

Coronavirus: Proof 5G Exposure Causes Oxygen Deprivation

Part 1

5G Network and Corona Virus

Is **5G** to partially blame for coronavirus deaths? Can **5G** cause the blood that's circulating in your body to be unable to carry oxygen?

What's especially horrifying about the critical care of coronavirus patients is that they aren't suffering from "*viral pneumonia*," but rather from an inability to absorb or carry oxygen in the blood. This has been confirmed by NYC ICU emergency physician Cameron Kyle-Sidell, who has released several videos detailing how coronavirus is not a kind of viral pneumonia. "*We're treating the wrong disease*," he says.

And the ventilators are damaging the lungs of patients. He explains: COVID-19 lung disease, as far as I can see, is not a pneumonia and should not be treated as one. Rather, it appears as if some kind of viral-induced disease most resembling high altitude sickness. Is it as if tens of thousands of my fellow New Yorkers are on a plane at 30,000 feet at the cabin pressure is slowly being let out. These patients are slowly being starved of oxygen.

What this emergency room physician makes clear is that coronavirus patients are dying from oxygen deprivation, not a classic scenario of viral pneumonia. The patients' lungs work fine, in other words, and the ventilators are actually damaging their lungs by forcing excessive pressure into them.

How does blood transport oxygen in the first place? How, exactly, can all these patients be starved of oxygen when their lungs are technically working just fine? To understand

one possible answer, you have to first understand how the blood carries oxygen. Its way more fascinating than you might have supposed.

When functioning normally, 1 molecule of hemoglobin binds with 4 molecules of oxygen, using iron (Fe²⁺), forming oxyhemoglobin. But this binding is only achieved because of something called “partial pressure” which means the concentration of oxygen in the lung tissues is higher than the concentration of oxygen on the hemoglobin molecule (roughly stated, this is simplified somewhat), so the oxygen “leaps” to the hemoglobin in order to equalize the partial pressures across the chasm.

<https://www.naturalnews.com/images/Hemoglobin-1-1.jpg> Image source: QSstudy.com
But **5G** radiation alters the porosity of cell membranes, allowing some molecules or ionic elements to move more easily across those members, displacing other molecules (or soluble gasses such as carbon dioxide) that might normally make that leap. For example, it is well documented that **5G** radiation causes “Voltage Gated Ion Channels” (VGIC), specifically with calcium ions (VGCC), causing cellular toxicity due to too much calcium entering the cell walls and poisoning the cells.

The research on this was published in Environmental Research — <https://www.sciencedirect.com/science/article/pii/S0013935118300355#t0015>— and reveals that **5G** exposure not only alters cell permeability (porosity), but also releases peroxinitrites in the body. These are inflammation-producing molecules that ravage other healthy molecules circulating in the blood.

A thorough review of the available published science on wireless (Wi-Fi) and electromagnetic frequency (EMF) exposure has identified at least seven different ways that Wi-Fi and EMF microwave pollution actively harms the human body. Published in the journal Environmental Research, the peer-reviewed paper explains that exposure to Wi-Fi signals, which are everywhere these days, can lead to: oxidative stress, sperm and testicular damage, neuropsychiatric effects including EEG (electroencephalogram) changes, apoptosis (programmed cell death), cellular DNA damage, endocrine changes, and calcium overload.

Note that coronavirus patients are already being observed with neuropsychiatric effects, testicular damage and oxidative stress, three of the symptoms of **5G** exposure.

This simple chart below points out the similarities between **5G** exposure and coronavirus symptoms:

Mass insanity due to psychiatric effects of cellular poisoning we also know that **5G** radiation and its effects on the cells of the body can lead to symptoms of insanity, hallucinations and even powerful personality changes. **5G** radiation causes “neuropsychiatric” effects through a mechanism described as ion potentiation poisoning of brain cells, according to research published in Environmental Research.

SYMPTOMS OF 5G EXPOSURE VS. CORONAVIRUS INFECTIONS

SYMPTOM	5G	CORONAVIRUS
Sperm / Testicular Damage	✓	✓
Neuropsychiatric Damage	✓	✓
Cellular DNA Damage	✓	✓
Apoptosis (Cell Death)	✓	✓
Cardiac / Blood Pressure Disruptions	✓	✓

Defending Health, Life and Liberty

This results in behavioral changes and even personality changes among those who are routinely exposed, researchers found. In other words, **5G** is a weapon system that doubles as a telecommunications infrastructure, but the real impact is to damage human brain function and destroy rationality, reason and civility, especially among those who live in high population cities where **5G** towers are becoming ubiquitous. That's why you may have noticed increased insanity and widespread mental derangement in those areas.

5G causes mass mental illness and even personality changes:

Part of this effect may also be due to the production of peroxynitrites, which are generated in the body's cells upon exposure to the voltage emitted by **5G** radiation, which is beamed at your body in a narrow cone of high-intensity energy. (**5G** antennae focus energy in a tight beam that follows you around.) We are already observing the

coronavirus causing psychiatric effects, including zombie-like violent, aggressive behavior.

How **5G** radiation exposure alters the ability of red blood cells to carry oxygen Getting back to the oxygen question, the answer to why **5G** radiation exposure may alter the function of hemoglobin is found in understanding the protein structure of hemoglobin itself. Hemoglobin relies on something called the “heme group” which is a complex molecule with iron (FE 2+) in its center. This is surrounded by something called a “porphyrin ring” which is a cluster of unique structures (made of oxygen, carbon and hydrogen) that has a special affinity for other oxygen atoms. The ability for oxygen to “leap” onto this molecule in the lungs depends entirely on the structure (which also implies the ionic charges) of these complex molecules.

One thing to note in all this is that without the presence of histidine, a special protein, this heme group would have higher affinity toward carbon monoxide than oxygen, meaning the entire heme group would be occupied by carbon monoxide, blocking the absorption of oxygen. Thus, the histidine presence is critical for allowing the heme group to bind with oxygen. If you mess with histidine, you end up forcing hemoglobin to carry CO instead of O₂, effectively creating oxygen deprivation in the blood. This heme group, by the way, has special affinity for carbon dioxide, which allows the same molecule to carry CO₂ out of the body’s cells and transport CO₂ back to the lungs. Remember: The same hemoglobin molecule must carry both CO₂ and O₂ but at different times, and it must attract and then release those molecules at opposite times in order to rid the body of CO₂ and nourish the body with O₂. This is all accomplished with a delicate balance of proteins and protein folding.

The hemoglobin molecule itself is a miracle of nanotechnology. It transmorphs into two different structural states based on whether it’s carrying oxygen or not. In what’s called the “R-state,” this molecule is like a magnet for oxygen. When four oxygen atoms are bound, it becomes a highly stable structure (and appears red). Technically, the binding of a single molecule of oxygen (O₂) increases the affinity toward oxygen on the three other oxygen sites, making the hemoglobin “mop up” four oxygen molecules very quickly. When it lacks oxygen, it changes to a “T-state” and appears blue, which is why low-oxygen blood has a blue color.

The important thing to understand in all this is that any alteration of the delicate structure of hemoglobin will impair its ability to bind with oxygen.

The polypeptide chains in the hemoglobin molecule are part of the transmorphing structure of the molecule that allows it to carry and release both CO₂ and O₂, depending on the partial pressures of the gasses at different locations in the body (lungs vs. other cells). Note carefully that any change in the structure of hemoglobin will cause it to stop functioning: Increasing the permeability of the hemoglobin molecule — i.e. its affinity toward other soluble gasses such as carbon dioxide — will “occupy” the hemoglobin molecule with the wrong substances, making it unable to absorb oxygen

because it is not presenting in its “R-state” by the time the heart pumps the blood back to the lungs.

Stated another way, anything that significantly alters the affinity of hemoglobin toward other soluble gasses (carbon dioxide, carbon monoxide, or even ionic minerals in the blood) could “shut off” the ability of blood to carry oxygen by altering its atomic structure. If you change the structure of the heme group, it no longer functions to transport oxygen. Because in the case of the heme group, the structure is the function. Perhaps this can only be appreciated by organic chemists, but this heme group is truly a miracle of nanotechnology.

As the energy level is increased in the **5G** spectrum through its millimeter wave beam, it causes the oxygen molecules to dance and rotate vibrantly in the victim. It is a proven medical fact that laboratory test mice samples collapse and die instantly when 5G hits the 60GHz energy level. This was confirmed by those who died in Wuhan, China. All Chinese citizens were vaccinated in early September, 2019. As to why some died, and others were not affected is of great interest. Chinese secrecy does not help.

The answer may lie in what the mandated vaccine contained of those who died. Rumors to the effect that Chinese dissident citizens had received a vaccine containing an electronic receptor, like the QuantumDot/Hydrogel ID2020 which was activated by

5G. Something that I have not discussed heretofore is that the fatal vaccine may have been laced with Mycoplasma, a pathogen that attacks a person in predisposed genetically weak areas of the human biome. This was the case with 65 million Americans who received the Salk/Sabin polio vaccines in the mid-1950s. The carcinogenic SV40 virus from monkeys was added to the polio vaccine and only became known in the 1980s with huge spikes in cancers. Autopsies confirmed later the presence of SV40. There is a video on the Internet telling of the inserting SV40 in the polio vaccines.

Nagalase is another pathogen that has been found in autopsies of cancer patients in recent years. This suggests at some point in the life of the deceased, they had been deliberately infected with Nagalase, What is strange about Nagalase is that at least 8 holistic doctors were poisoned with Nagalase. Five others soon vanished without a trace, and 28 more naturopaths in 2015 were poisoned at a homeopathic conference in Germany. Just what is going on?

SV40 and Nagalase are prime examples of why no one should get vaccinated. There is no proof that what you are receiving is safe. We know for a fact that military personnel and veterans have been vaccinated before deploying to foreign countries, In January, 1957 I walked the “shot” line before departure to my 3-year assignment to Germany. None of us knew what any of the shots we received were for. There is an even darker story about those who were given the “Spanish Flu” vaccines at Fort Riley, KS before shipping out to Europe in 1917-18. It was called that since it was not discovered until the troops arrived in Spain. Dr. Arthur Firstenberg contends that it was not a virus but a bioelectric reaction to the introduction of electricity. I have read numerous reports and studies conducted that showed the “Spanish Flu” was not a contagion or a virus. Dr. Andrew Kauffman and Dr. Tom Cowan this past year in videos on the Corona have pointed out the history of the “Spanish Flu” as a case of mistaken cause.

In Part 2, I will address a relatively modern-day pathogen known as Mycoplasma. I have been studying the medical literature and studies on this and its implications on how people may be poisoned in conjunction with **5G** and not know it.

Iron, histidine, the heme group and O₂ oxygen molecules interact with hemoglobin, which alters its structure depending on the “oxygenated” vs. “deoxygenated” forms.

Can **5G** exposure alter the structure of hemoglobin by increasing its affinity toward other molecules which are not O₂? The real question in all this is best phrased as I have asked it above. I doubt that we are dealing with a phenomenon where **5G** radiation exposures blocks the ability of hemoglobin to carry oxygen, but rather occupies the hemoglobin molecule with other elements that alter its structure and therefore its function, inhibiting its ability to bind with oxygen. This is very likely happening all across the world wherever **5G** is currently functioning, it's just that the coronavirus is now exacerbating the symptoms and conditions to the point where mass death is occurring.

In other words, the coronavirus pandemic would likely not be nearly as bad if **5G** exposure / radiation pollution wasn't already compromising the structure and function of hemoglobin cells in the bodies of people who live in **5G** cities.

This doesn't mean the coronavirus isn't real, of course; just that these two attacks on the human body have a synergistic effect of toxicity and mortality. I need to note that the so-called coronavirus has not been proved to even exist. The CDC admits they do not have cultured samples; none exist according to their admission.

Conclusion: Humanity is committing suicide with **5G**. While I strongly disagree with those who are claiming there's no such thing as a virus or that the coronavirus is a hoax, it is misrepresented since the public health agencies have yet to prove it even exists at all. You can't call something a virus without first capturing samples, cultivating it in a lap petri dish, and then introduce it into a test animal to see if contagion exists. The CDC and the WHO have not done that, even admitting the absence of all of what I just stated. I do agree that the widespread deployment of **5G** antennas is a kind of suicide pact for the world. Just as the Romans built their aqueducts out of lead linings and thereby poisoned their own citizens, driving them insane with lead poisoning, the modern world of Big Tech and telecommunications is mass poisoning humanity with electropollution.

Dr. Arthur Firstenberg's 2017 book, *'The Invisible Rainbow: The History of Electricity and Life'*. People are talking about the book, *'The Invisible Rainbow'* by John Kaminski, who believes coronavirus is an "electrical disease" and that **5G** alone is causing all the mass deaths, not the virus. He writes things like, *"The flu is not contagious"* and *"the quarantine is all a terrible hoax."* They are not wrong at all about the toxicity of electropollution and how **5G** is actually a kind of "suicide system" that's destroying humanity. The problem lies in that truth is first refuted until the evidence is so substantial it becomes evident to be fact!

This all deserves a tremendous amount of additional study, but because we live in a world where Big Tech controls all the narratives and censors all those who question the safety of **5G**, it now seems impossible for humanity to extricate itself from this mass suicide mission that has already been unleashed.

Blessings,
