

Point of Law!

Karen Kingston: Pfizer Shills Falsely Claim They Can't Be Sued; Another PSYOP to Cover Crimes Against Humanity

As you know, I've been giving extensive coverage lately to the work of Katherine Watt and Sasha Latypova and now, we see Karen Kingston with her hackles up, referring to Sasha as a nefarious "*Pfizer shill*", accusing Sasha of working as a "*consultant*" for Pfizer, because "*Sasha said*" that "*Pfizer can't be held accountable*" and "*under the PREP and Cures Act, these trials never happened.*"

But Sasha said neither of those things. What Sasha did do was refer to the observations of [Katherine Watt](#), about Pfizer's motion to dismiss the fraud case brought by Pfizer subcontractor, Brook Jackson, in January 2021, when they attached another [contract called an Other Transaction Authority](#), which Katherine wrote about last May.

Unlike the other two, Katherine is not a pharma person. She is a legal expert who has pieced together the 220-year history of [the legal dismemberment of the United States](#) and Sasha recently stumbled on Katherine's work.

Sasha is part of the Enigma team that has created the [HowBadIsMyBatch.com](#) and [HowBad.Info](#) websites, to help vaccine-injured people, [which Dr Jane Ruby covered on The Stewart Peters Show](#) exactly a year ago.

[Sasha has previously stated](#) that there's evidence that the DoD, HHS, other government agencies and other governments all over the world, **in collusion with pharmaceutical companies** conspired to commit mass murder through bioterrorism and informational warfare operations, worldwide.

Sasha also named names, including the CEOs of Pfizer and Moderna when she explained why she thought the FDA 1. did not recall the EUA, 2. did not recall the product and 3. did not enforce [Current Good Manufacturing Processes](#), saying it was because:

"Health and Human Services Secretary, Xavier Becerra, FDA Commissioner, Robert Califf are running the US Government's Bioterrorism Program jointly with the US Department of Defense, Secretary Lloyd Austin, the Department of Justice, Attorney General Merrick Garland, Department of Homeland Security, Alejandro Mayorkas, Pfizer CEO, Albert Bourla, Moderna CEO, Stéphane Bancel, World Health Organization Director-General, Tedros Adhanom Ghebreyesus and many

other government and defense officials."

So, I really don't see Sasha trying to let Pfizer "off the hook" and I had a back-and-forth with Karen on TRUTHSocial last night about this, telling her I thought she'd made a rush to judgment.

Karen is focused on suing Pfizer in several jurisdictions and she doesn't want anything to distract from that. She recently posted a Substack, outlining how Florida can bring criminal charges against Pfizer and the FDA under [Florida Title 46 Chapter 790.166](#).

Katherine says this is good but she also sees another tack that would evade all invocations of Big Pharma immunity: legally classifying the Death Shot out of the medical countermeasure/ FDA pharmaceutical product framework and into the criminal DoD-bioweapon/WMD-attack framework, which could be pushed in most states, since they've all had WMD laws since 9/11.

Whereas Karen had said state prosecutors in Florida and other states need not bother going after US Presidents, HHS, DoD or other cabinet agencies, as they will only invoke national security, [Katherine argued](#):

"Make them argue that they must kill us to save us from food, water, energy and other calamities that — like the chemical and biological warfare program — are threats they themselves have demonstrably planned and implemented for at least a century for the same evil purpose: to kill people."

"Make Merrick Garland say, loudly and clearly, that Becerra, Austin and Biden are committing mass atrocities using toxic pathogens and lethal injections, 'with lawful authority.' Make them say it so everyone can hear them."

Karen might say this is all a sophisticated PSYOP to spare Pfizer. She personally told me that it would be "foolish" to try to go after the DoD.

Karen wants to put together a winnable case and I appreciate that. But does this make Katherine or Sasha a Pfizer shill? I doubt it.

Although Pfizer is currently in the act of committing mass genocide across the globe, it is just as guilty as the many bureaucrats in all branches of the US Government – and likewise, in many other governments around the world – who are also currently in the act of committing genocide, as part of a conspiracy that was hatched at least as far back as 51 years ago, in 1972, when the [Club of Rome](#) published [The Limits to Growth](#).

Ever since, we have been living through the implementation of what these aristocrats resolved to do to us. Namely, to reduce our carbon emissions by reducing *us*. We are the carbon they want to reduce and they're doing it with the Climate Change narrative, Great Reset, ESG and the deliberate implosion of all of the world's economies and governments.

In Chapter 9 of Bill Cooper's seminal 1991 book, ['Behold a Pale Horse'](#), he describes the genesis of this conspiracy, which began with the worldwide population explosion during the second half of the 20th century.

The elite were appalled and they needed to do something about it. Starting in the late 1950s, they commissioned studies and computer models from the [Club of Rome](#), which showed that by or shortly after the year 2000, there would be a total collapse of civilization and that the only things that could stop it would be severe cutbacks of the human population, the cessation of technological and economic growth, the elimination of meat in the human diet, strict control of future human reproduction and a total commitment to preserving the environment. (Eat ze bugs!)

The Club of Rome's data was used in a U.S. Government study, one iteration of which was the [Global 2000 Report to the President](#), in which it was recommended that:

"A plague be introduced that would have the same effect as the famous Black Death of history. The chief recommendation was to develop a microbe which would attack the autoimmune system and thus render the development of a vaccine impossible."

Cooper wrote that the initial \$10 million in funding for this was obtained from the U.S. Congress under HB 15090 (1969) for the DOD's 1970 budget, resulting in [Project MK-NAOMI](#) and the creation of HIV, which was carried out by Special Operations scientists at Fort Detrick, Maryland under the supervision of the CIA.

Allegedly, the COVID vaxx contains the same GP120 spike protein as HIV and we know that one of the main things the vaxx does is that it give you AIDS.

Notice how the same figures who were present during the AIDS PSYOP were also present for the COVID set piece, like Anthony Fauci and Army Colonel Deborah Birx?

I don't think either Karen or Sasha or Katherine are bad actors. I think everybody's understandably upset, in the face of the biggest crime in human history.

I do think it would have been better had Karen taken her concerns directly to Sasha before dragging her name through the mud on The Stewart Peters Show
I do think it would be ideal if Karen, Sasha and Katherine all worked together as

expert witnesses to help prosecute cases against all these criminals.

.....

Karen Kingston in the video on the Stew Peters' show that over a year ago pointed out that the FDA is culpable along with the DoD and those involved to create a "bioweapon" for the sole purpose of Genocidal murdering the U.S. population. That decision was a direct result of the Agenda 21 program in which 190 countries agreed to fight the growth of population of their individual countries, but not to share with others how they would go about "Depopulation". That so-called treaty was intentionally left ambiguous to enable sovereign states to asset their ability to claim "plausible deniability" in the event of being exposed for die offs in their countries.

Karen Kingston was a Pfizer employee charged with the responsibility of legally ensuring that all departments of Pfizer were on the same page legally to protect them from being sued. Karen has pointed out here this "Point of Law" DOES NOT exempt Pfizer's culpability and liability because the government contracted Pfizer to create a "bioweapon" for the purpose of genocidal murder of its citizens!

Karen Kingston is clarifying what might be a situation that heretofore has been to "muddy the waters" by recent reporting by Katherine Watt and Sasha Latypova that could be seen as rhetoric to indemnify Pfizer Pharmaceuticals against being sued! The "Point of Law" that is being cited does not abrogate or nullify Pfizer from being sued, nor does it prevent the FDA from being sued as well!

Blessings,

Pastor Bob, EvanTeachr@aol.com
