

Kill Shots Designed to Eliminate Hundreds of Millions of Unwanted People

Posted by Brandon Campbell July 30, 2022

Citing medical and scientific experts in September 2021, a study published in Australia said fast-tracked to market flu/covid jabs failed to *“pass the patentable, legal or clinical definition of a vaccine in that they do nothing to prevent infection.”*

They're gene modifying delivery systems.

“Calling them vaccine(s) is misleading and deceiving in the extreme.”

Drugs being injected into the bodies of unsuspecting hundreds of millions of unwitting people are *“(t)he most dangerous (ones) ever unleashed on the human population in the history of medicine.”*

It's unknown precisely what ingredients they contain.

Information about them is suppressed.

When taken as directed, *“they generate a synthetic spike protein which is a toxin...”*

“(I)n one of the lipid nanoparticles is grapheme oxide, a substance known to be poisonous to humans.”

Kill shots *“destroy (the human) immune system.”*

Results of so-called safety tests conducted concealed how they destroy health.

“(R)eal world data show that these drugs are” unsafe and don't protect as falsely claimed.

“Safety and efficacy were never concern(s)” in their development.

“(N)umber(s) of deaths and serious side effects are staggering.”

Historically when deaths from a new drug reached a few dozen or less, it was no longer sold for obvious safety concerns.

By some estimates, millions already perished from kill shots worldwide.

According to published CDC and European Medicines Agency data through late June, over 7 million jabbed individuals were harmed by mass-jabbing for flu/covid.

Anyone who thinks that these jabs are safe and effective is *“living an illusion.”*

Former Pfizer executive strategist, Karen Kingston turned whistleblower, a woman with over 20 years of experience as a pharmaceutical/medical device analyst explained the following:

Pfizer and Moderna flu/covid jabs are bioweapons, not vaccines.

They contain hazardous to health *“PEGylated lipid nanoparticles”* and work as follows:

- “1. a cholesterol lipid enables ingredients to be transported by the blood.*
- 2. the fossil lipid adheres to the cell membrane to make it permeable.*
- 3. an ionizable lipid provides a positive ionic charge so the mRNA can enter the cell.*
- 4. a PEGylated lipid.”*

“mRNA is very unstable.”

“It needs a ‘biosphere’ to protect it until it can enter the cell.”

“This is provided by the lipid nanoparticles and grapheme oxide.”

These ingredients harm health.

Graphene oxide and the spike protein are especially toxic.

They risk irreparable harm to all bodily organs.

The nanoparticle-based delivery system is unapproved.

Use of polyethylene glycol (PEG) is hazardous to health.

In 2017, Moderna abandoned mRNA technology and lipid nanoparticles because tests caused large numbers of adverse effects.

Yet the same gene modifying ingredients and nanoparticle delivery system are used by Moderna and Pfizer in their kill shots.

David Martin, PhD, agrees with the above analysis.

Flu/covid jabs are bioweapons, not vaccines, he stressed, adding:
Mass-jabbing may kill around 700 million people, up to 100 million in the US — over the next half dozen years.

U.S. elderly are especially targeted for elimination to greatly reduce Social Security, Medicare and Medicaid costs, he believes.

Years of planning preceded the rollout of kill shots and all else flu/covid related — with maximum harm to maximum numbers of unwanted people in mind worldwide.

Everyone administered flu/covid jabs unwittingly carry “the seeds of their own demise,” Martin stressed.

Mandated kill shots for healthcare providers in parts of the country assure the demise of countless numbers of doctors and nurses.

So fewer medical professionals will be around to treat sick and dying patients throughout much of the US, other western societies and elsewhere.

What’s going on with no end of it in prospect is the most diabolical plot against human health ever before conceived throughout history.

Protecting and preserving what’s too precious to lose requires avoidance of kill shots altogether.

The elderly are especially vulnerable because their immune systems are likely weakened.

Most elderly are also taking one, or more likely, a combination of drugs for other health issues.

The more taken, the greater the risk of adverse events.

Combining them with kill shots can hasten death.

In the West, prescription drugs are the 3rd leading cause of annual deaths after heart disease and cancer.

According to stem cell biologist Bruce Lipton, Ph.D:

“Pharmaceutical drugs kill about 300,000 people a year” in the US.

“Yet (there’s) a ‘War on Drugs’ which kills less than 30,000 people a year.”

“(W)e have a ‘War’ because 30,000 people die...but 300,000, that’s just (dirty) business as usual.”
