicist and professor of structural biology) discussed the “natural experiment” of the Diamond Princess Cruise ship, a virtually perfect sealed petri-dish disproportionately filled with the most susceptible age and health groups.

Even here, despite the virus spreading uncontrolled onboard for at least two weeks, infection only reached 20% of passengers and crew (an “upper bound” to infection levels?); Levitt concluded that we must have high levels of innate immunity that can clear the virus. The Diamond Princess had been recently equipped with the latest 5G Wi-Fi Communications for sea travel!

And using very simple mathematics (not “15,000 lines of uncommented code” like Neil Ferguson) he demonstrated that the virus’s spread had never been exponential but rather has been running out of steam from day one. Who listened?

The eccentric biostatistician Knut Wittkowski came at things from a different angle, the “null hypothesis” angle – a default, in layman terms.

In the absence of evidence to the contrary, he assumed that COVID-19 was a normal viral respiratory disease, and at the end of March wrote a compelling but neglected paper showing how the emerging data backed up his view that “respiratory diseases [including COVID-19]... remain only about two months in any given population”.

As this deception has dragged on more and more scientists and medical people are slowly realizing they have been taken for a ride by a group of global elite. Remember the killer flu of 2000, and the lockdown after the Millennium super-spreader events? Me neither. COVID-19 might not be “just flu”, but that’s because there’s no “just” about flu. Within Sweden’s healthcare capacity without suspending civil liberties or shutting down schools or society (Sir Patrick Vallance’s “Plan A”), with no greater death-toll than our own. The Free Swedes pointed out all along that lockdown would be much easier to get into than out of: no kidding, we’re in an eel-trap.

We also have ‘controls’, since not all countries have behaved the same. Neither Sweden nor Japan has locked down so, if the lockdown hypothesis were true, Stockholm would by now be a morgue and Greater Tokyo (population 38 million) a necropolis.

A leading Harvard doctor says coronavirus is NOT as deadly as feared because only a small number of contained cruise ship passengers have died and only 0.001% of China's average 25,000 deaths a day are from the virus.

- **Dr. Jeremy Samuel Faust said people should not be anxious about the outbreak and stop hoarding food and masks**
- **He claimed that the coronavirus death rate is less than 1 percent – far lower than the World Health Organization's alarming figures of 3.4 percent**
- **The doctor slammed the 'frightening numbers' which overstate the risk**
- **Faust said that looking at the doomed Diamond Princess Cruise ship gives a better indication of how fatal the disease is than global statistics**
- **Around 705 passengers out of the 3,711 on board the cruise ship caught coronavirus**
- **Only six people from the boat have died, giving a death rate of 0.85 percent, and all deaths are in people over 70**
- **He casts doubt on China's death toll, saying many happened in areas where the death rate is already higher than the norm and respiratory issues are rife**
- **He also pointed out that 25,000 people die in China every day, while just 25 coronavirus deaths were reported per day at the height of the outbreak**
- **Instead of stockpiling food, Faust said the public should be helping the elderly and infirm who are most at risk**
- **Coronavirus symptoms: what are they and should you see a doctor?**

A leading Harvard doctor has claimed that coronavirus isn't anywhere near as fatal as people fear, saying the real death rate is less than 1 percent – far lower than the World Health Organization's alarming figures of 3.4 percent.

Dr. Jeremy Samuel Faust, emergency medicine physician at Brigham and Women's Hospital in Boston, and an instructor at Harvard Medical School, said people should not be anxious about the outbreak and stop hoarding food and masks in preparations to self-isolate, in a post he penned for Slate.

Initial reports suggested about two to three percent of people who get the disease will die, similar to the 1918 Spanish flu pandemic which wiped out over 50 million people worldwide.

The World Health Organization has upped the figure further to 3.4 percent.

While directors of the National Institutes of Health and the Centers for Disease Control and Prevention have given a lower rate of 1 percent.

However, Faust said that the real case fatality rate, known as CFR, is actually lower than each of these reports.

He said that looking at the Diamond Princess ship gives a better indication of how fatal the disease is than global statistics because it provided a controlled environment to study how the disease spread.

The doctor slammed the 'frightening numbers' for the global death rate of coronavirus which is not only conflicting but massively overstate the risk to people.

'We know that all but one patient boarded the boat without the virus. We know that the other passengers were healthy enough to travel. We know their whereabouts and exposures.'

Around 705 passengers out of the 3,711 on board the boat caught coronavirus.

More than half did not show any symptoms or signs of illness.

Six people from the boat have died, giving a death rate of 0.85 percent, Faust said. The total infections and fatalities on the Diamond Princess were later found to be many more than that above. In my article "[The Best Wi-Fi At Sea](#)", the data tracked for many weeks after the initial out break at a time when the Diamond Princess was not permitted to dock at various countries.

However, he added that not a single death among passengers has been in a person under 70, showing the rate is lower still in younger cases.

If you notice nothing is said by Dr. Faust concerning the Diamond Princess recently outfitted with the advanced 5G Wi-Fi communications which cruise ships were quickly advertising Wi-Fi packages for cruise passengers.

What is still unknown and I have been unable to find data, is [the location of the state rooms of passengers that were infected and those that died](#), and [whether they had purchased the Medallion Class Wi-Fi package](#). It is an option package for cruise passengers that can cost up to an additional \$100 for 30 days, and price is based on package for phone, Wi-Fi, and data. [This information would prove to be of great importance](#). A floor plan indicated the Diamond Princess has 17 deck levels; however, not all deck levels may have state rooms.

The fact that those passengers who died were 70 and older, correlates with data from all the other countries who were confirmed Corona virus victims. The authorities were guilty of manipulating and miss-reporting the data through terminology. [5G radiation sickness is a factor in lowering a person's immunity and also affects those with existing health issues](#). Shortly after the outbreak on the Diamond Princess, the U.S. government recommended that elderly should not take cruises. The cruise ship industry is discussing the possibility of requiring those aged 70 and older be required to have a physician's exam certifying them fit for making a cruise.

Princess Cruises' high-speed Wi-Fi will be available on 15 ships by the end of 2020, with seven more ships receiving MedallionNet in the next year.

MedallionNet, part of the line's OceanMedallion technology, was available on Sky Princess, which debuted in October 2019, and Enchanted Princess, when it launches in June 2020.

Like a microwave oven, 5G at 60 GHz, absorbs/disturbs/perturbs 98% of the oxygen in cells, whether reheating meat or cooking a human being. What this means is that blood can no longer transport oxygen through the body efficiently. This affects everything. With young, fit Chinese men and women collapsing in the city streets on many video clips, this is a sign of edema, and of altitude sickness that climbers get at the top of Mt. Everest. Brains starve to death due to lack of oxygen. ER doctors noted this fact and said ventilators were doing the opposite of what they were intended to do.

The President's "Warp Speed" plan to vaccinate the nation with an unproven, potentially fatal vaccine is outright insanity. Judy Mikovits stated such a plan could kill 50-million people in an interview with Brian Willaims of RealLondon TV recently interviewed Dr. Judy Mikovits, then Dr. Sherry Tenpenny about the coming fast-tracked COVID vaccine. These videos have been scrubbed from YouTube and many other platforms. **Vaccines do not prevent infection.**

The above aerial view of the Diamond Princess shows its six dome-shaped 5G Wi-Fi antennas, 2 forward, 2 mid-ship and 2 aft. Ship-equipped 5G are always encased in those large white globes, which are protective shields to protect against the elements of the weather.

When the Diamond Princess left the port of Yokohama in Japan on January 20, the 2,666 passengers on board was ready to unwind with a trip to China, Vietnam and Taiwan. But two weeks later they'd find themselves confined to their cabins, allowed out for only a few hours each day, while 542 of their fellow passengers and crew tested positive for Covid-19 – the novel virus that has infected millions of people worldwide.

While the Covid-19 outbreak has been slow to take hold outside of China, the Diamond Princess has been a hotspot of infection. Of all the confirmed cases outside of China, more than half of them were on the cruise ship. Singapore, the country with the next-highest number of cases, has just 77 confirmed infections. This is how a pleasure trip in East Asia turned into a battleground in the fight against a deadly epidemic.

For more than two weeks, the passengers of the Diamond Princess have swapped three-course dinners for boxed meals doled out three times a day by crew in masks and gloves, prepared by a temporary kitchen set up on shore by a charity that normally supplies meals during natural disasters. The casino is shut, but the creaky Wi-Fi remains available, and Amazon deliveries are reportedly making it on board, although the alcohol started to run out midway through the quarantine.

While the official quarantine was set to end on February 19, most of the passengers will require further patience as they faced a further two weeks in isolation when they return to their home countries – and for those unlucky enough to catch Covid-19, a stint in hospital.

On February 1, a passenger who had disembarked five days earlier in Hong Kong was diagnosed with Covid-19. The ship's voyage was paused on February 4 by health authorities for 24 hours for a health check, but Princess Cruises quickly cancelled the entire trip, docking in Yokohama to give more time to check passengers and crew. Ten passengers were found to be infected, and taken ashore for medical treatment.

Two days later, the number of infected had risen to 41, but the Japanese Ministry of Health believed at the time no further tests were required. The remaining passengers were asked to quarantine on board, with the cruise company offering free internet access, switching on additional satellite TV channels, and offering those in rooms without any windows a chance to get a breath of fresh air on deck now and then. Passengers tweeted photos of flowers, chocolates and other gifts handed out by staff, including games and cards for children.

"We hope these gestures will lift the spirits of those onboard in this difficult time," said Rai Caluori, EVP at Princess Cruises, in a written update at the time. Official updates were shared via notes printed out and slid under cabin doors, while passengers left thank-you messages for crew pinned to their doors, but also turned to social media to share their boredom, frustration, and anxiety.

On February 8, another six cases were found, and a day later, a further 66. Princess Cruises told passengers it will refund all their costs, including air travel, not charge for anything onboard during the lockdown, and offer a free cruise in the future — should anyone want to take that up. The cruise company also offered passengers the option to complete their quarantine at a shore-side location, but stressed they had no medical staff and all food would be Japanese style bento boxes; those who do disembark are tested for the virus first.

Shortly after, the U.S. announced it would repatriate American passengers; one passenger who opted to remain on board reported hearing chants of *"USA!"* and *"get me off this ship"* when their departure came. Infections continued to pile up, with 169 new cases the day before quarantine was supposed to end. An Australian doctor, tweeting about her parents quarantined on board, said: *"He was tested and negative upon confinement but now positive. Confinement isn't working."*

In total, 542 people have been infected with the illness, despite the lockdown on-board. Does that mean the quarantine didn't work? *"The primary reason for the quarantine was to stop potentially infectious people then spreading infection*

further around the world as they continued their holidays or returned home. In this regard it would appear that the quarantine has so far been successful," says Paul Hunter, professor in medicine at the University of East Anglia, in a statement provided by the Science Media Centre.

The Westerdam cruise ship docked in Cambodia to allow passengers to disembark; it was only after they'd scattered home that an infection was spotted. On board the Diamond Princess, the virus didn't have so far to travel. *"With the high number of cases reported in the past few days it would appear that measures to prevent spread amongst passengers and crew after quarantine was imposed were ineffective,"* Hunter says.

Those stuck on the luxury cruise liner won't want to hear that – especially Britons like David and Sally Abel, who have used YouTube videos and Facebook to call on the government to charter an evacuation flight; the couple then tested positive for coronavirus. Now, the British Foreign Office has said: *"Given the conditions onboard, we are working to organize a flight back to the UK for British nationals on the Diamond Princess as soon as possible."*

There are three ways the quarantine could have failed those onboard, says Bahrat Pankhania, public health lecturer at the University of Exeter. First, some people may have been exposed to the virus before the ship was locked down – after all, there was at least one sick passenger who disembarked in Hong Kong, and ten more a few days later. *"Then slowly over a period of time they became infected,"* Pankhania suggests.

The second option is that the virus has spread despite the quarantine. Given the precautions, such as passengers keeping to cabins, staff delivering meals wearing masks, this would hopefully be unlikely, but most of the 1,045 crew share bedrooms and tables of 14 for meals – with Princess Cruises only asking them to leave a seat between them ten days into the two-week quarantine, according to one report from Time. One crew member who developed a fever was told to stop work and self-isolate in their cabin – which they shared with another member of crew, who continued to work. The roommate has since tested positive for coronavirus.

The spread could be exacerbated by passengers not following rules. The chants of "USA!" allegedly came from a woman standing on her balcony, not wearing a mask despite talking to a passenger on an adjacent balcony a few feet away, reported another passenger, Matthew Smith. *"If there are secondary infections onboard, this is why: idiots who don't know any better,"* he said on Twitter.

There's a third route for infection that is concerning, which Pankhania says has precedent but remains a theory: the air conditioning system linking cabins. That idea was explored after the SARS outbreak, with researchers trying to account for how the disease spread between people without direct contact in one hotel. *"An*

infection occurred which moved from the bottom of the building to a distant part of the building via the air conditioning system, infecting people very distant from each other," he says.

There are a few caveats, complicated by the fact there's plenty we still don't know about this novel coronavirus. So far, Sars-CoV-2 appears to travel via droplets – what's expelled from your face when you cough or sneeze – which is why authorities are working on the assumption that you need "close contact" to spread the virus, which means being within two meters of someone for 15 minutes. For example, one infected woman took a five-minute Uber trip to the hospital, but the driver shouldn't be at risk.

And that may still be the case with this scenario. Because the cabins are small and passengers are spending all their time in them, even a tiny amount of the virus in the room could equate to prolonged exposure. *"People are cooped up in cabins that are very small, with not a lot of air movement, especially if you've adopted the lock down instructions," he says. "The only exchange of fresh air is the air conditioning systems that do not necessarily have proper filters."*

While evacuation may be welcome to passengers, Pankhania warns that filling a hotel with potentially infected travelers has the same risks as the ship – they too can have weaknesses in quarantine and also feature air conditioning. Because of that, he says that anyone at serious risk of infection, such as those on the ship who may have been exposed for a long time, should be more carefully watched for symptoms. If they develop, they should not be allowed to stay in the hotel, but taken to hospital, to avoid infecting others. *"Being in the hotel is the same as being on a ship, to be honest – the room is a little bigger," he says.*

The cause of the continuing outbreak on the Diamond Princess could be any of those options – or all three at once. One as yet unanswered question is why passengers would be quarantined on a cruise ship, notorious as they are for spreading disease. Data from the US Centre for Disease Control shows ten outbreaks on cruise ships last year, eight of which were norovirus. *"Cruise ships are very prone to outbreaks of common cold and the vomiting virus, norovirus,"* notes John Oxford, professor of virology at Queen Mary University, London, in a statement from the Science Media Centre. *"Invariably the ships are overcrowded and with so many passengers hygiene levels can slip... In fact it might be impossible to properly quarantine people on a ship. I am sure that passengers will need to be quarantined properly when they return home."*

Princess Cruises, the company that owns and operates Diamond Princess, said it had no comment. Andy Harmer, UK and Ireland director at Cruise Lines International Association – a cruise industry trade body – said there are specific health standards for such ships, including health screenings for passengers and crew, as well as medical staff onboard. *"All crew are extensively trained on how to help keep ships, guests and crew sanitized. Ships are visited by the Vessel*

Sanitation Programme (VSP) who conduct public health inspections on how well cruise ships meet health standards in the VSP operations manual. Furthermore, CLIA cruise lines are well-equipped and experienced in maintaining health surveillance of passengers and crew."

But regardless of the efforts of those onboard or the specific reason the quarantine failed, the clear fact that it was not working means authorities should have changed tack, Pankhania says. *"They put infection control containment procedures in place, and they got new cases. I would have had to say, 'this is not working, I need to think of a Plan B'," he says. "I think that ship is transmitting an infection, and I wouldn't want to hold them in containment there... it's wrong."*

As of 2 May 2020, **over 40 cruise ships have had confirmed positive cases of coronavirus on board, and one cruise ship remains at sea with passengers on board: Artania, with 8 passengers who are scheduled to disembark at Bremerhaven, Germany, around 8 June 2020. In addition, over 100,000 crew members remain on cruise ships, some in isolation. Many are unable to be repatriated because cruise lines refuse to cover the cost of doing so, and because countries have different and changing rules. The condition is stressful to many employees. Multiple suicides have been reported.**

When I wrote my articles on **"The Best Wi-Fi At Sea" on April 17, 2020, and Part 2 on April 30, 2020, some 32 cruise ships had experienced out breaks of the so-called Corona virus around the world's oceans and sea lanes, many of which never got within 3,000 miles of China.**

The Princess Cruise Line has invested \$450-million to upgrade their fleet with 5G Princess Medallion system for 5G Wi-Fi.

So what about the *Diamond Princess* cruise ship fiasco? Well guess what, the cruise ship offers state-of-the-art internet access which is transmitted using some of the most advanced technologies currently available. While it's not by definition 5G, it is using exactly the same mm-wave technology at the 60GHZ range using the MedallionNet Wi-Fi system. 4G differs only slightly and brings with it similar health issues. Cell phone radiation has been documented from the time of the commercial marketing in 1996. Dr. Arthur Firstenberg chronicles the history of Cellular EMF in his book, *'The Invisible Rainbow'*. I will be including below recent comments by Dr. Firstenberg as recent as May, 2020.

So this could just be a coincidence, right? Indeed, it could, however when you begin to look into 5G, particularly when its running within the 60-Ghz range, which 'coincidentally' all the above-mentioned Coronavirus hotspots are, well those 'coincidences' begin to start looking a lot more like a problem.

60GHz – Frequency of the beast?

At the millimeter wave frequency of 60GHz, the absorption is very high, with 98% of the transmitted energy absorbed by atmospheric oxygen.

While studies on the effects of these millimeter-wave absorbed Oxygen molecules have not currently determined any health risks, they do recommend further study as the current studies don't exceed exposure for longer than 24 hours.

"In conclusion, our results indicate that exposure to low-power radiations around 60 GHz does not cause any significant effect. However, they do not exclude a possibility of existence of local subcellular effects or effects potentially induced by prolonged exposures. Moreover, we cannot neglect possible synergistic effects and eliminate the possibility that other exposure parameters, like frequency, exposure time, or field polarization may have effects on Biosystems. Therefore, additional gene markers and radiation parameters should be further analyzed for an extensive investigation of the potential biological effects of millimeter waves." – [SOURCE](#)

The above is the conclusion from what the scientists involved described as a long-term study into the effects off millimeter waves on biological cells, however once again the study was just a mere 24 hours. Hardly long term!

In another study though they did find that emission of 61.32-Ghz MMW's on mice stimulated regrowth of tumour cells and induced an inflammatory response:

Makar and collaborators demonstrated in mice irradiated at 61.32 GHz (31 mW/cm²) that MMWs can restore tumournecrosis factor-alpha (TNF- α)production, which had been inhibited by an anti-cancer drug treatment.

This TNF- α production by peritoneal macrophages was accompanied by a significant increase in interferon-gamma (IFN- γ) release by splenocytes and enhanced proliferative activity of T-cells[34]. However, it is well known that IFN- γ , synthesised by lymphocytes, markedly increases TNF- α production in monocytes and macrophages.

The same authors have also shown that 42.2-GHz MMWs at 31 mW/cm² can up-regulate natural killer (NK) cell functions[35]. In conclusion, we can assume that MMWs enhance proliferative activity of T-cells and stimulate inflammatory response through TNF- α and IFN- γ up-regulation. – [SOURCE](#)

The following looks at some charts from the 1960's which looks at the complete frequency spectrum and the different dangers and use cases across the scale.

There is not just one potential risk to the usage of these frequencies, they open the door to a whole host of problems from nefarious parties implementing mind control through to infertility and environmental genocide.

It is true though however that much of what is being suggested as potential issues do not have the sufficient studies to back them up, but it is also true that there is not a single safety study on the effects of 5G to date.

That's correct, while the World competes against one another to be the first to get 5G rolled out, they are doing so without any safety studies in place to ensure the safety of this technology. This is the study, we are the test subjects.

5G Will Devastate Humanity But Those Behind It Are Above The Law!

Dr. Barrie Trower, a former Royal Navy Microwaves Weapons Expert talks about the dangers surrounding microwave radiation and more specifically, 5G. He has excellent videos presenting the evidence and discussing the dangers of 5G to all life forms.

Trower's credentials are continually under scrutiny, which is to be expected when you go up against a multi-trillion dollar industry – however, it must be said that to date I have yet to find a solid debunking on his expertise and knowledge. So far we just have allegations that he isn't the expert he claims to be, but with no evidence to prove as such.

Do not mess with oxygen! 60-Gigahertz specifically has been found to alter the behaviour of oxygen molecules. You need to understand this chart. The following graph shows you the frequency spectrum and oxygen absorption levels:

When you hit oxygen molecules with 60-GHz millimeter wave emissions it affects the orbital properties of the electrons of the oxygen molecules. The energy level causes the molecules of the lungs to dance making it impossible to bond with the red blood cells.

We then breath these effected oxygen molecules into our lungs which is then passes through bound to red blood cells using a protein called haemoglobin, this protein consists of four iron atoms, which in turn can bind four atoms of oxygen the blood cell.

Now, exactly what the effects of these charged oxygen molecules is relatively uncharted territory, but what we do know is that the lungs work most efficiently when they are receiving oxygen in its natural state, MMW charged oxygen molecules will not bind as well to the iron atoms in the haemoglobin, in fact there is suggestion that these oxygen molecules may be repelled by the iron.

The effects on the body because of lack of oxygen are:

- Fever
- Fatigue
- Dry Cough
- Myalgia

- **Dyspnea**
- **Diarrhea & Nausea**
- **Respiratory Shut down and Death.**

Going back to the Coronavirus videos of people literally falling over in the middle of the street, could this be explained by a lack of oxygen? It certainly could.

The literature on Magnetic Biology is vast and extremely technical, few work in the field but we will try to get a better understanding of just how these oxygen molecules could affect our ability to absorb oxygen – once we have more on this we will update this post.

The Corona virus COVID-19 may simply be a modified SARS virus which was held at the WUHAN laboratory which was INTENTIONALLY released to cover up a frightening reaction people began getting from the emissions of this new 5G technology. This is becoming increasingly the conclusion by many scientists from a wide range of professional expertise.

Yes the virus clearly exists, its genetic structure was publically released back in December, but why is it only affecting isolated groups of people so severely, but in the majority of cases it hardly affects the infected – in fact many contract the virus with no side effects whatsoever. This may be explained by the fact that virologists had detected three strains entering the U.S. early on, one from the west coast and two from the east coast; again an indicator of the virus being weaponized. The media has been totally silent on this reality.

This dangerous new genetically modified virus was created by researchers from the University of North Carolina, the Harvard Medical School, the National Center for Toxicological Research, Food and Drug Administration in Arkansas, the Bellinzona Institute of Microbiology in Switzerland and the Wuhan Institute of Virology in China, who were working together and subsequently published their paper. The Rothschild-owned Pirbright Institute in Surrey, UK exploited the collective work in order to provoke a war between China and the U.S.

Could this simply be a cover up to protect the validity of 5G technology? Absolutely! Explain this coincidence if I am wrong. Perhaps 5G and a bunch of real viruses were launched simultaneously.

In Wuhan, there really was a 5G mass test. They installed 3,000 large and 27,000 small transmitters. The test time coincided with the spread of the coronavirus.

On February 3, 2020, the same day the Diamond Princess was quarantined, the satellite company SES put out a press release advertising “the best Wi-Fi at sea” and announcing that Princess Cruises would be using a “hybrid medium earth orbit (MEO) and geostationary (GEO) network” to become “the first cruise ships

to access SES's ground-breaking O3b mPOWER satellite-based communications system."

mPOWER uses beam-forming technology and frequencies from 17 to 30 GHz and SES boasts that its satellite system is part of the global 5G network. *"We offer the fastest Wi-Fi on the high seas making it easier for you to stream movies, stay connected on social media and even text with friends and family on board with you!"* advertises Princess Cruises. **Each Princess Line ship has 7,000 sensors, 650 wall-mounted touchscreen devices, 1,780 Wi-Fi access points, 4,030 digital displays in private rooms, and 75 miles of cable.** The antennas on the ships that communicate with the satellites are huge globes that look like this:

mPower was operating on the Diamond Princess at the time of the coronavirus outbreak. A photograph of the Diamond Princess on February 5, 2020 while it was quarantined in Yokohama shows the five of the six antenna globes that it had on board.

The media is cooking up a fearful frenzy to hide the health dangers of 5G technology. The left naturally is blaming all this on President Trump. This is now an apolitical crisis, affecting us all regardless of who, what, when, where and how and it is wreaking havoc on the markets. Dr. Kirk Elliott discusses this on the Global Financial Reset weekly report.

The U.S. Navy says 16 sailors from the USS Theodore Roosevelt who had apparently recovered from the coronavirus and had received negative test results have now tested positive for a second time. In a statement released earlier on Saturday when five sailors were found to have retested positive, the Navy said

the sailors had "met rigorous recovery criteria, exceeding CDC guidelines," including testing negative for the virus at least twice, but have now retested positive.

The USS Theodore Roosevelt had been stuck at port in Guam since late March, for seven weeks when the coronavirus first wreaked havoc upon the ship. Since then, over 4,000 of the 4,800 crew members have had to go ashore for quarantine or isolation. Since the outbreak began, at least 1,156 sailors have tested positive for COVID-19, including two deaths, Aviation Ordnanceman Chief Petty Officer Charles Robert Thacker, Jr., who died in an intensive care unit at a Navy hospital in Guam on April 13. The other sailor was a 41-year old Communications Specialist, who worked in the bridge of the Roosevelt's communications system.

In the above photograph of the USS Theodore Roosevelt, I counted no fewer than five of the typical white globe 5G antennas. How will the Pentagon be able to hide the real cause of the sickness of these sailors, and future outbreaks of their so-called Corona virus? How will they mask the real cause, especially when there is a veterans group seeking compensation for the damages occurred while in the military as radio/radar technicians, fighter pilots who literally sat on the aircraft electronics components.

"These five sailors developed influenza-like illness symptoms and did the right thing reporting to medical for evaluation," said the Navy in a statement released on May 15. According to the Navy, the five re-infected sailors self-monitored and adhered to proper social distancing precautionary measures. Once they tested

positive again, they were immediately evacuated from the ship and put under isolation, including 18 other sailors who were also in contact with them.

Jonathan Hoffman, a spokesman for the Pentagon, said that the outbreak on the USS Theodore Roosevelt has been “a learning process.”

“This is a very stubborn, infectious disease,” Hoffman told reporters during a press briefing. He further went on to praise the Navy’s quick action, which most likely helped prevent the whole crew of the aircraft carrier from being exposed for a second time.

An official familiar with the USS Theodore Roosevelt’s situation said that the ship’s commanders aren’t entirely sure why the five sailors tested positive twice. However, the official did suggest that it may be related to questions about the accuracy of COVID-19 testing kits. Although true in many cases, it becomes another excuse after excuse!

The sailors are tested using a nasal swab. In some cases, the coronavirus cannot be detected through this test. Health officials aren’t certain whether the five sailors did relapse or if they tested negative without really being fully clear of the virus.

In response to the possibility of a second outbreak, the ship’s commanders have intensified screening programs. Anybody who exhibits any flu-like symptoms will immediately be tested, evacuated and put under isolation. An investigation report has been turned over to the top Navy command, but no public comment has been given. It will be interesting to see how they hide 5G as the real cause.

As of May 14, over 2,900 sailors have re-boarded the ship, and around 25 percent of the crew that tested positive for COVID-19 have recovered.

The USS Theodore Roosevelt resume operation after 55 days sidelined in Guam. On May 20, after 55 days of being stuck at a port in Naval Base Guam, USS Theodore Roosevelt finally left harbor with more than half of its over 4,800 crew members. Navy officials told USNI News that the ship’s first deployment will most likely be brief and consist of the crew performing basic drills, which will certify whether the sailors can once again handle work on the aircraft carrier after an extended period of time away from the sea.

The process of returning the USS Theodore Roosevelt’s sailors back to the ship began at the end of April. Sailors who were deemed healthy spent at least 14 days in isolation in Guam. Furthermore, they had to test negative for COVID-19 twice in a row. As of Sunday, May 24, 2020, over 2,900 sailors had returned to the carrier.

The length of the USS Theodore Roosevelt's stay at port means that the whole ship has to re-qualify to operate as a team before they can return to full active deployment.

The commanders of the ship, in a statement, said that the ship will be leaving sailors who are not required to participate in these evaluations. The men and women left behind will be tasked with supporting the recovery of the rest of the sailors who are still in isolation or quarantine.

During this time, the Navy has ordered the ship to enforce strict social distancing and very thorough cleaning protocols.

***"It feels great to be back at sea,"* said Rear Admiral Stuart Baker, commanding officer of Carrier Strike Group (CSG) 9, which the Theodore Roosevelt is a part of.**

Despite the fact that five sailors tested positive upon returning to the ship, Surgeon General of the Navy, Rear Adm. Bruce Gillingham, remains confident that the carrier is "medically ready" to return to active duty.

It remains to be seen if the Navy would put the USS Theodore Roosevelt back in active duty after the new infections, but if the Navy's testing kits weren't properly audited, many false negatives may come back on ship and re-infect dozens more sailors, giving them another excuse to hide 5G EMF issues.

I found the USS Theodore Roosevelt and USS Kidd are not unique for the outbreak of the so-called Corona virus. The following U.S. Navy ships have had out breaks of what is being blamed on the Corona virus:

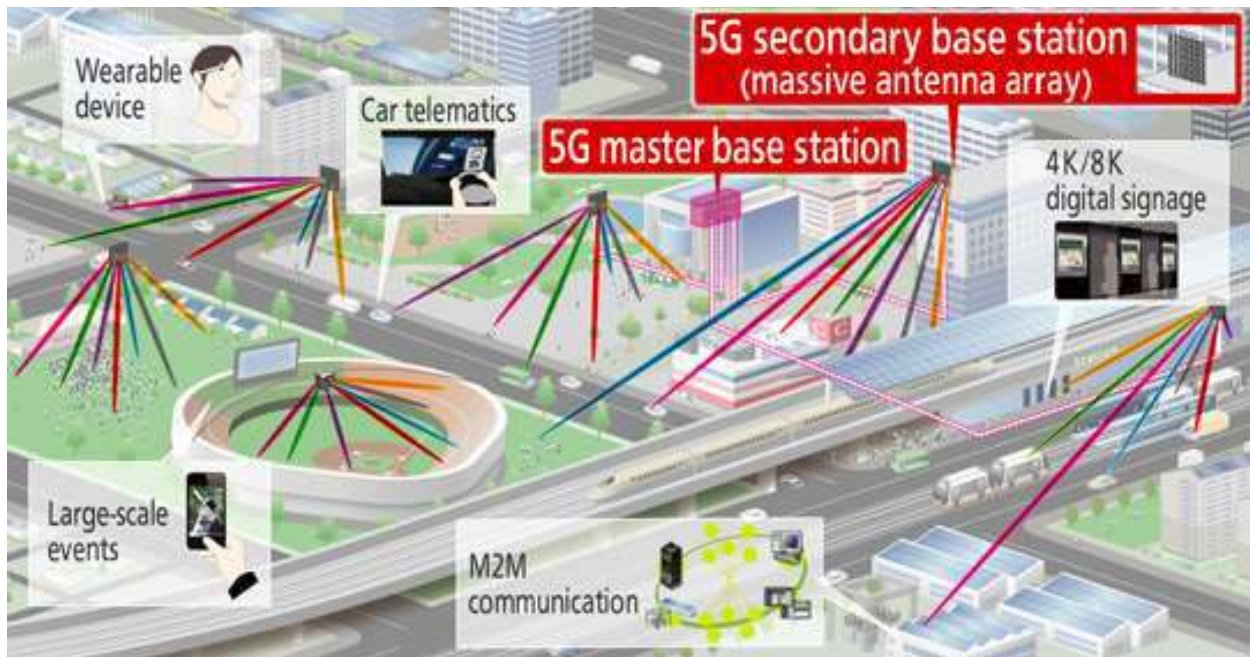

**USS Boxer – 2
USS Essex – 3
USS Ralph Johnson – 1 (photo below, pg. 33)
USS Coronado – 1
USS Carl Vinson – 1
USS Theodore Roosevelt – 1,156 (2 deaths)
USS Ronald Reagan – 16
USNS Comfort – 2
USS Nimitz – 2
USNS Mercy – 7
USS Tripoli – 24
USS Kidd – 96
USS Leroy Grumman - 52**

All of the above listed U.S. Navy ships sport the 5G white globes used to shield the 5G antennas from the weather elements. The variation or number of infected seamen is most likely related to the EMF energy level of the ship's 5G Wi-Fi communications.

Even Verizon states that not all 5G are the same. With ultra-fast speeds, ultra-low latency and massive capacity, Verizon 5G Ultra Wideband is built right with the power to change more than your phone. It will change everything. The most important thing to remember is that all wireless 3G, 4G, or 5G is “modulated”. I learned this three years ago from an installer of cell equipment, that the telecoms operate their wireless communications equipment and systems at the lower level side of its capable power range, so as not to accidentally harm life.

I will repeat the most important thing to remember is that all wireless 3G, 4G, or 5G is “modulated”. This answers many questions about the Wuhan, China outbreak.

In the illustration above you can see that 5G uses what are known as master base stations and secondary base stations. These master and secondary base stations enables the telecommunications carrier to “modulate” energy signal strength to meet the various user needs in the illustration. This modulation of signal strength explains why it is possible that some get sick and others die. In China, all Chinese citizens were vaccinated a month before the virus outbreak. All vaccines weaken and compromise the human immune system. The U.S. Navy confirmed the annual flu shot lowers the immune system by 36%, and increases one’s susceptible to getting sick from the flu shot.

The Earth is being bathed with both wide-band and millimeter-band from what will be 40,000+ satellites in Low and Medium orbit (LEO and MEO),

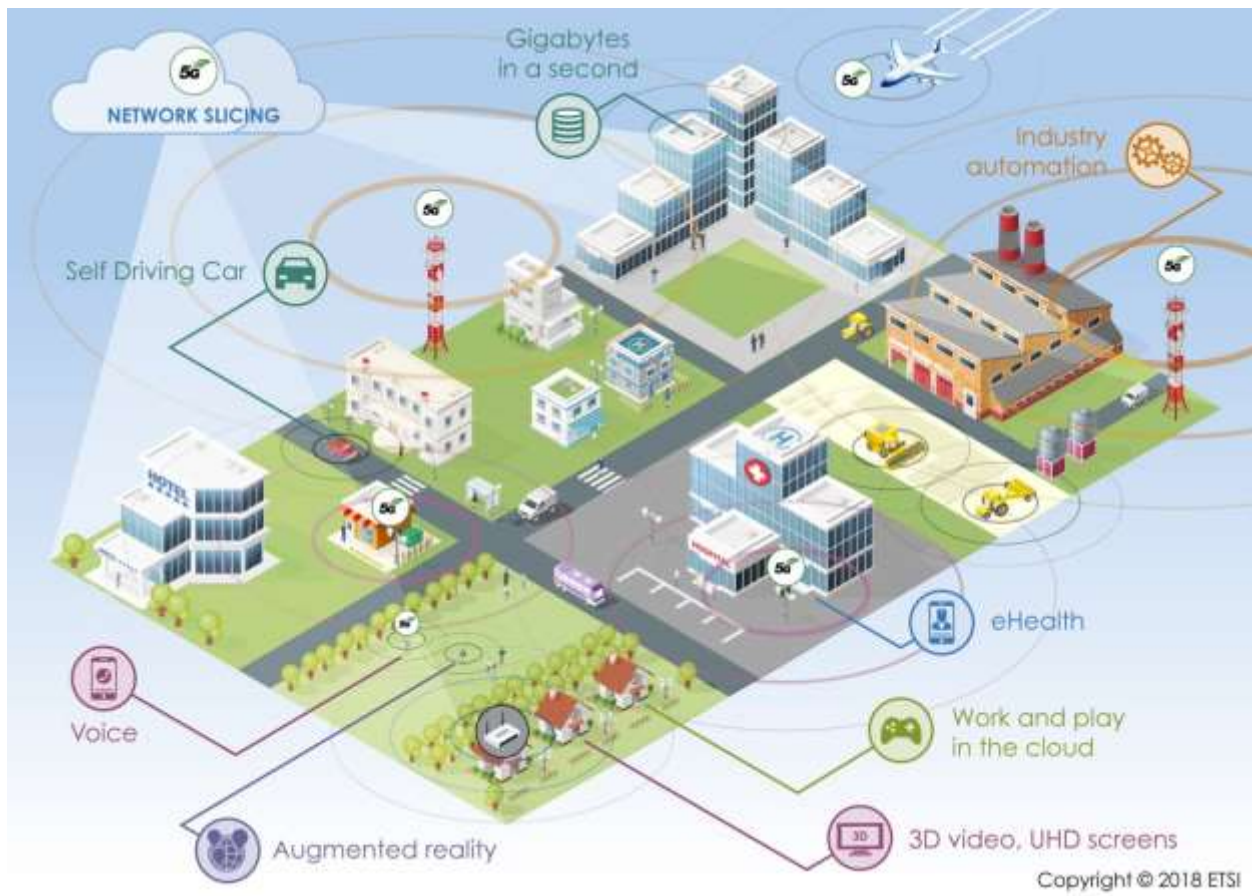

Verizon 5G Ultra Wideband has the power to deliver speeds more than 10 times faster than some other 5G networks. Verizon is turning on “Smart Cities” with 5G at an incredible pace. By early 2021, it will cover 117 markets in the U.S. It all looks so fabulous until you realize that EMF wireless energy is also the cause of so many illnesses that have been labeled in the past twenty-four years.

The evil aspects of 5G are immense. It can be used to control society, keeping people locked in their homes, virtually much like the invisible fence homeowners

install to keep their pets from leaving the property to wander in the neighbor's yards or run away. My neighbor across the street from me put the invisible fence in for his two dogs when he purchased the property four years ago.

Download from [Dreamstime.com](https://www.dreamstime.com)

The thing people fail to understand that 5G is a weapons system, designed and capable of killing you! The capabilities of this technology will astound the reader. The invisible space fence from space is just for a starter. There are different types. GPS wireless fences work on cellular technology. They set geofences, which specific boundaries are set by you for your pet on the satellite map. The GPS of the system alerts you when your dog crossed the boundaries and helps you track it easily. The inground or above ground send an electrical shock to your pets which condition pets not to cross the invisible fence.

Think about how 5G EMF can and will be used to keep people locked in their own home in the UN's New World Order. The UN activated their web page just a week or so ago and it goes by that title.

Verizon's 5G system will see a major upload boost as the company switches from 4G to 5G to send files and stream video. The company is also finding new ways to get its 5G to reach indoors.

Video calls on Verizon 5G are about to get even smoother. The company announced today that it's finally switching uploads from 4G to 5G in its 34 5G cities (with a 35th one coming soon), as well as for Chicago-based 5G Home subscribers. It also made several announcements about partnerships to help its short-range millimeter-wave 5G reach longer distances and get indoors, although those shifts won't happen immediately.

5G is a new technology, but it's still highly dependent on 4G. Current 5G networks are known as "non-standalone." Phones rest on 4G networks, and have to use 4G to negotiate 5G connections. Until now, Verizon's and AT&T's 5G networks also generally used 4G for uploads.

Uploads have become a hotter topic recently as more people are transmitting video in their quarantined lives. Verizon said on May 14 that collaboration tools, which use uplink, are at [1,200 percent the usage](#) of the pre-COVID days. Comcast says [uploads have increased by 33 percent](#) while downloads have only increased by 13 percent compared to a March 1 baseline.

Uploads have been rising faster than downloads. (Source: Comcast)

"We look at the ratio between downlink and uplink and maximize that for the usage being done," said Heidi Hemmer, Verizon's VP of technology. "Yes, we have seen more use of uplink [since COVID-19.]"

Verizon says 5G uploads should only be 30 percent faster than before, but that may be expectation management. When we first tested 5G uplink in Providence, Rhode Island, last year, we found that it increased average uplink speeds from

37Mbps to 93Mbps. Ookla Speedtest later [looked at crowdsourced results](#) and saw an average of 50.55Mbps up, still a 78 percent lift from 4G.

The company will use 100MHz of millimeter-wave 5G spectrum for uploads, Hemmer confirmed. Currently, the company generally uses no more than 20MHz of LTE for uploads.

[Some T-Mobile 5G devices](#) use a combination of 4G and 5G for uploads, but as T-Mobile is using relatively narrow channels in its long-range low-band 5G network, they have seen speeds [more like 33Mbps up](#) in tests with the OnePlus 8 Pro.

T-Mobile's 5G uploads are less of an improvement over 4G uploads. You Need This for Zoom Life.

We don't talk enough about uplink. On 4G networks, upload speeds are at most a third of download speeds, as shown in testing.

Landline systems are often even more mismatched. Cable providers make it very difficult to see what uplink speeds are on their sales websites. In New York, cable company Spectrum doesn't show its upload speeds on its sales site, and buries them in a government-mandated disclosure PDF. There, you discover that 200Mbps download plans have only 10Mbps up; 400Mbps plans have only 20Mbps up; and 940Mbps plans have 35Mbps up.

Fiber internet plans more often tend to be symmetrical, with upload speeds that match their download speeds.

There's a historic reason for the mismatch, of course. We typically download a lot more than we upload, and that amount is most lopsided at home. The vast majority of home internet use right now is video streaming from providers like Netflix, Hulu, and Amazon Prime. That's all download. Even the most intense TikTokers consume a lot more content than they produce.

[Zoom](#) recommends, ideally, [3Mbps up/down](#) per high-quality group call. That underestimates what you really need. If we keep having multiple people in each household trying to work or go to school virtually, a good uplink connection is going to become more important. And while you're probably not taking too many Zoom calls out on the street where Verizon 5G works well, this positions Verizon's 5G service for the wider [home internet launch](#) it still plans to do by the end of the year.

In getting 5G Indoors Verizon's move only helps people who can get that sweet, sweet millimeter-wave 5G, though. And for now, that's very few people. Even in downtown areas of cities Verizon claims to cover, OpenSignal [only got Verizon 5G 6 percent of the time](#) in December/January walk tests. In other tests, we've found that Verizon's mmWave 5G still works primarily outdoors, with poor penetration inside buildings and only about an 800-foot radius off each cell site. This correlates to the point that a 5G antenna will have to be located on every other house on a residential street.

Pivotal's Echo 5G helps millimeter-wave get indoors. (Source: Pivotal Commware)

T-Mobile's slower, low-band 5G has much broader coverage. Verizon's mmWave needs more coverage. (Source: OpenSignal)

Verizon said it is partnering with Movandi, Pivotal Commware, and Wistron to provide mmWave extenders that can improve signal strength and range.

[Pivotal's Echo 5G repeater](#), about the size of a small dinner plate, attaches to a window and "acts as a portal between indoor and outdoor worlds," according to the company.

Pivotal also says its technology can reduce the number of 5G panels a carrier needs to place on the streets of in each neighborhood, instead putting repeaters on utility poles and on the windows of individual subscribers. According to the company, a carrier could replace 28 base stations with seven base stations and 390 small repeaters. This could help 5G deployment troubles because Verizon would have fewer debates with towns about putting up larger base stations, while its subscribers would probably be willing to use repeaters to get in-home service.

According to an article from Fierce Wireless, [Movandi's BeamXR technology](#) helps millimeter-wave signals penetrate Low-E glass, a form of energy-saving glass that's common in commercial buildings and right now presents a major barrier to indoor mmWave coverage.

Movandi has also been tapped by Verizon, along with the more usual suspects—NXP and Qualcomm—to provide chipsets for in-home 5G devices. Movandi's technology will probably be used to help get clearer connections through windows to home 5G receivers. There's no date on when the Pivotal and Movandi solutions will be available.

Finally, Verizon's adding another 5G city, San Diego, to its list on May 28, the company said in a press release. Hemmer said a few weeks ago that Verizon is on track to have [60 5G cities](#) by the end of the year.

The company says that 5G in San Diego will appear in parts of Mission Valley, Linda Vista, Kensington, and Banker's Hill.

US 5G Cities for Verizon, AT&T, T-Mobile, and Sprint (Updated)

The list of US cities with 5G continues to grow with carriers like Verizon, AT&T, T-Mobile, and Sprint all rolling out 5G mmW and sub-6 5G throughout the next couple of years. 5G is on the rise in the US, so just like with the 4G LTE rollout of years past, we are seeing a similar trickle out of 5G cities from US carriers. Whether they feature 5G mmW or sub-6 5G tech, there is a good chance 5G is close to your neck of the woods.

Since carriers like Verizon, AT&T, T-Mobile, and Sprint only ever announce a couple of 5G areas at a time, you might want a giant list of 5G cities for each, all in one place, that is (hopefully) updated regularly.

Verizon 5G Cities

Atlanta, GA	Indianapolis, IN
Boise, ID	Los Angeles, CA
Boston, MA	Memphis, TN
Charlotte, NC	Miami, FL
Chicago, IL	Minneapolis, MN
Cleveland, OH	New York, NY
Columbus, OH	Omaha, NE
Dallas, TX	Panama City, FL
Denver, CO	Phoenix, AZ
Des Moines, IA	Providence, RI
Detroit, MI	Salt Lake City, UT
Grand Rapids, MI	Sioux Falls, SD
Greensboro, NC	Spokane, WA
Hampton Roads, VA	St. Paul, MN
Hoboken, NJ	Washington, DC
Houston, TX	

AT&T 5G+ Cities

Atlanta, GA	New Orleans, LA
Austin, TX	New York City, NY
Baltimore, MD	Oakland, CA
Charlotte, NC	Ocean City, MD
Cleveland, OH	Oklahoma City, OK
Dallas, TX	Orlando, FL
Detroit, MI	Phoenix, AZ
Houston, TX	Philadelphia, PA
Indianapolis, IN	Raleigh, NC
Jacksonville, FL	Redwood City, CA
King of Prussia, PA	San Antonio, TX
Las Vegas, NV	San Bruno, CA
Los Angeles, CA	San Diego, CA
Louisville, KY	San Francisco, CA

Menlo Park, CA San Jose, CA
Miami, FL Waco, TX
Miami Gardens, FL West Hollywood, CA
Nashville, TN

AT&T 5G Cities

Baltimore, MD Milwaukee, WI
Birmingham, AL New York, NY

Dallas, TX New York, NY

Sprint 5G Cities

Atlanta, GA Los Angeles, CA
Chicago, IL New York, NY
Dallas-Fort Worth, TX Phoenix, AZ
Houston, TX Washington DC
Kansas City, MO/KS

As noted, each of the telecoms is operating different levels of 4G and 5G. Let no one kid you that 4G is less harmful than 5G. Those operating 5G do so for different reasons, but mostly for financial reasons. This is somewhat confusing and so I will not go into the factors each company considers, and not all are completely honest with their employees and shareholders.

All wireless is harmful, some more so than others. As the public begins to see the effects of 5G it will become less appealing, there is on the drawing table, even faster 6G. The telecoms have told their shareholders that the

wireless market potential is in the \$6-trillion dollar range. The chart on the next page goes so far as to break this down into percentages and billions of dollar markets. The return on investment of \$59-billion dollars would be enough reason for the industry to do everything in its power to run over the opposition efforts. They have the FCC in their deep pockets.

I wrote an article on **“5G on Steroids”** which seeks to use the electrical power lines to bring 5G technology to the residential public. An experiment underway in Georgia is exploring this avenue of delivering wireless communications and reducing the number of small and large cell tower antennas that 5G technology requires.

Value attributable to 5G by industry (\$bn and % of total)

SOURCE: OMDIA

THE EVIDENCE MOUNTS

by Arthur Firstenberg

THE WORLD, accustomed to blaming every illness on a bacterium or virus, has been ignoring the enemy that we have invited in and mistaken for a friend. The evidence is mounting, not only that it is futile to try to hide from a microscopic gene sequence that has already flooded the earth, over which we have no control, but that the illnesses that are being blamed on that virus, and which rightly terrify us, are in part caused by an enemy that we ourselves have created, and that we have refused to recognize as the mortal threat that it is. It is not a coincidence that Wuhan, China turned on its first 5G communication network just two weeks before the first known person became ill there with a disease that has since shut down the world. It is not a coincidence that the Diamond Princess cruise ship set sail with 5G satellite communication antennas on board, immediately before the same disease sickened hundreds of its passengers. It is not a coincidence that Germany, this spring, brought 4G-LTE technology for the first time to areas near its borders immediately before small birds began dying in large numbers in precisely those areas.

Viruses are constituent elements of life on Earth. Microwave radiation is foreign and lethal to life on Earth. It is time that humanity recognizes these facts.

SOCIAL DISTANCING FOR BIRDS?

“A previously unidentified disease is currently threatening blue tits, great tits and other small songbirds across Germany,” [reported](#) the German conservation organization NABU. The first cases were reported on March 11, 2020, and by April 21 the number of reported sick and dead birds [was around 26,000](#). Although this disease is being blamed on a bacterium, its resemblance to COVID-19 cannot be avoided. The birds are being described as “apathetic birds with breathing problems.” They cannot eat, appear to be “unquenchably thirsty,” and then die. Extreme thirst is a widely-reported effect of microwave radiation. It is also commonly reported in cases of COVID-19.

Absurdly, [NABU is telling people](#) to stop providing feeding stations and water sources in order to enforce “social distancing” for birds. NABU [has published a map](#) of German regions showing the number of reported tit deaths per 100,000 inhabitants:

The highest number of bird deaths is occurring along the Mosel River and in the region around Oldenburg in Lower Saxony. These are areas where Vodafone announced in a press release on April 10, 2020 that it had just expanded its 4G-LTE cell tower network. Vodafone said it had closed “one of the nastiest radio holes” in Lower Saxony, and there had previously [only been 2G service along the Mosel River](#). “The company has implemented more than 1,000 LTE projects in the past few months,” [said Vodafone](#), and [is increasing the power](#) of 500 existing LTE

stations and upgrading 260 more stations to 4G-LTE.

MYSTERY DISEASE IN YOUNG CHILDREN

We have been told that COVID-19 is a serious disease mainly in the elderly, and that it does not affect young children. Now, however, an unknown disease is being described in children in the United Kingdom, Spain, Italy and the United States and since many of them are testing positive for COVID-19, it is being blamed on that virus — despite the fact that other children with the new disease have tested *negative* for the virus. Children are appearing with “[multi-system inflammation with flu-like symptoms](#),” and “[with blood parameters consistent with severe COVID-19](#).” The children may be agitated, confused, have severe difficulty breathing, have seizures, low blood pressure, inflammation of the heart, abdominal pain, skin rash and, especially in teenage boys, testicular pain. The disease is being called a variant of either toxic shock syndrome or Kawasaki disease. But the symptoms are all classic effects of [radio wave sickness](#).

AN OCEAN OF VIRUSES

The idea that we can keep from sharing viruses by wearing masks and staying a few feet away from each other is about as realistic as putting a mask on a fish and pretending it is going to protect it from getting wet. Viruses are nothing but pieces of genetic material that constitute the basis of life itself. It is coming to be understood that there is an ocean of bacteria and viruses that circulate in the atmosphere and travel on high-altitude winds around the world and between continents. And that the viruses far outnumber the bacteria. It has long been a mystery how, from one season to the next, an old strain of the influenza virus can be replaced by a new strain, at the same time all over the world. This is now being explained. A team of Canadian scientists, in a [paper about influenza](#), observed that viral particles may be transported hundreds or thousands of kilometers before returning to the ground and that “the Far East may be a source of wintertime influenza viral aerosols that reach North America a week or two after they are emitted into the atmosphere... Thus, the entire population of the world may become exposed to airborne influenza virus. This may help to explain the ubiquity and persistence of this disease.”

This could also explain how sailors on the Navy ship, USS Kidd, could have contracted the coronavirus after [more than a month at sea](#) without any contact with land. The ship left Pearl Harbor on March 20, 2020, and the first sailor started showing symptoms of the disease on April 22. Subsequently the ship was quarantined in San Diego, where 64 sailors tested positive for COVID-19. But viruses are much more than vectors of disease.

Viruses, wrote an international team of scientists in a [paper published in 2018](#), “encompass much of the biological diversity on the planet.” There are an estimated 1,000,000,000,000,000,000,000,000 virus particles in the oceans

alone. To determine the number of viruses circulating high in the atmosphere, these authors established two collection stations in the Sierra Nevada Mountains of Spain, and counted viruses. They found, at those locations, that between 0.3 billion and 7 billion virus particles per day were falling out of the air onto every square meter of land, originating from both land and ocean sources far away.

“The daily deposition rates of viruses associated with aerosols <0.7 μm in size explains observations that identical viral sequences occur at geographically distant locations and in very different environments,” wrote these authors. They also found evidence that “bacteria and viruses can remain viable after atmospheric transport... Rather than being a negative consequence, this deposition provides a seed bank that should allow ecosystems to rapidly adapt to environmental changes.”

“Viruses,” wrote a pair of scientists from San Diego State University (“[Here a virus, there a virus, everywhere the same virus?](#)”), “are ubiquitous, abundant and ecologically important in the environment.”

Those who are telling us to stay home, wear masks and practice social distancing have a myopic, extremely limited, and wrong understanding of viruses, their function in the world, and how they circulate. The COVID-19 virus is already circulating on the wind, everywhere in the world. Masks, disinfectants, social distancing, and staying home accomplish nothing. As [more than one doctor has observed](#), it is rational to quarantine the sick, but irrational to quarantine the healthy.

Are you experiencing **SYMPTOMS** of **EXPOSURE** to radiation?

Brain

- Headaches
- Dizziness
- Nausea
- Difficulty concentrating
- Depression
- Anxiety
- Memory loss
- Insomnia
- Fatigue
- Tremors
- Muscle spasms
- Tingling
- Altered reflexes
- Muscle & joint pain
- Leg/foot pain

Others

- Digestive problems
- Abdominal pain
- Enlarged thyroid
- Dehydration
- Immune abnormalities
- Altered sugar metabolisms
- Redistribution of mentals within the body
- Hair loss

Eyes

- Pressure in/behind the eyes
- Deteriorating visions
- Cataracts

Heart

- Palpitations
- Arrhythmia
- Chest pain or pressure
- Low/high blood pressure

Respiratory

- Sinusitis
- Bronchitis
- Asthma
- Pneumonia

Skin

- Skin rash
- Itching
- Burning
- Facial flushing

US Naval Medical Research
Institute (1972 Declassified)

Note the date to the above right of the U.S. Navy page for symptoms of EMF non-ionizing radiation sickness. The original documents that were originally classified Top Secret was dated in the mid-1950.

Symptoms of Microwave Illness

<https://www.microwavedvets.com>

Headaches	Difficulty Concentrating	Tinnitus
Dizziness	Memory Loss	Hearing Loss
Nausea	Brain Damage	Irregular Sleep Pattern
Skin Rash	Mood Disorder	Insomnia
Itchy Skin	Personality Disorder	Chronic Fatigue
Burning Skin Sensation	Increased Irritability	Deteriorating Vision
Tingling Sensation	Decreasing Trust in People	Pressure in/behind eyes
Tremors	Depression	Eye Damage
Muscle Spasms	Anxiety	Cataracts
Muscle and Joint Pain	ADHD/ADD	Immune Abnormalities
Restless Leg Syndrome	Digestive Issues	Altered Sugar Metabolism
Foot Issues	Abdominal Pain	Asthma Attacks
Low/High Pressure	Enlarged Thyroid	Bronchitis
Facial Flushing	Hair Loss	Pneumonia
Dehydration	Testicular/Ovarian Pain Low	Inflamed Sinuses
Body Metals Redistribution	Sperm Motility	Chest Pain/Pressure
Leukemia	Miscarriage	Heart Arrhythmia
Lymphoma	Electromagnetic Sensitivity	Heart Palpitations

I know this article has been long but before I close it out, I must share what has become a personal issue with me. Shortly after I had finished reading Dr. Arthur Firstenberg's book, *'The Invisible Rainbow'*, what I believed were non-related issues, suddenly took on a new understanding.

I have been the victim of Cellular radiation poisoning. We rent the Methodist parsonage that we lived in as the pastor and family from 1993-1996. We moved here in the fall of 2014, and shortly after which I began to experience leg issues. I developed neuropathy, and I developed an open wound almost 5-inches in diameter on the inside of my right leg that failed to heal for thirteen months. I discovered the natural healing powers of Manuka honey from New Zealand. In five months the wound healed completely. My wife applied this Manuka honey known for its medicinal healing properties to a 6x6 surgical gauze pad. She was a skeptic at first until the end of the first week. The opening had begun to diminish in size; we would measure it every week. All we did was spray the wound with hydrogen-peroxide just before showering, and then applied the Manuka honey with surgical pads before retiring to bed at night.

The pain was excruciating and many nights I would wake from sleep with my right leg vibrating and jerking such that I had to hold it down with both hands. I would take a Manitoba Hemp gel-cap to take the edge off the pain. Some nights I would take two of the Hemp gel-caps. Once the open wound had healed, I thought I was

on my way back in recovery. I have been home-bound for six years. I then began to leak a milky-white fluid from blisters that broke out on both my lower legs. Not a day went by that I was not on the internet researching. My daughter-in-law is a nurse and she had my wife wrap my legs and feet from the knees down with Ace bandages, supposedly to keep pressure on leg circulation. Many a night the Ace's would be soaked in this fluid. I have not worn shoes and socks throughout this period. I wear Crocs since they do not absorb the leaking fluids and can be drained into a plastic cup for disposal.

Shortly after beginning to read Dr. Firstenberg's book, I began to analyze and trouble-shoot my leg issues. Doctors could not offer me any solution other than to lay down a couple times a day and keep my legs elevated, which I did but to no affect. As one not to waste time, I would read twenty pages a morning before my wife got up and moving about. I'm an early riser and she is the opposite. So I began to use this idle time by reading lying on my back with the assistance of a LED reading light that I put around my neck. I tried everything and suggestion people would offer, none of which worked.

My study is 10'x10' and faces an AT&T cell tower, which is exactly 2,500-feet from my residence. It was erected sometime after we had moved back to Pittsburgh in 1996. I have experienced a dozen of the symptoms on page 49 above. What struck me as strange was the fact that on nice sunny clear days my hands, arms, and back would itch like crazy. Yet on days when it rained, or on snowy days, the itching disappeared. I was looking for a pattern and after nearly a year, the pattern was pretty obvious. Eight months ago I bought some Shungite pyramid stones and placed them in areas where my Wi-Fi router signal would be helpful. My wife also experienced different symptoms on the list above, but not the same as mine.

Six weeks ago, I purchased a solid copper bracelet, something that people with arthritis wear, and in 4 days I began to notice a drop off of the milky-white fluid. The Ace bandages were not as wet, and the process continues to be working. Last week my wife bought me an EMF anti-radiation hoodie that I saw on Amazon. I have what is known as Lymphedema and the leakage is called Lymphorrhea. All the medical and health sites say there is no known cause and no cure for it.

My hoodie arrived on Saturday of the Memorial Day weekend. Shortly after turning on my computer, I waited to see if the itching returns, and within about 5-10 minutes, the itching was back. It has been a week and when I wear the hoodie, which slips down over my head and covers the area where my lymph glands are in the neck. Once putting the hoodie over my head, the itching stops completely, at least until I remove the hoodie. It has an Anti-EMF Radiation shielding fabric which is a composite of silver, cotton, and rayon. It is rated to (45dB at 1 GHz). I have just taken it off as it has started to rain outside and I am about to close this off before going to bed. My Aces are almost dry with slight dampness.

Amazon also offers an Earth Grounding Faraday RFID Shielding Fabric-Block Wi-Fi/RF-Anti-Radiation Conductive Magnetic Copper/Nickel EMF Protection Fabric which is rated to Attenuation of 75dB-95dB from 10Mhz-18Ghz.

I have written to Dr. Firstenberg a few days ago and shared my story with him for his thoughts and comments. Keep in mind, none of the medical and health sites say there is a known cause for this and there is no cure as well. Dr. Firstenberg's book is a compendium of what came with the discovery of electricity in the 18th century.

And yet....

[FCC Commissioner Calls 5G Opponents “Tin Foil Hat People” — Opponents Include U.S. Navy, NASA, NOAA, DoD, and More](#)

The Federal Communications Commission (FCC) is supposed to protect Americans by regulating the telecom industry. Unfortunately, they have a long history as an embarrassingly corrupt agency. With the telecom industry's investment of \$59-billion dollars, who can rule out bribes, kickbacks, and payoffs

to those in the FCC? Four commissioners are making decisions that have the potential of doing great harm to life. Whether it is the bees, or our children and grandchildren, we must remain vigilant. Bear in mind that it was Supreme Court Justice John Roberts who initially ruled against President Obama's grand Health Reform Act only at the end to rule that the government could force you to buy the Obama Health Care Bill. I believe it was two days after making that ruling in which the Supreme Court said the bill was constitutional, he was photographed entering the Knights of Malta office in Malta, likely to receive his payoff, note the Knights of Malta sign on their headquarters in Malta.

Figure 1: Meghan Keneally. (July 3, 2012). After joking about heading to Malta to escape criticism....Chief Justice Roberts heads to Malta as it emerges that he may have written for AND against opinions on Obamacare. The Daily Mail. <https://www.dailymail.co.uk/news/article-2168451/Chief-Justice-Roberts-heads-Malta-emerges-written-AND-opinions-Obamacare.html>

Activist Post reported yesterday about their June 9 agenda to speed up 5G deployment despite increasing opposition from citizens, doctors, elected officials, environmentalists, as well as highly respected organizations and

government agencies. **Regardless, one commissioner is dismissing this as “conspiracy theory” nonsense.** This is the common reply we get from the government, as noted by the meme on page 4 and 5 above. The CIA created it as a retort to Truth Seekers! They have used this all too long to dissuade or to shame the public!

“The bottom line is there’s nothing new here,” Brendan Carr said. Conspiracy theories about the safety of RF go back to 3G and 4G and can even be traced to the days when AM and FM radio signals were being introduced. The problem is, they spread faster nowadays with social media.

Some try to argue that 5G is different because it operates on higher frequency bands for which there are no federal RF limits, but that’s not true. The FCC’s limits go up to 100 GHz, which is higher than the spectrum 5G operates on, Carr said via Twitter.

Cities AND countries have already taken action to ban, delay, and stop 5G deployment (see [1](#), [2](#), [3](#), [4](#), [5](#), [6](#), [7](#), [8](#), [9](#)).

There is research that has determined exposure to 5G (see [1](#), [2](#)) and other sources of wireless radiation (see [1](#), [2](#)) can [reduce immunity](#) and cause other health issues including [increased cancer risk](#). ALSO since 2018, there have been reports of people and animals becoming sick after it was turned on (see [1](#), [2](#), [3](#), [4](#)).

Regardless, the FCC wants to speed up deployment during the pandemic (see [1](#), [2](#), [3](#), [4](#), [5](#)). This includes tens of thousands of satellites being launched to blast [5G and Wi-Fi 33](#) at us from space (see [1](#), [2](#), [3](#)). Lawsuits have also been filed against the agency for NOT protecting the public from unsafe levels of radiation (see [1](#), [2](#)) as well as [5G](#).

But Brendan says there’s nothing to worry about...

Experts from a multi-discipline field of science and medicine, thousands of papers and studies have proven the likes of Brendan Carr to be poor judges of the evidence. Where have I heard that before, oh, in Hosea 4:6,

“My people are destroyed for lack of knowledge: because thou hast rejected knowledge, I will also reject thee, that thou shalt be no priest to me: seeing thou hast forgotten the law of thy God, I will also forget thy children.”

Hosea’s words are just as applicable today, and after looking into the background of FCC Commissioner Brendan Carr, I can say with some degree of confidence, that we need not hold any hope out for what the future holds from this Georgetown University Jesuit Roman Catholic lawyer! His loyalty is to the Jesuit

Superior General and not the United States of America. The old adage, “*All Roads Lead to Rome*” keeps popping up everywhere in society!

Before anyone wants to attack my views of the Jesuits and the Jesuit-controlled Vatican, you need to read the Jesuit oath taken by a Jesuit-educated Catholic. A Jesuit, lay or clergy, take the same oath in their loyalty to the Pope.

I will cut this off here and do a Part 2 on this matter.

Blessings,
