

The Scientific Proof the “Gene” Therapy, a.k.a. Vaccine Does Change Your DNA And It Is the “Mark” of the Beast

The information provided for this article is from Anthony Patch, publisher and editor of Entangled Magazine. This is from his web page and corroborates everything that I have been saying and shared nearly a year ago since first providing the information on the QuantumDot/Hydrogel ID2020 and Luciferase a fluorescent material not visible to the naked eye. However, it is visible using an application on a smart phone, or other scanning type of device. Parts 12, 13, and 14 of my series on “666, 5G and the UPC Code” address this technological application. Even more important was my article on CRISPR “Gene” editing. The nature of the content is scientific but has a spiritual basis as Anthony notes.

Questions:

1. Does SARS-CoV-2, the virus (and its mutations), alter our DNA? Do the vaccines for Covid-19, the disease, alter our DNA?
2. Is this the Mark of the Beast? (Revelation 13:16-18 and 14:9-11)

Answers:

1. Does SARS-CoV-2, the virus (and its mutations), alter our DNA? Do the vaccines for Covid-19, the disease, alter our DNA?

Yes. The mRNA and DNA-based vaccines for SARS-CoV-2 the virus and Covid-19 the disease itself, permanently alters a person’s DNA, referred to as the ‘host DNA’. One of the mechanisms leading to changes in the host DNA is due to the presence, within both

the virus and its vaccines, of genetic materials incorporated from HIV-1, HIV-2, and SIV (Simian [apes, chimpanzees] Immunodeficiency Virus).¹

A second mechanism is the reverse transcription.⁴ A process occurring in stem cells, cells that develop into many different types of cells in the body. The stem cells are genetically modified and replicate and amplify to a large portion of cells that make up the tissues of the body. Stem cells serve as a reservoir to produce new cells in perpetual fashion. In this way, over time, a large percentage of our somatic (non-reproductive) cells can be replaced by these genetically modified stem-cell precursors.² This results in the transfer of genetic modification to germline cells (egg and sperm). This insertional genetic mutation would find itself in all future generations stemming from this individual or individuals. Because this is a germline modification and not a somatic modification, this new genetic element will be present in every single cell of those individuals.²

The virus is the excuse to vaccinate with the mark. The virus is only behaving as all Lentiviruses do, and that is to alter the host DNA. This enables the virus to go on and infect other healthy cells. The level of changes in the DNA as a result of having been vaccinated is quite different due to the additional technological components within them.

Additionally, the actual re-arrangement of genes, the new sequence, is more extensive than the pattern of the viral genes themselves.

According to Nobel Laureate (for the discovery of HIV) Dr. Luc Montagnier, and other researchers there are 16 genetic fragments of HIV-1, HIV-2 and SIV contained within the overall genomic sequence of the virus, SARS-CoV-2.¹ This sequence, a series of genes, is known as mRNA, or 'messenger' RNA. These same genetic fragments are also present within vaccines employing mRNA such as Pfizer and Moderna. While Johnson & Johnson utilizes DNA, as do other companies, mRNA is still present, as are these 16 genetic fragments.

Human Immunodeficiency Virus (HIV) is a Lentivirus, a subgroup of retroviruses that cause chronic and deadly diseases characterized by long incubation periods. Lentiviruses integrate viral DNA into the DNA of a host cell, permanently altering it and is inherited by the host's descendants. A retrovirus is a type of virus that inserts a copy of its RNA genome into the DNA of a host cell that it invades, thus permanently changing the genome of that cell.

There is yet another mechanism at work in the alteration of the host DNA by HIV-1, HIV-2 and SIV. A third strand of DNA, referred to as a central DNA flap, ensuring integration of the viral DNA.³ Due to the presence of genetic fragments of HIV, this DNA flap is found in not only the virus SARS-CoV-2, but within the mRNA and DNA-based vaccines.

Vaccines are derived from the virus without inducing the disease. It does this by stimulating the production of antibodies by the immune system in order to provide

immunity. The genetic materials of the virus are used to produce a vaccine against it. Thus, the 16 genetic fragments of the Lentivirus HIV, a retrovirus, are present in all gene-based vaccines for the virus, SARS-CoV-2. Both the virus and the vaccines permanently alter the DNA of a person.

This infographic illustrates the HIV replication cycle, which begins when HIV fuses with the surface of the host cell. A capsid containing the virus's genome and proteins then enters the cell. The shell of the capsid disintegrates and the HIV protein called reverse transcriptase transcribes the viral RNA into DNA. The viral DNA is transported across the nucleus, where the HIV protein integrase integrates the HIV DNA into the host's DNA. The host's normal transcription machinery transcribes HIV DNA into multiple copies of new HIV RNA. Some of this RNA becomes the genome of a new virus, while the cell uses other copies of the RNA to make new HIV proteins. The new viral RNA and HIV proteins move to the surface of the cell, where a new, immature HIV forms. Finally, the virus is released from the cell, and the HIV protein called protease cleaves newly synthesized polyproteins to create a mature infectious virus.

<https://www.niaid.nih.gov/diseases-conditions/hiv-replication-cycle>

2. Is this the Mark of the Beast? (Revelation 13:6,17,18 and 14:9-11)

Yes. In combination with the genetic alterations induced by the virus and the vaccines, the vaccines themselves contain components marking, or indicating the DNA has undergone these changes. There are several aspects to the mark, including both biological and spiritual.

Briefly, the biological. In addition to the genetic materials cited in answering question 1, the vaccines contain an enzyme known as Luciferase. This is a fluorescent material not visible to the naked eye. However, it is visible using an application on a smart phone, or other scanning type of device. Also contained within the vaccines is a type of highly absorbent gel known as hydrogel, made up of large molecules known as polymers. Hydrogel is used to carry genetic materials, Luciferase and other components making up the vaccines. Some of these are referred to as nanobots, molecules that can be programmed to carry out a specific task. The nucleic acids of DNA naturally self-assemble and this ability is used to design, and through genetic modification, program them. Nanobots are used to carry drugs and molecular payloads to specific targets within the body. Additional nanobots function as biological sensors, collecting information from within the body and capable of transmitting this digital information outside of it. Lastly on the nanoscale, which is measured in billionths of a meter, are quantum dots, also referred to as artificial atoms. These are actual semiconductors with both optical and electronic properties. Similar to Luciferase, quantum dots however emit visible light. These have also been referred to as tattoos.

All of the above materials are contained within the present day vaccines. Some, like the quantum dots, have yet to be activated. This is accomplished by their receiving an electromagnetic signal transmitted through a 5G Wi-Fi system. Soon, the hypodermic needle and syringe used to inject vaccines will be replaced by a microneedle array patch, much like an adhesive bandage. In this way, the vaccines will not require refrigeration, and can be applied by most anyone to themselves. In fact, they can be shipped, mailed and delivered to nearly everyone. As the name implies, the patch contains a group of small needles that when pushed against the skin feel similar to Velcro, with little to no pain. These needles then dissolve leaving only their tips

embedded beneath the surface, delivering their cargo to be absorbed into and distributed through the bloodstream to every cell in the body.

Taken together, the quantum dots and Luciferase manifest as a tattoo just beneath the surface of the skin. As such, a device will be required to see these, to detect the presence of this biometric mark anywhere on the body. Smartphones equipped with technology to detect these materials already exist. When described in Revelation 13:6, the mark is received in the right hand, or forehead, this can be interpreted as locations of convenience for scanning and detecting the presence of the mark. Similar in fashion to the present use of a digital thermometer applied to the forehead in checking for an elevated body temperature.

Messenger RNA (mRNA):

https://en.wikipedia.org/wiki/Messenger_RNA

Mechanism of mRNA Transport in the Nucleus

"We found that the rate of Messenger RNP (mRNA-protein) diffusion is so fast that mRNP complexes are dispersed throughout the nucleus soon after their synthesis and well before the onset of significant export into the cytoplasm."

"Using molecular beacons to track single mRNA molecules in living cells, we have characterized the diffusion of mRNP (mRNA-protein) complexes in the nucleus. The mRNP complexes move freely by Brownian diffusion at a rate that assures their dispersion throughout the nucleus before they exit into the cytoplasm, even when the transcription site is located near the nuclear periphery."

Abstract - Recent Advances in the Molecular Beacon Technology for Live-Cell Single-Molecule Imaging

Nucleic acids, aside from being best known as the carrier of genetic information, are versatile biomaterials for constructing nanoscopic devices for biointerfacing, owing to their unique properties such as specific base pairing and predictable structure. For live-cell analysis of native RNA transcripts, the most widely used nucleic acid-based nanodevice has been the molecular beacon (MB), a class of stem-loop-forming probes that is activated to fluoresce upon hybridization with target RNA.

mRNA modifications: Dynamic regulators of gene expression?

Thomas Philipp Hoernes, Alexander Hüttenhofer, and Matthias David Erlacher

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5014007/>

The expression of a gene is a tightly regulated process and is exerted by a myriad of different mechanisms. Recently, RNA modifications located in coding sequences of mRNAs, have been identified as potential regulators of gene expression. N6-methyladenosine (m6A), 5-methylcytosine (m5C), pseudouridine (Ψ) and N1-methyladenosine (m1A) have been found within open reading frames of mRNAs. The presence of these mRNA modifications has been implicated to modulate the fate of an mRNA, ranging from maturation to its translation and even degradation. However, many aspects concerning the biological functions of mRNA modifications remain elusive. Recently, systematic *in vitro* studies allowed a first glimpse of the direct interplay of mRNA modifications and the efficiency and fidelity of ribosomal translation. It thereby became evident that the effects of mRNA modifications were, astonishingly versatile, depending on the type, position or sequence context. The incorporation of a single modification could either prematurely terminate protein synthesis, reduce the peptide

yield, or alter the amino acid sequence identity. These results implicate that mRNA modifications are a powerful mechanism to post-transcriptionally regulate gene expression.

Post-transcriptional mRNA modifications might even possess the potential to expand the diversity of proteins through recoding. Therefore, it is of utmost importance to elucidate all mechanisms behind. mRNA modifications not only affect translation, but can also act as markers to provide landing platforms for proteins^{61,62,85,86} or stimulate other regulatory processes like mRNA degradation⁶⁰ or localization.⁸⁷ Their role as markers is reminiscent of the regulation of gene expression through epigenetic DNA and histone modifications. In line with that, no single modifications but a combination thereof might collectively mediate biological functions.

WIKI: Viral Vectors: Viral vectors[edit]

Main article: Viral vector

Viral vectors are generally genetically engineered viruses carrying modified viral DNA or RNA that has been rendered noninfectious, but still contain viral promoters and also the transgene, thus allowing for translation of the transgene through a viral promoter. However, because viral vectors frequently are lacking infectious sequences, they require helper viruses or packaging lines for large-scale transfection. Viral vectors are often designed for permanent incorporation of the insert into the host genome, and thus leave distinct genetic markers in the host genome after incorporating the transgene. For example, retroviruses leave a characteristic retroviral integration pattern after insertion that is detectable and indicates that the viral vector has incorporated into the host genome.

U.S. Congressional Bill: H.R. 6666 – Covid-19 Testing, Reaching, and Contacting Everyone (TRACE) Act of the 116th Congress (2019-2020)

<https://www.congress.gov/bill/116th-congress/house-bill/6666/text>

I realize that this article conflicts with many of the Judas Goats that have believed what the government health agencies have obfuscated the truth with deceit and deception they think people will believe. There are many Christian pastors and leaders with significant viewing audiences that have been miss-led by the “blind leading the blind” and doing the same. **“Let them alone: they be blind leaders of the blind. And if the blind lead the blind, both shall fall into the ditch.”** -(Matthew 15:14). The New Living Translation, begins with **“so ignore them. They are blind guides leading the blind, and if one blind person guides another, they will both fall into a ditch.”**

In essence, Anthony Patch has stated everything that I was writing last summer and fall. The only difference lays in our writing styles as well the approach we followed in how we broke it down for the reader. Since most people are not trained in the “hard” sciences, a vernacular term that refers to: Biology, Biochemistry, Chemistry, Biomedicine, Bioelectricity, it becomes a challenge to absorb and understand.

Anthony Patch brought up what I was relating how the importance of 5G wireless energy will play in the subsequent activation of the ID2020 portion of the “Mark”. All last year the telecoms worked six days a week, and with government-exemption as an “essential” economic activity that went on continuously all of last year and continues to the present time. 5G is much more than having a “smart” phone. It operates at the speed of fiber optics. 5G is 23X the speed of 4G, approaching 50 gigabytes of data transfer a second!

I included an interesting chart on the next page for Bill Gates new ID2020 showing that in English gematria, this whole package even has the number of the Beast – “666” within its name. I have a folder of material that may or may not determine whether a future chapter 15 is needed for my eBook on “666, 5G and the UPC Code”. Our DNA is in every bit of detail as similar as is the UPC (Universal Product Code), We actually are using the “Mark” of the Beast in a number of other ways; i.e., Social Security Number, Postal Zip, Bank Checking Account Routing Numbers, etc.. Those are some of the more obvious, but there are others. If you thought you could avoid the “Mark” of the Beast of Revelation 13:17 forget it. It’s been here visibly since 1935, physically speaking. Spiritually speaking, it has been around since the Babylonian culture, thousands of years ago. Where it has been unique in our world today comes because it can be read two ways, right side up or wrong side down, i.e., 666/999 and function!

There is a dynamic in all of this which plays into why the “Mark” will result in ultimate death. If we look closer at Revelation 16:2, we have a possible explanation ***“And the first went, and poured out his vial upon the earth; and there fell a noisome and***

grievous sore upon the men which had the mark of the beast, and upon them which worshipped his image.” (Continued on page 12)

Revelation 14:9-11 does offer us an idea of the torment of the humans who has received the “Mark” and see a corollary that could possibly be an image of this picture of 5G and the “gene” therapy action of the Mark. I will ponder this further..

“⁹And the third angel followed them, saying with a loud voice, If any man worship the beast and his image, and receive [his] mark in his forehead, or in his hand, ¹⁰The same shall drink of the wine of the wrath of God, which is poured out without mixture into the cup of his indignation; and he shall be tormented with fire and brimstone in the presence of the holy angels, and in the presence of the Lamb: ¹¹And the smoke of their torment ascendeth up for ever and ever: and they have no rest day nor night, who worship the beast and his image, and whosoever receiveth the mark of his name.”

I spent my Resurrection Sunday reading the Greek text for those specific passages, and I would like to run this by a Greek professor I know. My problem is that he is not a scientist and does not know much of anything about 5G wireless energy.

The connection is less than direct, yet one can see an allusion in the textual symbolism obscurity of the physical torment that comes with a technology advancement that as Dr. Martin Pall sees the future of 5G. Dr. Martin Pall is a retired emeritus Chairman of Biochemistry and Basic Medical Sciences at Washington State University. Dr. Pall is a major scientific expert and opponent to 5G advocates in testimony at legislative hearings. Dr. Martin Pall bluntly defines this technology as a “Extinction Level Event”. While not as eloquent as Dr. Pall’s statement, I came to the view that “The Technological advances of 5G have surpassed humanity’s ability to adapt.”

Dr. Arthur Firstenberg’s book, ‘*The Invisible Rainbow: The History of Electricity*’ documents how humanity has physically adapted to each new level of development of electricity beginning first with the invention of the telegraph up to and including wireless energy communication. Simply put, the Internet of Things and all that comes with speed has a price which unfortunately is that our bodies suffer inevitable damage from the energy needed to sustain this world technocracy.

This Is A Genocidal Depopulation Event!

Blessings,

Pastor Bob, EvanTeachr@aol.com
