

Depopulation

#1 Global Issue Since 1968

Part 12

We are in a war and most of you unaware of what it is all about. I recently saw comments regarding the fact that 50-60% will refuse the new vaccines for to so-called alleged Covid-19 virus. I use the “so-called” term since there is no Covid-19 virus, and there are somewhere between 30 and 40 pathogens in the SARS-covid family, and most are nothing more than a simple cold, and at worst a flu pathogen that unlucky people catch.

In three different reports on different sites, it has been suggested that we might see an outbreak of Ebola around the world. That word raises eyebrows and people have heard that the mortality in Africa villages has been upwards of 90%. In my suspicion, it might not be an accident that this has been put out there to raise interest because of what people have been told in recent years. I recall in 2014 doing an extrapolation of this so-called virus called Ebola. Using the World Health Organization (WHO) data and the mortality level, it was easy to calculate how long it would take to infect the entire world. As I recall, it was less than a month to infect the entire world. At the time I ran a number of mathematical programs on this and was concerned myself. Some of the reports I have accessed and read suggests that perhaps the vaccine fanatics will resort to using the “E”-word to heighten the fear-factor with a story to the effect that an Ebola outbreak will break out at unsuspected locations outside of Africa. Hold that in your memory bank.

For more than twenty-five years Chemtrail spraying has been an ongoing event, largely without the public awareness that should have demanded the stopping of this poisoning the skies and terra forma Earth. If you search any sight on the Chemtrail issue that notes the ingredients of this soup mix, nearly all will include the bacteria known as “Mycoplasma”. In providing the reader some background and understanding I am sharing an article written four year ago.

VRM: Mycoplasma - Rogue Pathogen in Vaccines **26th April 2016 - By Joel Lord**

In this age of Medical tyranny, systemic, blatant disregard for nature’s laws has purposefully turned the human body into a battlefield, opening the floodgates to outside forces, enabling novel microorganisms to flourish, thereby unleashing a new breed of toxic agents into the environment.

Natural immunity is threatened more today than ever before in history. The signature of any modern disease, disorder or syndrome impacting human health, is determined by

the extent of its virulence and survivability. Mycoplasma fits this criteria definition, having permanently altered the course of evolution; ultimately the future of the entire human race.

“A 2009 study indicated that half of all lab scientists fail to check for the presence of Mycoplasma in their cell cultures, which is problematic, as this contamination can disrupt patterns of human gene expression.” –(SGS Life Sciences)

As a recognized vaccine researcher I have trained my journalistic eye to examine any crucial science-based evidence pertaining to vaccine injury, impacting our community, particularly in terms of the compromised health of babies & young children.

– a rigorous approach, deconstructing and cross-referencing every component involved in the vaccine manufacturing process; including a case-by-case analysis of mitigating co-factors affiliated with vaccine trauma, hastened or triggered by the shot (pre-existing medical conditions, compromised immunity from birth, exposure to environmental toxins).

To understand exactly what we are dealing with, it is necessary to return to the source of the problem.

To date, I have identified 4 major areas of concern:

1. Faulty methodology –

The whole basis for vaccinations is counter-physiological. The vast majority of infections enter the body through the nasal passages (mucous membrane) & the gastro-intestinal

tract or the gut (gut flora). Accordingly 80% of the body's immune system is situated at these junctures; the natural first line of defense.

Vaccines are injected into deep muscle tissue or subcutaneously, either route which literally bypasses one's natural barriers altogether. Thus the body is left vulnerable to live viruses & heavy metals, increasing, exponentially, the risk of prolonged neurological and neuro-developmental difficulties; which would otherwise be avoided.

"...as large white blood cells rush to attack the foreign particles injected into our bloodstream...surround tiny capillaries where the foreign particles land, clog and collapse the capillaries." –(Dr. Andrew Moulden)

2. Synergistic toxicity –

In practical terms, a synergy factor inevitably occurs when multiple ingredients such as heavy metals, live viruses/or strands of DNA-RNA "*heat treated virus*", antibiotics, formaldehyde, detergent, diploid cells (aborted fetal tissue), phenol dye and other excipient buffers are combined in a vaccine.

For example, Aluminum binds to Thimerosal mercury, forming an amalgam. The addition of Neomycin (antibiotic) will trigger more rapid, profound cell toxicity. resulting in a 75% acceleration in cell deaths occurring in the body.

"...aluminium-containing adjuvants could trigger the cascade of immunological events which are associated with autoimmune conditions including chronic fatigue syndrome and macrophagic myofasciitis." –(Elsevier)

3. Timing –

A newborn lacks sufficient protection to guard against premature damage to the blood-brain barrier. which takes no less than 7 months in utero (latter stages of third trimester) to establish its primary protective shielding, so that vital, unfinished area is still completely raw.

The Myelin Sheath is also significantly under-developed at birth. In fact, a baby undergoes continuous Myelin formation well after birth. Similarly, the Meninges layering is designed to insulate the brain & spinal cord from injury – notwithstanding the accumulative barrage of synergistic toxicity associated with early childhood vaccines.

"For most children the earliest risk of iatrogenic disease (caused by medical treatment) is that from vaccination, unmasking any constitutional weakness, and given at a time of considerable susceptibility to intercurrent infection." –(British Medical Journal)

4. Mutagenic viruses

Our current generation have become unwitting hosts to a form of viral, bacterial & fungal roulette, an ideal breeding ground for the proliferation of lifelong (inter-generational) viral, bacterial & fungal (gut related) infections.

The overwhelming body of scientific evidence points to one critical determining factor in the rise of mutagenic (hybrid or chimeric) viruses & systemic erosion of natural immunity: multi-generational community-wide exposure to the Standard Immunization regime, in particular, those viral vaccines fixed on the schedule which combine live, attenuated viruses.

“It is the nature of living things to change, or mutate, and the organisms used in live, attenuated vaccines are no different. The remote possibility exists that an attenuated microbe in the vaccine could revert to a virulent form and cause disease.” –(US National Institute of Allergy and Infectious Diseases)

However, there is, in fact, a fifth catalyst, aggressively spurring on disease in the human body, a rogue pathogen, which, until now, has consistently slipped under the radar.

Mycoplasma is loosely identified as a form of extracellular and intracellular parasitic bacteria (resembling fried-egg or mulberry shaped colonies). Under scrutiny, the primary evidence suggests otherwise; being structurally smaller than a virus, similarly dependent on the host for survival, comparable to covert bacterium, yet more complex as a pathogen, given its flexible plasma-like surface.

“The name of mycoplasma was chosen because of its mycelated fungi-like structure with a flowering plasma-like structure. Mycoplasma is a kind of bacteria. One of the differences between mycoplasma and the other bacteria is the

absence of cell wall and their flexible membrane in mycoplasma which results in taking different shapes and consequently difficulties in identifying even under a high powered electron microscope.

The small size of mycoplasma (0.15-0.3 μ m) is the main reason for their escape through filtering systems and also their growth in high concentration in mammalian cell cultures without any turbidity or other obvious symptoms.” – (Laleh Nikfarjam, Ph.D. and Parvaneh Farzaneh, Ph.D., ‘Cell Journal’)

“The coccus (spherical shape) is the basic form of all mycoplasmas in culture. The diameter of the smallest coccus capable of reproduction is about 300 nm. In most mycoplasma cultures, elongated or filamentous forms (up to 100 μ m long and about 0.4 μ m thick) also occur.

The filaments tend to produce truly branched mycelioid structures, hence the name mycoplasma (myces, a fungus; plasma, a form). Mycoplasmas reproduce by binary fission, but cytoplasmic division frequently may lag behind genome replication, resulting in formation of multinuclear filaments.” –(Medical Microbiology)

“Bacterium is a complete form of life, fully functional and independent in a suitable environment. They have complete cellular structures...capable of surviving by consuming food around them. They can also die of starvation.

Virus is a basic, complete and independent, form of life, has to have living cells as its home to consume food and multiply. The absence of these hosts, it can remain inactive for years. It is covered by proteins, as compared with plasma membranes in humans, and cell walls in bacteria.

Unlike a bacteria, a virus is only active when replicating within a host cell. Viruses are much smaller than bacteria. Bacterium can divide into two cells, using a process called mitosis. A virus simply cannot do that.”

“Hundreds of mycoplasmas can attach to a single eukaryotic cell, eventually invading the host by fusing with the cell membrane. Upon entry into the cell, mycoplasmas multiply and circumvent defenses to survive, outnumbering host cells by 1000-fold.” –(InvivoGen)

“Mycoplasmas can live intra and extracellular as saprophytes utilizing the fragments from dead or dying cells. Their double layer lipoprotein membrane controls the intracellular flow of nutrients and provides a highly unstable osmolar microbe difficult to isolate and visualize.” –(Harold W. Clark, Ph.D.)

Mycoplasma has been identified as an undermining agent in cases of Autism, Chronic Fatigue Syndrome, Pneumonia , Pulmonary Fibrosis, Aids, Fibromyalgia, Arthritis, Macrophagic Myofasciitis, Epstein-Barr Virus, Bells Palsy, Lyme disease, Creutzfeldt-Jakob disease, Encephalomyelitis, Diabetes Type One, Huntington’s disease, Multiple Sclerosis, Parkinson’s disease, Gulf War Syndrome; including many rarified forms of cancer & lesser known debilitating neuro-degenerative conditions.

Variants of Mycoplasma species possess distinct characteristics of survivability (adaptability), frequently evading detection under the microscope, such as an ability to:

1. proliferate under extreme laboratory conditions, despite ongoing sterilization treatment – which actually increases their resistance to antibiotics.

“Mycoplasmas have been nicknamed the “crabgrass” of cell cultures because their infections are persistent, frequently difficult to detect and diagnose, and difficult to cure. Contamination of cell cultures by mycoplasmas presents serious problems in research laboratories and in biotechnological industries using cell cultures. The origin of contaminating mycoplasmas is in components of the culture medium, particularly serum, or in the flora of the technician’s mouth, spread by droplet infection.” –(Medical Microbiology)

2. target any vulnerabilities present in the body (ranges of compromised immunity), by systematically digesting vital deposits of healthy (high-density lipoprotein type) cholesterol, the vast majority of which is found in the brain and myelin (protective casing around nerve cells).

“It has been estimated that up to 70% of the brain cholesterol is associated with myelin. Because up to half of the white matter may be composed of myelin, it is unsurprising that the brain is the most cholesterol-rich organ in the body. The concentration of cholesterol in the brain, and particularly in myelin, is consistent with an essential function related to its membrane properties.” –(Division of Clinical Chemistry, Huddinge University Hospital, Sweden)

“The vertebrate brain is the most cholesterol-rich organ, containing roughly 25% of the total free cholesterol present in the whole body.”

Sterol is clearly essential for our survival, any depletion of which, when exposed to Mycoplasma, jeopardizes the metabolism of the entire network of operations – circulatory, digestive, endocrine, immune, lymphatic, muscular, nervous, reproductive, respiratory, skeletal, and urinary functionality; eroding the under-developed core circuitry that houses a baby’s brain & central nervous system (Myelin Sheath), while wreaking havoc in the bloodstream.

“Another problem that’s caused is in the generation of blood. The mycoplasma has a huge appetite for red blood cells because red blood cells are high in cholesterol, which gives them flexibility. This allows a red blood cell, which is 7 or 8 microns in diameter to go through a capillary that is only 4 microns. When the mycoplasma removes the cholesterol from the membrane of the red blood cells, they can’t get through the capillaries and it cuts off blood (oxygen supplier) to the brain.” –(Professor Donald Scott, MA)

Lipid peroxidation is associated with cellular damage resulting from oxidative stress (or Ischemia), which inhibits the capacity of cellular antioxidants, vital to natural immunity, by the unleashing of free radicals.

Scientific verification of demyelination (erosion of the casing around nerve cells) linked to mitochondrial breakdown (viability of cell function), caused by the intervention of vaccine-derived neurotoxins (Aluminum) and Mycoplasma, on early childhood development in the brain:

1. **“For the H₂O₂ (Hydrogen peroxide – end product of respiration in mycoplasmas) to exert its toxic effect, the mycoplasmas must adhere closely enough to the host cell surface to maintain a toxic, steady-state concentration of H₂O₂ sufficient to cause direct damage, such as lipid peroxidation, to the cell membrane.”** –(Medical Microbiology)

2 **“In a model of aluminum-mediated intoxication imposed to mice during pregnancy and early development, a 72% higher content of lipid peroxidation products was found in brain myelin.”** –(Department of Biological Chemistry, University of Buenos Aires, Argentina)

3. “M. pneumoniae (Mycoplasma derived pneumonia) RNA can be detected in brain tissue by nucleic acid hybridization, and the presence of the organism has been demonstrated in cerebrospinal fluid by PCR and culture, and in a recent case of fatal encephalitis, M. pneumoniae antigens were immunohistochemically detected in histopathologically involved areas of a brain biopsy and at autopsy.” -(*Future Microbiology*)

4. “One of the contaminants that’s found quite often in vaccines is Mycoplasma...(which) stimulates the release of these Reactive Oxygen Species that damage the (Fluid mosaic) membrane...by oxidizing Lipids (ie.healthy cholesterol).

If the membranes (carefully designed to maintain a polarity, chemical & electrical potential) are leaking in any way, their chemical potential runs down (Ions slip through) and the electrical potential across the membrane is short circuited. If the Mitochondria lose their membrane potential they can’t make these high energy phosphate molecules that are necessary for our energy systems.” -(Dr. Garth L. Nicolson, Institute for Molecular Medicine)

Powerful antibiotics, such as Azithromycin, Clarithromycin, Erythromycin, Alfoprstin, Dirithromycin, Evernimicin, Gatifloxacin, Linezolid, Moxifloxacin, Quinupristin, Dalfoprstin, Telithromycin, Tetracyclines and Quinolones are routinely administered to patients suffering from Mycoplasma pneumonia, with increasingly detrimental results. ‘Resistance through mutation concerns all classes of antibiotics used to treat M. pneumoniae infections.’

This combative approach merely masks the underlying symptoms, driving the infection further into hiding within deep recesses of the body.

“M. pneumoniae infection has also been associated with neurologic syndromes, such as psychosis in the elderly, meningitis, meningoencephalitis, transverse myelitis, hemiplegia, ascending paralysis, cranial nerve palsy, brain stem encephalitis and poliomyelitis-like illness. The organism is identified either by isolation at the time of the neurologic illness or by a diagnostic rise in antibody titres.” –(Joanne E. Embree, M Sc, Juan A. Embil, MD, Ph.D)

“In older children and in young adults, the (Mycoplasma) organism is responsible for approximately 15 to 50 percent of all pneumonias.” –(‘*Medical Microbiology*’)

“Besides masking poor aseptic technique, the over reliance on antibiotics can increase the severity of contamination problems. This widespread practice is also a major cause of mycoplasma contaminated cultures.” –(Bionique Testing Laboratories)

The widespread overuse of antibiotics in vaccines has only strengthened the resistance of insidious pathogens such as mycoplasma, and rendered generations of vaccinated children highly susceptible to otherwise avoidable infections, diseases & disorders.

“Examples of antibiotics used during vaccine manufacture include neomycin, polymyxin B, streptomycin and gentamicin. Some antibiotics used in vaccine production are present in the vaccine, either in very small amounts or they are undetectable.” –(FDA)

“All antibiotics are potentially neurotoxic. Given systemically the danger of convulsions and brain damage is potentiated by renal failure or blockade...” – (E.M.R. Critchley , Dept. of Neurology, Royal Preston Hospital, Lancashire, UK, Membership of the Royal Colleges of Physicians)

The connection between experimentation with human embryo fibroblast cell lines in vaccine production and the exponential growth of Mycoplasma cannot be under-estimated. This component represents the crux of the entire problem.

“Biological products such as oncolytic viruses, vaccines, gene therapy vectors, and recombinant proteins are at risk from the possibility of contamination by bacteria, fungi, mycoplasma, and viruses that must be eliminated from the final product...Cell lines used to produce the oncolytic viruses can potentially be contaminated with adventitious viral and mycoplasma contaminants. Prior to the institution of regulatory requirements in 1962, millions of people world-wide were inoculated with poliovirus and adenovirus vaccines, manufactured in rhesus monkey kidney cells, that were contaminated with

SV40...Mycoplasma contamination has been detected in 15–35% of cell lines deposited in some cell culture collections.” –(BioReliance)

Numerous childhood vaccines on the standard immunization schedule (MMR, DTaP-IPV, Hib, Hep A/Hep B, Varicella) are laced with human diploid cell residue (aborted fetal tissue): “Some vaccines—rubella, HepA, RAB-HDC, VAR, ZOS, and one form of IPV (the Poliovax contained in Pentacel)—are grown in cultured human embryo fibroblast cell lines (WI-38 or MRC-5).”

“It is estimated that about 5 to 30% of the world’s cell lines are contaminated with mycoplasmas. Mycoplasma contamination influences almost every parameter within the cell culture system...Mycoplasma infection of cell cultures might often linger for an extended period of time without noticeable cell damage.” –(‘Cell Journal’)

Strategically speaking, Mycoplasma is biologically designed to infiltrate the body’s natural defenses, harnessing the very resources we depend on for survival; typically misdiagnosed or evading detection altogether for years (“...may persist undetected in cell cultures for a long time without visibly affecting the culture. Nevertheless, mycoplasma can cause extensive alterations in the cell cultures.”).

“Mycoplasma can easily contaminate cell cultures. Traditional detection methods, cultural and immunoenzymatic often do not have sufficient sensitivity to detect low grade contaminations.” –(EuroClone)

Children coping with Autism already have a compromised immune system, made worse by the presence of Mycoplasma bacteria in the gut.

Note: “The Institute for Molecular Medicine has found that over 70% of autism patients have chronic infections, such as Mycoplasma species.” –(Prof. Garth L. Nicolson)

The accumulation of “toxic” (low-density lipoprotein type) cholesterol throughout the gut presupposes, in fact, may be a trigger point, instigating, spurring on, ultimately PROLONGING Autism related neurological, physiological, immunological & behavioral manifestations.

“Patients with neurodegenerative & behavioral disorders (ie. Autism Spectrum Disorder) often have systemic bacterial, viral and/or fungal infections that may play an important role in their pathogenesis...evidence for systemic intracellular bacterial and viral infections in a majority of patients.

For example, examination of blood leukocytes for evidence of ‘Mycoplasma spp.’, ‘Chlamydia Pneumonia’, ‘Borrelia Burgdorferi’ and other infections on the polymerase chain reaction revealed high incidences of systemic co-infections...most common co-infection found was ‘Mycoplasma’ species. The results suggest chronic intracellular bacterial infections are common features of neuro-degenerative and behavioral disorders.” –(Dr. Garth L. Nicolson, Institute for Molecular Medicine)

Pathogenic mechanisms by which Mycoplasma enters the human body include exposure to the respiratory, gastro-intestinal & genitourinary tract, through infected blood, contaminated laboratory equipment, products or personnel, and via vaccine transmission.

Note: The vast majority, if not all Veterinary Vaccines are contaminated with Mycoplasma. Your vaccinated pet could potentially transfer this infection through contact with their saliva – “Nine live virus veterinary vaccines from six sources were found to be contaminated with mycoplasma. The vaccines were for use in canine, feline and avian species, and 53 batches of the products were at fault.”

“Potentially, administration of mycoplasma-containing products could cause bacterial infections, especially in pediatric, geriatric, or immunocompromised patients. Despite precautionary measures and systematic mycoplasma monitoring, mycoplasma contamination is periodically detected in veterinary and human live virus vaccines or viral stocks produced by multiple manufacturers worldwide...Other observed effects include alteration of mutagenic assays (restructuring of cells) and lymphocyte and macrophage activation.” –(American Pharmaceutical Review)

The development and distribution of the original Small Pox Vaccine (circa 1800) established the ideal hot-house conditions for Mycoplasma cross-contamination to flourish, throughout the community.

During a time of desperate urban over-crowding, poor to middling sanitation, hygiene and nutritional standards, this medical monstrosity unleashed, set the stage for our current state of health crisis. “In 1801, when the first reliable modern census was taken, greater London recorded 1,096,784 souls; rising to a little over 1.4 million inhabitants by 1815.”

“It would seem impossible for a rational mind to conceive that a filthy virus derived from a Small Pox corpse, the ulcerated udder of a cow or the running sores of a sick horse’s heels and cultivated in scabbed festers on a calf’s abdomen could fail to have disastrous effects when inoculated into the human body.” –(Dr. Beddow Bayly, 1936)

The species was first identified, under the microscope, as early as 1898, “isolated from bovine sheep suffering from pleuropneumonia (lung plague).”

The unique epidemiology and increasing precision of Mycoplasma, impacting an array of human diseases, disorders & syndromes, has some prominent researchers in the Medical Field convinced of collusion at the highest levels of Government – by deliberately re-engineering its active components, to be distributed via mass vaccination programs, mainly Small Pox, Hepatitis B, MMR, DPT, IPV, for strictly nefarious reasons.

Similarities between Mycoplasma and the [T-cell disruptor](#) in acquired immune deficiency syndrome (AIDS): [“DNA or antigens of the pathogenic mycoplasma or other genetically and serologically closely related mycoplasmas in infected tissue of patients with AIDS or ARC or patients dying of symptoms resembling AIDS diseases.”](#)

[“What you’re looking at with this upper respiratory infection \(Mycoplasma pneumoniae\) is that it is a multi-factorial illness. It’s associated with a variety of chemical and biological co-factors. Just like with AIDS, it’s not the AIDS virus that ultimately kills, it’s co-factor microbes such as the Mycoplasma.”](#)

It's man-made. It can be used as a biological weapon. It was developed as an AIDS vaccine-related organism. It was extracted from AIDS patients. It is responsible for virtually all of the symptoms which AIDS patients suffer from. The AIDS virus is at best a co-factor, and not even such a strong co-factor as to bring on all of the symptoms of AIDS." -(Dr. Leonard Horowitz)

"I have all the official documents to prove that mycoplasma (commonly found in standard immunization viral vaccines) is the disease agent in chronic fatigue syndrome/fibromyalgia as well as in AIDS, multiple sclerosis and many other illnesses." -(Dr. Charles Engel, US National Institutes of Health, 02/07, 2000)

"The United States began a significant effort to investigate "causes" of epidemic diseases. In 1887, the effort was enhanced with the mandate of the U.S. Laboratory of Hygiene. This lab was run by Dr. Joseph J. Kinyoun, a deep rooted-racist, who served the eugenics movement with dedication. Two years later, 1889, we were able to identify "mycoplasmas", a transmissible agent, that is now found at the heart of human diseases, including (AIDS) HIV."

"In 1902, We organized a "Station for Experimental Evolution" and we were able to identify diseases of an ethnic nature. In 1904, we used mycoplasma to cause an epidemic in horses. In 1910...in fowl/birds. In 1918, the (Spanish) influenza virus killed millions of unsuspecting. It was a flu virus modified with a bird mycoplasma for which human primates had no "acquired immunity." -(Dr. Boyd Graves)

"These (Mycoplasma) microorganisms are now considered important emerging pathogens in causing chronic diseases as well as being important cofactors in

some illnesses, including AIDS and other immune dysfunctional conditions.” -(Dr. Garth L. Nicholson)

Regardless of how or why it got here, we are all faced with daunting task of having to neutralize this imminent threat. Eradicating Mycoplasma from the body requires a determined effort, focus on revitalizing your overall holistic health (a balance of trace minerals & antioxidants), by eliminating bad (LDL) cholesterol from our diet (depriving the pathogen of its food-source), complete avoidance of the common routes of entry, and adherence to a steady regime of proven, natural, complimentary antibiotics (food-grade diatomaceous earth, sodium bicarbonate, apple cider vinegar, virgin coconut oil, oil of oregano, organic garlic, kale, cabbage, lemon).

This process demands ongoing maintenance, self-monitoring of symptoms, varying of remedies, patiently calibrating each dosage, according to your own body's specific set of needs. Results will always vary, depending on the degree of (predominantly vaccine-derived) neurotoxic damage incurred, viral, bacterial & fungal contamination which you are contending with. Stay the course!

Mycoplasma is a hazard of the 20th & 21st Century. the dark underbelly of Western Medical Establishment dominance over natural life: altogether complicit in usurping the genuine science of the body with that of ill-conceived allopathic treatment, thus over-stepping the fundamental laws and principles of nature.

Factor in decades of vaccine mass production, the use of toxic ingredients (adjuvants, antibiotics, preservatives, sterilants, diluents, stabilizers; compounded by irresponsible laboratory procedures), cross-species experimentation with a broad range of virulent “wild” viruses & bacterium, manipulated via chemical synthesis, reverse engineered, molecularly restructured, the weaponizing of the its primary active components, etc.

Such systemic Medical Industry neglect, demonstrating callous disregard for the properties of natural immunity, and a flagrant misuse of science. has enabled this super-pathogen to taken root in the human body.

Ask yourself, where has our systemic, blind faith in outside forces gotten us thus far? The essential question is, what are you prepared to do about it? Fortunately, knowledge is much stronger than tyranny. And in the end, the truth is stronger than lies. Our children deserve the right to a brighter future, and we must, accordingly, lead by example. As always, the solution rests with you.

[Joel Lord](#) said on May 1, 2016:

“Mere fragments of mycoplasma can provoke an antigenic (allergic) reaction producing antibodies. The body learns to react to mycoplasmas, similar to poison ivy reaction, which explains why vaccines have not been successful.

Mycoplasma grows best when the thyroid is minimally active (in “hypo” state). Food allergies, Candida intensify RA (Rheumatoid Arthritis) symptoms. Patients

with other diagnoses having RA symptoms test positive for mycoplasma, other bacteria, and often viruses, fungal infections.

Live vaccines can be contaminated with mycoplasma. Cloaking behavior can fool the immune system using cell shape modification, which can infiltrate T-cells (immune cell precursors that later form mature cells with specialty functions). They mimic behavior of normal cells, hide in biofilm colonies.”

Percentage of chronic illness patients where mycoplasma is found: •Chronic Fatigue Syndrome: 50% •Fibromyalgia: 60% •Lyme Disease: 65% •Multiple Sclerosis: 50-60% •Autism Spectrum Disorders (ASD): 60-70% •Rheumatoid Arthritis (RA): 45% •Lou Gherig’s Disease (ALS): 85-90% •Gulf War Illness (GWI): 40% •Other “autoimmune” conditions: about 30%.’ Katherine M. Poehlmann, PhD <http://www.ra-infection-connection.com/Kmp%20NTA%20Presentation%2013.pdf>

Most reading this may miss the central point of this paper, and that is the suspicion is that the **Mycoplasma was engineered to be a bioweapon**. Due to the nature of its tiny size, lab work and studies of ill people, Mycoplasma has been an overlooked source of the real problem. We know that this bacterial pathogen was engineered to be more lethal, and as Dr. Anthony Fauci was doing in China, he was paying the Chinese Communist Party to increase the “gain of function” aspects to make the so-called Covid-19 more lethal. Dr. Fauci’s hands on this in many ways suggests what I have stated, a plan to kill more people, and not necessarily all at one time. And furthermore, it was done as an impetus to create useless but profitable vaccines to further damage human health. After all, Dr. Fauci was instructed to “shut down” his work on “gain of function” by President Obama. After it continued, President Trump later ordered funding to be stopped! Dr. Fauci not only illegally paid the CCP \$3.7 million initially, he paid an additional \$3.7 million for the work to continue, yet still illegal with U.S. taxpayer funds. Dr. Fauci’s actions should have been prosecuted as a criminal act.

The mainstream media is reporting that hospital emergency rooms are jammed with patients suffering from a bizarre upper respiratory infection that doesn’t quite seem like a virus. They are reporting that it’s a “mystery” flu and that the flu vaccines are ineffective against it.

“That’s all hogwash, bogus nonsense”, says Dr. Leonard Horowitz. “The fact of the matter is, we have seen this type of an epidemic since the end of 1998 and the beginning of 1999. People have been hacking and coughing with this bizarre illness that does not seem to follow any logical viral or bacterial onset and transition period.

The Armed Forces Research Institute of Pathology has registered a patent for the pathogenic Mycoplasma that is causing the epidemic. You can see the patent report in the book, ‘Healing Codes for the Biblical Apocalypse.’

Mycoplasma is not really a fungus, it's not really a bacteria, and it's not really a virus. It has no cell wall. It goes deep into the cell nuclei thereby making it very difficult to mount an immune response against it. **It's a man-made biological weapon.** The patent report explains how it causes chronic upper respiratory infections that are virtually identical to what's going on right now."

"I believe the chemtrails are responsible for a chemical intoxication of the public, which would then cause a general immune suppression, low grade to high grade, depending on exposure. The immune dysfunction allows people to become susceptible to opportunistic infections, such as this mycoplasma and other opportunistic infections", says Dr. Horowitz.

"I first began to investigate chemtrails when some were sprayed over my home in Northern Idaho. I took pictures of them, and then contacted the Environmental Protection Agency of the state who were clueless and referred me to the Air Force. They got me in touch with Centers for Disease Control Toxicology, and after about a week I received a letter from one of their chief toxicologists saying, indeed there was some amount of ethylene dibromide in the jet fuel.

Ethylene dibromide is a known human chemical carcinogen that was removed from unleaded gasoline because of its cancer-causing effects. Now suddenly it has appeared in the jet fuel that high-altitude military aircraft are emitting!"

United States Patent #5,242,820, issued on September 7, 1993 [Pathogenic mycoplasma]

Abstract The invention relates to a novel pathogenic mycoplasma isolated from patients with Acquired Immune Deficiency Syndrome (AIDS) and its use in detecting antibodies in sera of AIDS patients, patients with AIDS-related complex (ARC) or patients dying of diseases and symptoms resembling AIDS diseases. The invention further relates to specific DNA sequences, antibodies against the pathogenic mycoplasma, and their use in detecting DNA or antigens of the pathogenic mycoplasma or other genetically and serologically closely related mycoplasmas in infected tissue of patients with AIDS or ARC or patients dying of symptoms resembling AIDS diseases. The invention still further relates to a variety of different forms of vaccine against mycoplasma infection in humans and/or animals.

What follows is a fairly exhaustive list of symptoms associated with chemtrail spraying. Each symptom has been identified by various individuals who have clocked their occurrence with the onset of chemtrails being laid down over their homes or businesses. This list has been organized in a descending order, with the most commonly experienced symptoms at the top.

- Headache
- Brain fog
- Persistent cough, scratchy throat

- Congestion in chest and/or sinuses
- Fatigue
- Low energy
- Compromised immunity
- Disorientation
- Difficulty paying attention and concentrating
- Sinusitis
- Skin discomfort/irritation
- Joint pain
- Muscle pain
- Asthmatic (breathing difficulties)
- Dizziness
- Insomnia
- Disturbed sleep
- Memory loss
- Eye problems (blurred or fuzzy vision)
- Nausea
- Liver problems
- Gall bladder dysfunction
- Tinnitus (distant ringing in ears or high pitched sound after spraying)
- Neck pain
- Sore throat
- Allergy symptoms
- Hay fever out of season
- Flu-like symptoms
- Susceptibility to colds
- General weakness
- Anxiety
- Lightheaded or faint
- Depression
- Coughing up phlegm
- Sneezing
- Shortness of breath
- Vertigo
- Anger/Rage/Frustration issues
- MORGELLONS disease

Each of these symptoms is a normal occurrence in areas around the world where chemtrails have become a fact of life. Therefore, the first question one should ask themselves is the extent to which the “Chemtrail Coverup” is taking place right above them. The following essay may assist in that determination:

Chemtrail Syndrome is Finally Recognized in the Alternative Health Realm

The previous list of common symptoms has been reported for years by many within the anti-Chemtrail community who have recognized patterns between chemtrail spraying

and symptom manifestation. One point has been made with great emphasis in this regard:

The more chemtrails that appear overhead, the worse these symptoms are. Likewise, the longer the chemtrails persist, the longer these same symptoms are experienced.

When any number of chemtrail symptoms are experienced by an individual, it is now appropriate to explore the possibility that they are experiencing Chemtrail syndrome. There is not at this time a specific threshold or certain standard by which the syndrome is said to occur. The various chemtrail formulations are too numerous and often unknown to create a definitive set of chemical contaminations which must be present to constitute the syndrome. Therefore, until we have the full cooperation of the U.S. Federal Government, we are forced into a speculative posture, based on a great volume of anecdotal evidence.

The very last medical condition on the preceding list — Morgellons disease — is not a symptom; rather, it is a full blown disease process that usually takes years to manifest in its most serious form. In fact, there are websites dedicated exclusively to the research and treatment of Morgellons disease. Some of them very specifically demonstrate how chemtrails appear to provide some of the primary chemical co-factors in the causation and subsequent development of this extremely unusual and inscrutable multi-infection syndrome.

The Single Greatest Co-factor Is The Condition Of The BIOTERRAIN

Since virtually every inhabitant of Planet Earth is now exposed to chemtrail toxins and pollutants to some degree (China and Russia being the exception), it is important to point out that those with the cleanest bioterrain suffer the least from the aforementioned symptoms. Exactly what is bioterrain?

Without getting into a scientific explanation of bioterrain, suffice it to say that the cleaner one's body is, the less likely pathogenic micro-organisms will make a home in the GI tract or elsewhere. By clean we mean the blood, the lymph, the tissues and organs, etc. In other words, the fewer chemicals, toxins, pollutants, contaminants, poisons, insecticides, fungicides, herbicides, chemical fertilizers, heavy metals, food additives, food colorings, excipients, etc. that concentrate in our various organs and tissues, the less likely the bad bugs will take up residence.

However, the problem that has emerged is that the typical living environment is now permeated with more chemical, radioactive and electro-pollution than ever. The ever-increasing toxic burdens are now overwhelming the detoxification pathways of those folks who don't maintain a healthy lifestyle. Therefore, it has become necessary for those with compromised immune systems, degraded GI tracts, congested livers/gallbladders, and other weakened organ systems to take deliberate remedial initiatives. These compensatory measures can range from performing regular gallbladder flushes and liver cleanses to kidney purges and colon cleanses.

Herein lies the real danger associated with the constant onslaught of chemtrail toxins and chemicals which fall to the Earth by way of rain and air current movement. Depending on the regularity of chem-trailing in any given area, the various chemical cocktails which are dropped on the populations below will need to be detoxified. The human body is designed to process and rid itself of these chemicals, but only if the primary detox organs are functioning well.

The liver and GI tract, lymphatic system and skin are the most important in sustaining an efficient and thorough daily detoxification process. Should any of these function at a substandard level, imbalance will appear somewhere in the body. If allowed to fester over years, serious diseases like Morgellons or Hypertoxicity syndrome can develop. Which is why it is so essential to maintain a healthy lifestyle and wellness routine whenever possible.

Below is a list of some of the known chemicals found in chemtrails. A Chemtrail Cocktail is one that contains the basic ingredients such as barium chloride, aluminum oxide, synthetic polymers, bio-nano particles, and ethylene dibromide. An independent analysis of chemtrail fallout has conclusively identified many of these toxic chemicals:

- Aluminum Oxide Particles
- Arsenic
- Bacilli and Molds
- Barium Salts
- Barium Titanates
- Cadmium
- Calcium
- Chromium
- Desiccated Human Red Blood Cells
- Ethylene Dibromide
- Enterobacter Cloacal
- Enterobacteriaceae
- Human white Blood Cells-A (restrictor enzyme used in research labs to snip and combine DNA)
- Lead
- Mercury
- Methyl Aluminum
- Mold Spores
- Mycoplasma**
- Nano-Aluminum-Coated Fiberglass
- Nitrogen Trifluoride
Known as CHAFF)
- Nickel
- Polymer Fibers
- Pseudomonas Aeruginosa
- Pseudomonas Florescens
- Radioactive Cesium

Radio Active Thorium
Selenium
Serratia Marcscens
Sharp Titanium Shards
Silver
Streptomyces
Stronthium
Sub-Micron Particles(Containing Live Biological Matter)
Unidentified Bacteria
Uranium
Yellow Fungal Mycotoxins
~ List provided by StopSprayingCalifornia.com

Of course, the most logical question about this unsavory list of noxious ingredients is:
“Why are there so many known toxins included in the mix?”

More specifically, the preponderance of barium salt (barium chloride) and alumina (aluminum oxide), which are said to exist in the greatest concentration in chemtrails, is particularly alarming. Why? Because barium is well known to decrease and/or impair immune function. Aluminum oxide has its own set of problems, especially when inhaled in certain concentrations over prolonged periods of time. Aluminum, in any form, is not very easy for the body to detoxify, especially when it finds a home in the lungs.

What’s the point? The point is to dramatize just how much the geo-engineers are out of their league ... as well as out of control. The situation is quite similar to the physicians of the world who for decades over-prescribed antibiotics, only to create pervasive antibiotic resistance, which has given rise to the deadly MRSA’s which are found virtually everywhere now. Overuse and over-exposure to antibiotics, which are contra-indicated for a viral infections, have now placed the health of many at great risk.

By way of analogy, the different geo-engineering techniques are having the same negative impacts on the environment. Because of the relentless spraying of the skies throughout the world, the planetary environment will, too, hit a major breakpoint. This form of gross over-compensation in the form of weather modification chemtrailing will not –cannot — end well, so misguided and unsound are the scientific principles undergirding the whole enterprise. Truly, there is now “A Global Pandemic Of Epic Proportions” in the making.

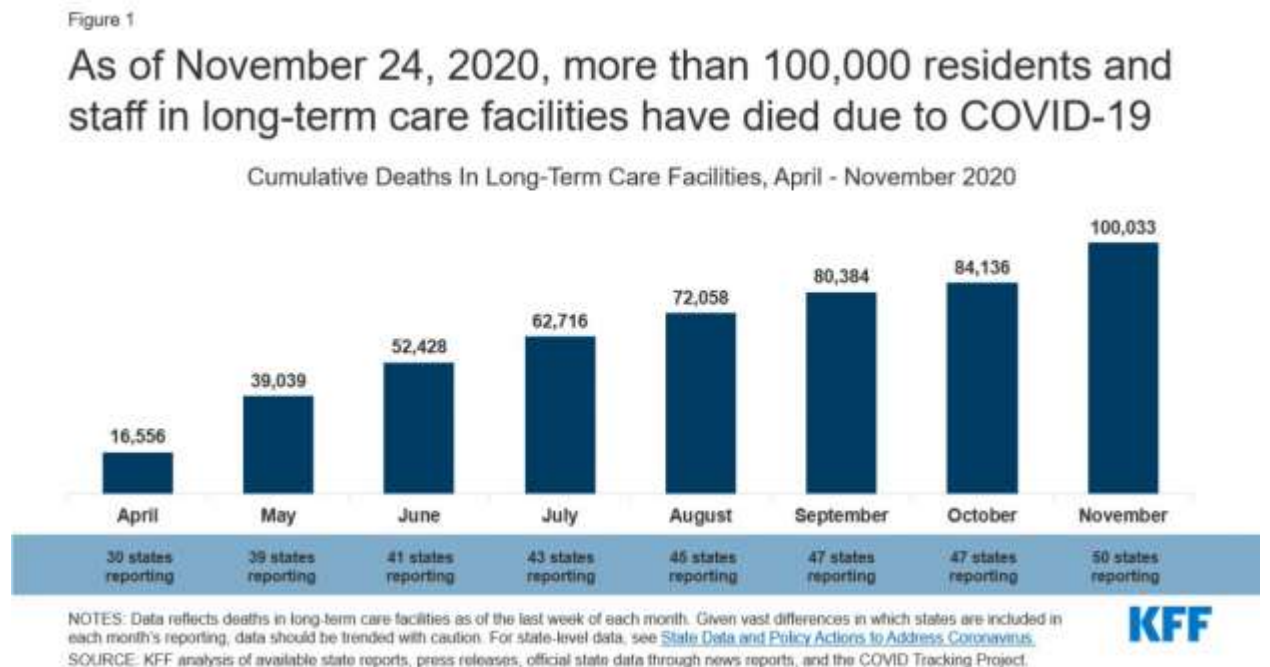

After all, just how long can the skies across the entire planet be subjected to such invasive procedures and chemical assaults. Eventually there will be a HUGE blowback. The toxic side effects to all life in the biosphere, the collateral damage to the planetary environment, and many other unintended consequences will simply overwhelm the Earth. Certainly, the radical and profound shifts in the climate patterns of the world stand as testimony to these eventualities. So do the many violent and unpredictable weather events which seems to jump off anywhere and everywhere these days.

Chemtrailing the skies of the world has greatly contributed to this global weather dynamic by exacerbating already wacky weather occurring regionally. This, in turn, wreaks havoc on the human immune system making the body much more susceptible to the many infectious diseases that continue to proliferate during this new millennium. Likewise, the chemtrail fallout which incessantly falls on people and animals, homes and business, organic gardens and farm fields, lakes and rivers, forests and grasslands, etc., inevitably contributes to the total body burden that each individual must process.

This toxic load, as it is also known, must be properly metabolized so as not to accumulate in the adipose tissue, glands, circulatory system, brain, kidneys and other major organs. The quicker and more efficiently chemical toxins are sloughed off by the body's detoxification pathways, the less likely they will cause damage. Therefore, it is very easily understood that chemtrails have placed a tremendous burden on the planet, especially on the many national populations that are routinely sprayed with the these atmospheric engineering chemicals.

As of the last week of November, Covid-19 has claimed the lives of more than 100,000 people who live and work in long-term care facilities in the United States, [according to](#) the Kaiser Family Foundation's latest analysis of state-reported data.

The following chart depicts the growth in Covid-19 deaths among nursing home residents and staff in the U.S. since April. According to the Kaiser Family Foundation (KFF), 40% of the nation's Covid-19 deaths have occurred in long-term care facilities.

"While early action to prevent the spread of coronavirus in long-term care facilities led to strict protocols related to testing, personal protective equipment, and visitor restrictions,"

KFF pointed out that "several of these measures have been reversed in recent months, and some long-term care facilities continue to report shortages of PPE and staff."

According to physician and public health expert Michael Barnett, 7.7% of the nation's nursing home residents, or one in 13, have now died as a result of Covid-19. *"Things have never really gotten better,"* he tweeted. *"Testing is a struggle, PPE and staff are daily challenges."*

Soon after reaching the "bleak milestone" of 100,000 pandemic deaths in long-term care facilities, which happened on Tuesday, the U.S. on Thursday experienced a new record-high number of coronavirus-related hospitalizations, as *Common Dreams* reported earlier Friday.

Millions of Americans have passed through airports in the past week, despite the Centers for Disease Control and Prevention's recommendation against traveling for Thanksgiving. Dr. Anthony Fauci, the nation's top infectious disease expert, does not expect conditions to improve by Christmas and the New Year.

As KFF explained, the predicted *"surge in cases after holiday gatherings and increased time indoors due to winter weather... will have ripple effects on hospitals and nursing homes, given the close relationship between community spread and cases in congregate care settings."*

The country's Covid-19 death toll surpassed 264,000 on Friday. Meanwhile, Thanksgiving marked the 24th consecutive day of more than 100,000 new daily cases in the U.S.

Given the pandemic's disproportionate impact on the high-risk populations who live and work in long-term care facilities, even more nursing home residents, employees, and their families are expected to be negatively affected by coronavirus as long as the number of infections continues to grow.

"Post-Thanksgiving surges in cases are unlikely to spare this community and will likely lead to an even higher death toll in long-term care facilities," KFF said, *"raising questions about whether nursing homes and other facilities are able to protect their residents and, if not, what actions can be taken to mitigate the threat posed by the virus."*

As the *New York Times* [reported](#) in June, when the Covid-19 death toll in long-term care facilities was just over 50,000, some critics have argued that the profit-driven nature of the private nursing home industry is the underlying problem, since treating elder care as a commodity rather than a public good can incentivize cost-cutting or money-making measures that put people in harm's way.

An investigation of long-term care facilities in Connecticut, the results of which were published in August, lent credence to that hypothesis. According to the study, *"For-profit*

nursing homes had about 60% more cases and deaths per licensed bed than nonprofit ones," while "larger facilities were hit harder than smaller ones, and... homes serving as part of a chain had worse outcomes," as Reuters [reported](#) at the time.

Sen. Sheldon Whitehouse (D-RI) noted this week that he and Sen. Bob Casey (D-PA) *"have a bill to help nursing homes protect their residents and workers from Covid-19."*

Several reports from various segments of the country are saying that 99.9% of those are under the age of 70 should have no fear of the alleged Covid-19 virus. In analyzing various reports, from the very beginning it was appearing this was about culling the elderly population.

Dr. Jay Bhattacharya, MD, PhD, from the Stanford University School of Medicine in California recently appeared on a JAMA (The Journal of the American Medical Association) Network conversation alongside Mark Lipsitch, DPhil and Dr. Howard Bauchner, who interviews leading researchers and thinkers in health care about their JAMA articles.

During the conversation, Dr. Bhattacharya said that the survival rate from COVID-19, based on approximately 50 studies that've been published providing seroprevalence data, for people over 70 years of age is 95 percent.

For people under the age of 70, the survival rate of COVID-19 is 99.95 percent. He went on to state that the flu is more dangerous than COVID-19 for children, and that we've (America) had more flu deaths in children this year than COVID deaths. The statistics confirms that but proving it becomes a daunting challenge. It became even more difficult when the CDC decided not to track and separately count the yearly flu data for 2020/21, which has never occurred previously, making their decision to not record and track yearly flu cases as being very suspicious.

I am going to close this segment with a statement of premise that will prove to be very interesting for those still alive once the story is exposed. I am more convinced today that the mystery link will be the co-factors of 5G and Mycoplasma and will continue with the evidence suggesting that Mycoplasma is responsible for many diseases and many deaths attributed to those diseases. It was a man-made bioweapon with even a patent noted above. Due to its unusual invisibility, it is either missed or over-looked by physicians and labs. Part of that is in the fact that the military after World War II kept Mycoplasma under seal with the greatest of security so that any adversarial nation might take advantage of how it became engineered for greater lethality. It does not kill directly, but rather invades the human body, and eventually attack the entire system, until death occurs.

Where this knowledge becomes extremely important is the fact that Mycoplasma has had decades to be introduced to humans through chemtrails without public awareness. Mycoplasma lies dormant in the human body until a person develops comorbidity issues, such as heart, kidney, lungs, liver, lymph, from toxic pathogens that are found in

water, food, air, environmental pollution, including electrical EMF radio wave energy. When you factor in the above noted deaths of the elderly in nursing homes you can begin to see a correlation effect.

As this article's writer mentions, there is some reason to believe that Mycoplasma has been injected into the very vaccines children are given in order to meet requirements for attending school as a child. I have on my desk a lengthy scientific paper that suggests that the alleged Covid-19 or what is labeled as such, that an infection along with Mycoplasma or other bacteria may be linked to progression to a lethal outcome.

The implications are well-founded that Mycoplasma that is ignored or left out of the picture is as lethal as the bite of a rattle snake or copper head snake. This obscure pathogen, not really a bacteria, not really a virus, not really fully defined is what I refer to in a semi-serious way, the "sin" gene. It brings death as it devours dying tissue and ultimately live cells by decomposing, until death ends its contagion. It has been believed by many in the field of cancer, to be the cause of cancer. Mycoplasma is contagious by simply touching dead road-kill, or a mouse that may have been killed by a house cat. Even pet dogs can give it to humans by their desire to lick humans in their saliva as noted in the above.

The Mycoplasma that is in everyone's body, from years of Chemtrail spraying and breathed into our lungs lies dormant until at some point it is activated by something that triggers a change in our body, and at that point the parasite consumes the life out of a person. The three things that are absolutely essential to keep the dormant Mycoplasma at bay are:

1. The body pH at optimum level
2. The blood oxygen level
3. The immune system

Dr. Tom Cowan's book '*The Contagion Myth*', discusses why one should take Vitamin C, D³, Zinc, and Elderberry, but more important how each of those functions in playing a key role in your immune system to fight off and excrete pathogens and toxins.

Because I have Lymphedema/Lymphorrhoea, I have taken measures and precautions to filter the air in my residence with a HEPA UV air filter. Even though I am not outdoors, environmental pollutants can be carried in on the bottom of the shoes of those who come and go. I am very pro-active in the three areas in which Mycoplasma can attack.

In the area of the growing number of 5G satellites, antennas, and cell towers, it is of real concern. 3G, 4G and especially 5G wireless EMF toxic RF energy can and will activate Mycoplasma. The total 5G networks has grown to just over 17,000 at the end of November, 2020, up from just over 15,000 in September of 2020. In that the focus of this series is the Global Plan to deal with "Depopulation" of the world, 5G is a key element in the 5G Strategy Plan, as noted in previous segments of this series and my articles on 5G. The Covid-19 scam is being used to cover for the 5G weapons system.

With weather turning colder as we move into December, an increase in colds and flu provide the perfect cover-story to ramp up the energy level of 5G and to kill as many people as possible without exposing the true nature and cause of deaths. **5G and Mycoplasma is the perfect “Silent Weapon for a Quiet War.”**

As the death rate rises, they have perfect reinforcement justifying lockdown, social distancing, and taking a vaccine for something that has never been confirmed to be a pathogen. It’s a scam and they are relying on public fear and ignorance as lives are being snuffed out like the 11,000 elderly in New York City nursing homes earlier this year. Dr. Tom Cowan’s book goes a long way to explain how viruses simply do not exist, but are used to label something caused by pathogens, which can be patented as a vaccine. People have been conditioned to believe that a vaccine will solve all these fear-mongering pharmaceutical firms and the media fanning the fires of fear have exploited public fear with this idea that you only get protection through a vaccine.

As an example, here is an E-mail sent to viewers of NBC affiliate Channel 11 in Pittsburgh, which was in my mail at noon on December 3rd 2020: ***“Pennsylvania shatters record for new COVID-19 cases with over 11,000; Allegheny Co. tops 1,000 for first time”*** Along with this headline, the report contained this statement:

.....
: PITTSBURGH — The Pennsylvania Department of Health reported a record-setting :
: jump in new coronavirus cases in the state. :
: :
: With 11,406 new cases, Pa. shattered its previous record for newly reported COVID-19 :
: cases. Since the pandemic began, there have now been 386,837 total cases statewide. :
: :
: According to the health department, there are currently 4,982 people hospitalized from :
: the coronavirus -- 1,048 of those are in the ICU. Most of the patients hospitalized are :
: ages 65 or older, and most of the deaths have occurred in patients 65 or older. :
: :
: Health officials said the 67,067 test results reported to the department by Wednesday :
: night is the highest number of results reported since March. The number of tests :
: administered within the last 7 days is 381,784 with 47,602 positive cases. :
: :
: The health department also reported 187 new deaths statewide. :
: :
:

Pennsylvania has 67 counties so 187 deaths amounts to just short of 2.8 deaths per county. The 2018 census data for Pennsylvania has 12.81 million residents. NBC and its affiliate channel 11 in Pittsburgh exaggerate and fear-monger the facts. This sensationalizing of the facts simply adds to people’s fear of dying from an alleged virus, which has never met the proof.

The media is owned by those with a vested interest in exploiting the narrative and to keep people in a constant state of fear, which further enables the elite to push their fake plan-demic. The above report is flawed in so many ways that it is too incredulous to believe by anyone with a high school diploma.

We are watching the de-platforming of alternative news sites even some of the more well-known sites. The UN has 110,000 volunteers that will push the idea that there is no harm in taking the new vaccine, and use social media as a platform of promoting the propaganda that vaccines are safe. Consider the source, since they were part of the original plan to establish the Club of Rome in 1968 with David Rockefeller's deep pockets. I'm older at this than most of those reading my articles. In the previous 11 segments of this series, I've made the case that the #1 issue is "Depopulation", and I have drawn from their own documents. It is not hard to prove my claim, and chances are I will continue to expose even more documents.

As the information provided in this segment reveals, the method for "**Depopulation**" centers primarily on two invisible factors:

Wireless 5G EMF through Electroporation and the hidden presence of "**Mycoplasma**" which unfortunately we all carry in our body. Minimize your time outdoors when you observe the heavy Chemtrail spraying, crisscrossing in the sky. They are like the crop dusters putting down pesticides, which by the way are done at two different levels (altitude). Jesus Christ said in the Bible that all truth would be exposed and all lies will have the light of day focused on them. Luke 12:2; Matthew 10:26; Mark 4:22; Luke 8:17; Ecclesiastes 12:14; 1st Corinthians 4:5; and John 3:20-21. In the next segment, we will look further at this prophecy in relation to where we have been over the past decade and how these people will obfuscate, and deceive the world, and perhaps the elect themselves.

Blessings,

Pastor Bob, EvanTeachr@aol.com
