

Dr. Fauci's Long Criminal History

Part 6

A Devout Jesuit Coadjutor Exposed

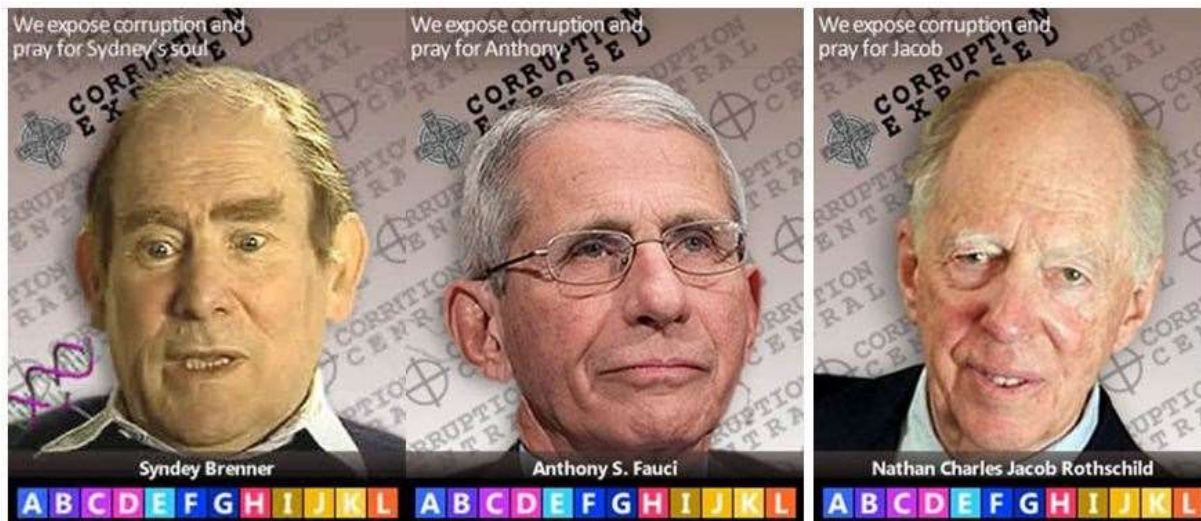

Whistleblower Nails Fauci, Rothschild's, Highlands Group, DARPA, DoD, Pirbright, Goldman Sachs, US Navy, US Air Force, US Army, CIA in Worldwide Bioterror

WHISTLEBLOWER: Tony Fauci involved in weaponization of novel DNA biotechnology in bio-warfare with DoD, DARPA, Pirbright, Rothschild, Goldman Sachs, US Navy, US Air Force, US Army, and CIA

Wikipedia hides all of Rothschild's massive involvement in early U.S. biotech

Dr. Fauci is responsible for the death of up to 500,000 who died from the Dr. Fauci AZT treatment in the 1980's. In this segment we find out his deeper connection to the House of Rothschild. Watch this video on the criminal doctor of 40 years. <https://www.brasscheck.com/video/needless-suffering-and-death/>

Victor Rothschild and his **N.M. Rothschild Asset Management** formed **Biotechnology Investments Limited (BIL)** on the heels of the UK Cabinet Commission he led to reorganize British R&D. This insider trading gave him an early lead in setting up bio-technology research firms to be the first to exploit “novel” DNA manipulations products.

This finance-led bio-technology feeding frenzy has left humanity with a real mess. Profit hounds devoid of any ethics were driving science, and not the other way.

Coronavirus is just the tip of the iceberg of “novel” bio-warfare products they have created.

Newly discovered whistleblower information reveals that the NIH’s Anthony S. Fauci is at the epicenter of exploitation of nanotube, nanowire and nanopore delivery systems to weaponize all of this immoral bio-technology research. Nobel biologist Sydney Brenner was Victor Rothschild leading scientific step and fetch it boy in this Pilgrims Society project.

[David Leathers. \(Mar. 09, 1982\).](#) Newsclippings re. Bio-technology Investments Limited (BIL) owned by N.M. Rothschild Asset Management, compiled by David Leathers, SB/4/2: Bio-technology and Medical Company Reviews, No. 74938. CSHL Archive Repository.

Biotechnology investment funds remain unused

BY DAVID FISHLOCK, SCIENCE EDITOR

N. M. Rothschild is having difficulty finding sound biotechnology investments for the £25m venture capital fund the bank opened last year.

Of a total of \$47.8m (£25.8m) subscribed to Biotechnology Investments, a Guernsey-registered fund, only \$11.6m has been invested so far.

An interim report from the fund says it is likely that the assets will not be fully invested "for some time."

The fund, of which Lord Rothschild, the biologist and former head of the Whitehall

"think tank," is chairman, has exacting scientific and financial standard for its investments.

It has made four investments in unquoted biotechnology companies, all in the U.S. In the case of the biggest Agrigenetics—a plant science company whose chairman is also a director of Biotechnology Investments—it has made two investments of \$625,000 and \$547,000.

Other unquoted investments are Applied Biosystems of San Francisco, Applied Molecular Genetics of Los Angeles, and Repligen of Cambridge, Massachusetts.

Financial Times Thursday March 4 1982

Cuts hit U.S. biotechnology jobs

BY DAVID FISHLOCK, SCIENCE EDITOR

Biotechnology Investments, the Rothschilds fund devoted to investment in such companies, has just invested in Integrated Genetics of New York.

The company is only one year old and has obtained its first major financing from several venture capital funds, including \$1m (£550,000) from the Rothschilds fund.

TECHNOLOGY

BIOTECHNOLOGY INVESTMENTS' LATEST REPORT HIGHLIGHTS AN IMPRESSIVE PORTFOLIO

Blue chip genes promise high returns

BY DAVID FISHLOCK, SCIENCE EDITOR

"OUR INTENTION is to seek a much higher than average return on the unquoted part of your portfolio within a three to seven-year time-scale," Lord Rothschild says in the second annual report of Biotechnology Investments. His report suggests that it is making good progress—indeed, it reads like a catalogue of the "blue chip" end of the spectrum of new biotechnology companies which have blossomed in the past few years.

Increase

With two-thirds of the \$1m fund now invested, almost equally in quoted and unquoted biotechnology companies, it is showing a 25 per cent increase in net asset value per share on the year, and

Biotechnology Investments, set up on the initiative of Lord Rothschild, as an offshoot of N. M. Rothschild Asset Management, now has a portfolio of 21 investments, both big and very small. All unquoted companies must still meet the strict criteria laid down by the directors. Lord Rothschild summarises the five rules as follows:

● "It must employ not only scientists of high calibre but also first-rate business managers, so that the team is ready and able to establish a successful venture."

● Its business plan should clearly define its research and product areas, and contain both a market analysis and a realistic assessment of the competition.

● Its potential rate of return must be in line with the risk being taken.

● It must have a sponsor to act as lead investor and to accept responsibility for the venture. (Although the fund itself has been known to act in this role.)

● The company must have plans for releasing the investment, normally through a public share issue.

In the year ending May 31, the fund received 82 investment proposals, of which 37 came from the U.S., compared with 16 from Britain, three from Israel and one apiece from Belgium, Canada, Finland,

| Repligen | 9.5* | U.S. | Health care and agri-science |

* Shortly to be increased. † New public.

France, West Germany and Ireland.

Of these, it chose three U.S. companies in which to invest: Catalytica, where the \$1m invested will go mainly to support the use of enzymes in petrochemical processes; CW Ventures, a fund which invests in health care; and Immune, a company with close links to Hoffman-La Roche and high hopes of leading the field with a treatment for AIDS (auto-immune deficiency syndrome).

Change

By this summer the scene had changed dramatically. No fewer than four of the fund's investments have gone public, in each case advantageously: Amgen, Applied Biosystems, Integrated Genetics, and Immune (see table). Mr David Leathers, investment manager, says that the fund has no intention of selling companies which go public, but will still continue to apply the five rules by which they judged the original investment. Even so, he admits that the fund did not expect so many of its unquoted investments to go public so soon.

Another dramatic change is the view the fund takes of

British biotechnology investments. In the past Lord Rothschild has been forthright in expressing disappointment with the calibre of companies coming forward with investment proposals. Other London finance houses have suggested that they see the need for a more creative approach in Britain, to produce packages appropriate to a situation, rather than passively judge a proposal as Biotechnology Investments has tended to do in the UK.

During the year the fund made its first-ever investment in an unquoted British company. It is also its biggest investment in this sector. The fund has £3.1m in Celtech, the company with an inside track to the

Criteria

Celtech, to quote brokers Scringeour, Kemp-See and Co, last month: "fulfils the main criteria necessary for mounting a successful operation in this fast-developing, highly-technical field. The management team comprises both eminent scientists and sound commercial/financial managers and the

company is able not just to make scientific discoveries but to scale-up, extract, purify, and market its products, as evidenced by its first product, the anti-interferon monoclonal antibody."

The current position, according to David Leathers, is that the fund is evaluating half-a-dozen British potential investments but has no new ones "on the front burner" from the U.S. It is, however, considering the investment of another \$1m in Repligen, one of its first investments, which now needs more cash to help build a pilot fermentation plant.

Coy

Of the British prospects, the fund is coy for the moment. One that interests them is the Agricultural Genetics Company, set up this summer as a "country cousin" of Celtech, to try to exploit the plant genetics research of the Agricultural Research Council.

As Biotechnology Investments see it, the new company has been very modestly funded by its three partners — British Technology Group, Advent and Ultramar—at the outset, until the investors see the first busi-

ness plan. Then the partners and other investors will be invited to plunge more heavily. Two of the funds' older U.S. investments, Genetic Systems and Applied Biosystems, have just announced a joint venture in immunodiagnosics, to develop two new diagnostic systems, one simple and inexpensive for doctors' surgeries, the other automated for clinics and hospitals.

These systems are aimed at the diagnosis of bacterial and viral infections, chronic illness, and cancer, cardio-vascular and genetic disease. Round at Rothschild's, they see the move as an important one for both companies.

One further recent investment which excites the fund managers is the \$1m they have poured on Genzyme, a U.S. company set up to acquire Whatman Biochemicals in Britain. This company makes diagnostic enzymes. It has since bought Koch-Light Laboratories, another British company, making fine chemicals.

Genzyme plans to use these two UK companies as a base for developing biotechnology interests. Biotechnology Investments see the company as virtually British but driven by American entrepreneurial initiative.

[rothschild-early-investments-in-biotech-hidden-by-wikipedia-etc](#)

Pilgrims Society vaccine delivery DNA manipulators

That's not all!! The entanglements of the Rothschild's to bio-weapons grows deeper with this article:

[The British Rothschild biowarfare conspiracy](#)

Tony Fauci's bio-warfare agenda with DARPA/Pilgrims Society just confirmed by whistleblower

Former defense contractor whistleblower says Fauci works with DARPA on nanobot bio-warfare weaponization

Fauci's NIH funded 15 indicted Harvard chemist-biologist Charles M. Lieber nanobot patents: U.S. Pat. Nos. 9,702,849; 10,436,747; 10,369,255; 10,355,229; 9,786,850; 9,638,717; 9,595,685; 9,457,128; 7,956,427; 7,911,009; 7,619,290; 6,716,409; 6,716,409; 6,716,409; 6,159,742

Whistleblower specifically heard super-secret [Highlands Group](#) conversations with Fauci discussing a fusion of chemistry, biology, wireless networks, encryption and nanobots into bio-weapons

The highly illegal Highlands Group (founded Feb. 1995) is funded by the Senior Executive Service (SES), DoD Office of Net Assessment and DARPA (funded 9 Lieber patents), National Science Foundation-25, USAF-15, US Navy-34, US Army-1, MITRE Corp-1, DoD-1, Harvard-3 and CIA-1

One Lieber patent (No. [7,858,965](#)) with “ballistic transport” attributes can fire killer viruses out of nano-canon dust ingested or injected into your body (funded by DARPA, Army, Navy)

May 11, 2020—We have reported for some time now about the Highlands Group. It is a super-secret technology DARPA weaponization gathering of public and private entities who meet to select promising technologies for weaponization.

Never mind that such wholly non-competitive gatherings violate The Federal Advisory Committee Act (FACA) since Highlands participants profit wildly from their recommendations. Such “public-private” relationships are the very definitions of fascism.

Never mind that the U.S. government uses the Highlands Group for racketeering by plotting the theft of the intellectual property rights of American citizens without regard for the U.S. Constitution and Bill of Rights.

This whistleblower attended multiple ultra-secret Highlands Group meetings in Washington, D.C. as a senior engineer for the likes of the U.S. Air Force, Martin Marietta, Rockwell, General Dynamics, Eaton Corp, Leidos, SAIC, Raytheon and others.

These highly-secured no-notes affairs of typical of secret societies.

Remarkably, Highlands published a website between 2000-2018. Organizer Dick O'Neill first wrote on Sep. 29, 2013: "A core element of the Highlands Group activity has been the Highlands Forum. Over the past 18 years almost fifty major meetings and twenty enrichment sessions have been held around the country. The website appears to have been taken down after about Jan. 25, 2018.

The Highlands Group participants appear to have been oblivious to their illegality of their meetings. Evidently, the opportunity to help decide which technologies would be weaponized by DoD/CIA/MI6/Pilgrims Society and commercialized by Silicon Valley was too alluring to worry about morals or ethics.

<https://web.archive.org/web/20130929052711/http://highlandsgroup.net/perspectives.php?ID=17>

Proof Fauci is helping DARPA build nanobot bioweapons

48. **Fauci, Nanobots & Biowarfare:** Rather, their discussion centered on using the [REDACTED] [REDACTED] in a presumed Black project. The parts of the conversation overheard were about **nanobots**. Future [REDACTED] systems did not include nanobots in the plan at all. Therefore,

-10-

FIRST AMENDED AFFIDAVIT OF [REDACTED]

nanobots would reasonably relate to Dr. Fauci as **biological warfare devices** that could be triggered by [REDACTED] signals that would be dramatically more effective (perhaps [REDACTED] more effective) as compared to [REDACTED].

50. As our session was drawing to a close, Dick O'Neill, who was sitting next to Dr. Fauci, spoke up and asked the whole group if [REDACTED] (the topic of our discussions) could be used in biowarfare. The question was totally out of context to the point that no one responded since biowarfare was not on the agenda. Most participants were visibly bewildered, if not shocked, by O'Neill's question. None of the participants even responded because the question caught everyone flat-footed. To this day I am unsure why O'Neill asked that question.

Figure 1: [Whistleblower. \(May 11, 2020\)](#). First Amended Whistleblower Affidavit re. Highlands Group illegal DARPA technology weaponization meetings, pp. 11-11. Anonymous Patriots.

Tony Fauci has some explaining to do!

Nonsensically, at the end of the Highlands Group session described by the whistleblower,

Fauci offered to give the participants flu vaccinations!

Keep in mind that: (1) Fauci had not been introduced in the meeting, (2) Fauci only had 40 minutes of side conversations with the organizers (Marshall, Chandler, O'Neill and Tether), (3) then Fauci offered flu vaccine injections to these total strangers after, (4) Fauci and his kibbutzing hosts had whispered for 40 minutes about the use of nanobots in biowarfare.

Is Tony Fauci the Dr. Strangelove of biowarfare?

Fauci was engaged in illegal, fascist planning with the Highlands Forum. Fauci traded on his NIH position to weaponize technologies for DARPA, DoD, Navy, Army and Air Force, not to mention the military of the United Kingdom and Commonwealth?

Given Fauci's central role in the Coronavirus COVID-19 White House task force, and his NIH funding of numerous nanoscience patents along with DARPA, CIA, Navy, Army and Harvard, the public needs to know:

Why Fauci is not a traitor to the American Republic?

What is the full extent of Fauci's loyalties to the British-American Pilgrims Society?

How did Fauci get control of so much NIH funding to practice clearly fascist financing of selected companies and researchers?

Why is the NIH funding nano-biowarfare?

**Why are Fauci's activities not racketeering of the most hideous kind?
Are nanobots from Harvard being used to spread Coronavirus? How? Where?**

The content of the Whistleblower is deeply troubling and concerning in that what has been reveal brings into question the role of the United States in this diabolical plan to use bio-weapons as the demise of humanity, and the U.S. has sufficient reasons to cover its agenda.

When the United Nations commissioned the Club of Rome in 1968, by 1972, Its leadership had decided its primary agenda was to "play god" and create "silent" weapons to depopulate the world with the least evidence that would point back to the Club of Rome as the perpetrator of this diabolical plan. World leaders knew in 1963 at the time of the publishing of the Iron Mountain Report, that world peace would be counter-productive to the issue of uncontrolled population growth.

Even today, if the U.S. government was truly concerned about your health and safety, it would have long ago removed such things as fluoridation in our water supply, a chemical that the EPA has labeled class A toxic chemical carcinogen. The public was sold a huge lie that it prevented dental cavities, it does not, rather it has resulted in a decline in the I.Q. of school children. An excellent overview is found in the DVD – "Fluoride Poison On Tap", a documentary on what's in our water?

Dr. Anthony Fauci is a Jesuit criminal, responsible for a huge fraud on vaccines that are dangerous, or ineffective in their recommended uses. This Whistleblower Report from The American Intelligence Media Aim for Truth has exposed Dr. Fauci, and government organizations that are engaged in activities that are not to the benefit of the American public. Keep in mind, anything that the U.S. could use against an adversarial enemy can also be used against its own people.

Blessings,

Pastor Bob, EvanTeachr@aol.com
