

# Residents Sick from Church Steeple Cell Tower; New Radiation Readings “show a three-times increase compared with the previous analysis”

By B.N. Frank

Decades of research has *already proven* that exposure to [radiation from cell towers](#) and other sources of wireless is biologically harmful. In fact, last year a [federal court ruled in favor of organizations and petitioners](#) that sued the Federal Communications Commission (FCC) for [NOT adequately protecting Americans](#) from wireless radiation exposure. Despite the ruling, the FCC (see [1](#), [2](#), [3](#), [4](#), [5](#), [6](#), [7](#), [8](#)) as well as other government and state agencies and committees (see [1](#), [2](#), [3](#), [4](#), [5](#), [6](#), [7](#)) continue to *promote and fund* the deployment *and* densification of both [5G and 4G cell towers](#) and other wireless infrastructure. [Businesses and school districts](#) continue to install **5G**, 4G, and Wi-Fi for “private networks” as well.

In the meantime, people in the U.S. *and* worldwide continue to report symptoms and illnesses after **5G** and/or 4G infrastructure has been installed and activated near them. This now includes residents of Centerville, MA.

Massachusetts Here's the Church, Here's the Steeple, Put in a Cell Site and Hear from the People.

Neighbors near a tower in a church steeple in Centerville, MA are complaining about health issues related to electromagnetic radiation exposure. *The Cape Cod Times*' reported that recent electromagnetic readings show a three-times increase compared with the previous analysis. The T-Mobile tower, which houses six antennas, was placed in the steeple in April, 2021.

Symptoms "*have been kind of accumulative*" over the past year and most recently increased dramatically, according to Janet Davis, chairwoman of the Concerned Citizens group. Davis owns a store next to the church and says she and her employees are experiencing physical symptoms including headaches, brain fog, heart palpitations, ringing in the ears, and extreme nausea. According to Davis, the closer you are to the antenna, the higher the radiation readings.

**The Times** reported the group met last Friday and created an action plan. Some efforts include alerting residents of the radiation emission readings, having professional emissions readings taken, and assessing the radiation levels.

The Concerned Citizens group was formed in 2018, and opposed the tower project. Since its inception, the group has been encouraging officials to adopt an ordinance that would "give the town some control over the location of telecom infrastructure, specifically towers and antennas."

According to Lynne Poyant, director of communications for Barnstable, "*Town staff have been working with outside counsel to develop draft regulations for wireless facilities in the public way. These regulations would update and codify our existing grant of location procedures to tailor them specifically to the installation of small wireless facilities and to ensure compliance with federal law. We expect to make a draft available to the public for comment sometime during the week of June 27.*"

The Concerned Citizens group plans to press on, according to *The Times*'. Davis said they would contact state and federal officials to report their concerns and research what emissions levels T-Mobile communicated at local meetings. They will also continue to take and record readings and catalog residents' symptoms. "We are not very optimistic," said Davis, but the group will continue to seek the town's assistance and open a dialogue with church leaders.

Most of the folks who read Pastor Bob's articles are well aware of the issue of the Best Wi-Fi at sea, they know that I have been on record for three years that the cruise ship industry was a bad investment as well as a risk to the health of the cruise ship public. Despite the CDC giving the cruise ship operators a pass to resume sailing, that has not stopped outbreaks of Covid at sea. The cruise ship industry treats any outbreaks of Covid on its ships as if it was a matter of national security. They have not been able to shut down employee leaks or cruise ship passengers from alerting the media.

Activist Post reports regularly about cell towers and unsafe technology. For more information the following websites.

[Wireless Information Network](#)

Seventy-Nine (79) COVID-19 Cases on the *Jewel of the Seas* were reported at the beginning of the 4<sup>th</sup> of July weekend, 2022. On July 2, 2022, A crew member on the Jewel of the Seas informed James Walke that the Royal Caribbean cruise ship has a total of seventy-nine (79) COVID-19 cases on the ship, amongst guests (61) and crew members (18).

The Jewel left port in Amsterdam today on a twelve day cruise to ports in Iceland and Ireland. She is scheduled to return to Amsterdam on July 14, 2022.

The cruise ships sailing nearly all have the latest **5G** EMF transceivers for their customers use. The latest **5G** EMF transceivers provide cell, data, and video for their customers. It has been a “must” for any ship sailing north of 51-degree latitude North of the Equator or 51-degree latitude South of the Equator. Before the fall of 2019 cruise ships used band-width from the GOES-East and GOES-West weather satellite for ship-to-shore communication. With cruise ship operators operating exotic trips to the icy

waters of the Arctic and Antarctic, available communications was restricted to emergency-use only.

The *Jewel* has a new infection control officer (ICO) due to the increased number of COVID-19 cases aboard the ship. The officer sent a message to the crew with these instructions and comments:

- “All crew should ONLY be wearing KN95 masks correctly (over the nose and mouth). Surgical mask or double masking is not allowed at this time. Be diligent in sanitizing in your work areas AND in home areas.
- Report to medical if you have any COVID like symptoms.
- Report any suspected guest/crew who exhibit any COVID like symptoms. This will help prevent spreading amongst the ship.
- Keep your immune system up by washing your hands, eating healthy, getting a good amount of rest, exercise and enjoyable time.
- Holding each other accountable.

The ‘Jewel’ has a tough itinerary with long cruises, demographics, weather, along with the amount of Back to Back cruisers (contamination pool), BUT I believe this crew is STRONG and RECEPTIVE who can really combat the virus spread. Let’s all work together and be diligent in our efforts. I thank all of you in advance.”

The highly contagious BA.4 and BA.5 variants are wreaking havoc in the U.S. and Europe as virtually all cruise ships at sea are inundated with COVID. The [CDC’s Cruise Ship COVID-19 Status Dashboard](#), for what it’s worth, shows that of the 94 cruise ships

sailing in U.S. waters, 92 ships are designated as orange and 2 ships are yellow. There are absolutely no cruise ships designated as green with no COVID-19 aboard.

We have received numerous comments by guests and crew members on a wide range of cruise ships operated by a number of different companies stating that there have been anywhere from a few dozen to over 150 infected people on recent cruises.

If you have been on a cruise recently and there has been a COVID-19 outbreak, let us hear from you, Jim Walker.

When we last reported on the COVID-19 status of the 'Jewel of the Seas' five days ago, there were twelve (12) crew members and seven (7) guests who initially tested positive for COVID-19 as the Royal Caribbean cruise ship was sailing around Ireland, Wales, Scotland and England.

At that time, according to Royal Caribbean, there was an increase in the number of infected crew members, leading to the staff captain sending an email to the crew members to remind them to wear KN95 masks on the ship:

*"We have unfortunately lately seen a spike in the COVID19 cases among our crew!*

*Please ensure following is strictly adhered to in order for us to break this inclining curve of C+ cases:*

*KN95 Masks are to be worn at all the times, except when in your cabin or when eating, drinking or smoking."*

When the Jewel of the Seas returned to Amsterdam from its last cruise on Friday, May 27th, the number of guests who tested positive had increased to twenty-nine (29).

The day after the Jewel of the Seas embarked on its current cruise to Iceland, half of the crew underwent antigen testing. The number of crew members infected with COVID-19 had increased to nineteen (19).

After the second half of the crew members underwent antigen tests later on Saturday, the number of ship employees who tested positive increased again, this time to a total of thirty-five (35) crew members. These infected crew members were isolated and housed in the "Red Zone" on decks three and four of the ship.

Included in the crew members infected with COVID-19 was the master of the 'Jewel of the Seas' who had just signed on the ship. He is required to isolate in his own cabin on deck nine, close to bridge.

In addition to the master, the ship's staff captain and chief safety officer also tested positive for COVID-19.

There are currently exactly 783 crew members on the Jewel of the Seas. 35 of them are infected with COVID-19. This turns out to be around four and one-half percent of the crew infected with the virus. If sailing from the U.S., the Royal Caribbean ship would be subject to an investigation by the Centers for Disease Control and Prevention (“CDC”). Because it is sailing from Europe, there obviously is no obligation to report the infection rate to a U.S. federal health agency.

This now seems to be the new normal, with cruise voyages having at least a couple of dozen infected crew members and cruise guests. Perhaps there are some cruise ships with fewer infected crew members. One problem is that an infected crew member, of course, unlike a passenger, will remain on the ship and potentially is a source of infection from one cruise to the next if they are not properly quarantined.

This raises the question: should cruise lines be required to disclose the percentage of crew members and guests on cruise ships who are positive with COVID-19? The CDC requires cruise lines to disclose the number of people who are infected with diseases from norovirus and e-coli, for example. Data arising from a norovirus outbreak on a cruise ship is publicly available when there are at least 2% of the crew or guests positive. The information can be readily viewed at the CDC’s online website.

But as matters now stand, cruise lines legally can keep outbreaks of COVID-19 secret. That’s why there are instances where there are outbreaks with several hundred people infected on a cruise and the public doesn’t know a thing about it. If there is not a legal requirement to disclose a health hazard, and no accountability if the cruise line keeps the information secret, I do not know of any cruise line with such honesty and transparency that it would disclose a danger voluntarily.

Most cruise lines lack transparency when it comes to disclosing disease outbreaks. That’s why, like this situation, it is important to have crew members or guests with first hand personal knowledge willing to reveal the true facts. This information comes from an anonymous crew member, who I have known for over a year and can be trusted to provide accurate information. But some cruise lines will not only conceal this type of information but affirmatively mischaracterize the truth.

At this point, the “new normal” seems to be that there will always be a few dozen COVID-19 cases on every cruise ship but the cruise industry will fail to disclose them to the public.

The cruise ship industry is now beyond the point of claiming they do not know that Wi-Fi or wireless EMF communications is the basis for outbreaks on their cruise ships. They have become complicit with the dishonest telecommunications industry into perpetrating the ongoing deception and fraud that will ultimately bring their industry to a crashing collapse. It is well-known that the cruise ship operators have put into place draconian policies that passengers are required to be fully vaccinated and health certification is required to for sailing, and yet the problem has not gone away as the above information confirms that Covid remains a problem.

The fact that companies that re-insure the life insurance industry more than a decade ago told the insurance industry they would not insure policies covering the wireless energy industry. Global firms like Swiss Re, Lloyds of London, and AIG more than a decade ago drew a line in the sand not to insure wireless communications policies and claims.

The rest of this article is a summary of activity of **5G** since 2018 by John Thomas of Health Impact News. This may be new to many who have not kept current with events involving **5G** EMF. The government knows much more than what John Thomas shares here since it has been involved in its military research that dates back to the early 1970s. I believe that one of the largest issues that confuse related to **5G** EMF is that those experiencing symptoms from wireless EMF is that it does not always affect each victim in the same way. By that I am saying that your symptoms may be entirely different than that experienced by me in 2010. Five days after we had Wi-Fi installed in our home, I began to experience early stages of Lymphedema of the feet and legs. My wife has almost daily headaches where we live.

by **John P. Thomas, Health Impact News**

The new fifth generation (**5G**) cellular system that is being installed in major American cities such as Dallas, Atlanta, Waco, Texas, and Sacramento [1, 3] will intensify the microwave radiation health risks for everyone living in those cities. [2]

**Eleven More Cities Targeted for 5G Deployment this Year**

The new **5G** cell systems that Verizon and AT&T are planning to install in other cities in 2018 [1, 3] will use shorter length microwaves than the existing 4G (fourth generation) systems. New generation cell phones will be able to communicate with either **5G** or 4G microwave towers to optimize connectivity.

Copper phone lines will be replaced with **5G** rooftop antennas on homes and businesses. These antennas will communicate with **5G** cell towers and with the wireless equipment in homes and offices to provide phone and broadband services.

**5G** will be the foundation for the “smart cities” of the future. [15]

### **The Safety of 5G Has Not Been Tested**

The microwave frequencies that are being used in this new generation **5G** system are in the 1-millimeter wave length.

The long-term health risks of these short microwaves have not been adequately tested and the Federal Communications Commission (FCC) and telecom companies are simply presuming that they are safe based on 1996 research. [2, 16]

### **New Research Reveals Harmful Effects of Cellular Systems**

Research on microwave frequency radiation conducted since 1996 shows that the existing 3G and 4G cellular systems are causing serious harm to human health. The **5G** systems will increase the level of harm to the level where illness and death can no longer be denied. [16]

### **Harmful Effects are Cumulative**

We now know that the development of cancer, heart disease, diabetes, Alzheimer’s and numerous other diseases and disabling symptoms are linked to the cumulative effects of microwave radiation.

Cellular systems are pushing microwave radiation into our bodies and brains 24 hours a day regardless of whether we use a cell phone or even own one. [4, 5, 16]

### **A Million or More New 5G Towers will be Erected in American Cities**

The **5G** towers will be spaced approximately 500 feet apart and will be highly visible eyesores.

The “small cell” transmitters will be mounted on top of electric utility poles, municipal buildings, schools, and in city parks, on top of street signs, bus shelters, and anywhere else telecom companies wish.

In low lying areas they might need to erect new towers that are taller than electric utility poles to accomplish their objectives. Refrigerator size electrical boxes will be attached to each transmission tower. [2, 9]

If you happen to be in an area with underground electric service, then they will erect new towers that use the underground electrical lines.

If you live or work in a densely populated area where electrical poles are very close to buildings, then you might have a **5G** cell tower located a few feet from your place of employment or your bedroom. [2, 9]

It is estimated that the daily microwave exposure generated by the **5G** system will be equivalent to living inside a microwave oven and turning it up to high and baking yourself for 19 minutes a day. [2]

### **Telecom Companies Hold the Upper Hand on 5G Tower Placement**

FCC regulations [11] make it illegal for government entities to try to delay or stop cell tower installation on the basis of health risks.

Telecom companies can sue cities and states that attempt to use health concerns to impede their cell tower building plans. [2]

### **How Harmful is 5G? Can We Stop It?**

The remainder of this article provides detailed information about the health risks of 5G and explains why the public and government entities cannot stop the rapid build-out of the 5G system despite the massive health risks.

It will link you to efforts in your state where telecom companies are seeking to enact legislation that will strip away all rights to object to cell tower placement on any basis.

My previous articles on microwave radiation dangers will provide background information to those who are not familiar with this topic. Please visit:

### **Documented Health Dangers Linked to Microwave Radiation Exposure**

# Symptoms of radio-wave sickness

\*\* US Naval Medical Research Institute (1972 Declassified)

The following three lists present the symptoms, illness indicators, and diseases that are linked to microwave frequency exposure from cell towers, Wi-Fi transmitters, and other microwave generating devices. [8, 12, 16]

**Symptoms of Damage:** These are some of the common symptoms linked to microwave exposure.

- Fatigue
- Chronic headaches
- Heart palpitations
- High pitched ringing in the ears
- Dizziness
- Disturbed sleep at night
- Sleepiness in daytime
- Moodiness
- Irritability
- Unsociability
- Feelings of fear
- Anxiety
- Nervous tension
- Mental depression
- Memory impairment
- Pain in muscles and joints
- Pain in the region of the heart
- Breathing difficulties
- Allergies
- Yeast infections
- Blood sugar swings
- Heartburn
- Bowel problems
- Thyroid dysfunction
- Weight abnormalities
- Rashes
- Immune system weakness
- Behavioral aberrations

**Hidden Illness Indicators:** These are some of the indicators of poor health resulting from prolonged microwave exposure. We are usually unaware of these threats to our health.

- Inflammation (caused by excess histamine in the blood)
- Oxidative stress
- Autoimmune responses
- Reduced blood flow to the region of the thalamus
- Pathologic leakage of the blood-brain barrier
- Myelin damage to the central nervous system
- Hormone imbalance
- Deficit in melatonin metabolic availability

- DNA damage
- Metabolic dysregulation

**Diseases and Body System Failures:** Some of the diseases and body system failures that result from multi-year microwave frequency radiation include:

- Cancer
- Heart disease
- Neurological dysfunction
- Diabetes
- Immune system suppression
- Cataracts of the eyes
- Sperm malformation
- Hearing loss
- Vision loss
- Cognitive impairment
- Alzheimer's
- Depressive mental illness
- Fetal abnormalities

### **Long-term Microwave Exposure Equals Extreme Harm**

The bottom line in microwave frequency radiation exposure is, "The longer the exposure, the more deadly the cumulative effects." [8]

In 2011, Professor Karl Hecht from the International Research Center of Healthy and Ecological Technology in Germany reported three distinct phases of illness caused by microwave radiation.

During the first phase, lasting up to 3 years, the living organism struggles to cope and compensate for the exposure to microwaves. [8]

They may experience numerous symptoms and may be aware of illness indicators, but aren't able to fix their problems unless they stop the exposure.

### **3 to 5 years of Microwave Exposure**

Professor Hecht described the damage that occurs during the second phase of exposure – 3 to 5 years of microwave irradiation. He stated:

*During this second phase, chronically irradiated people develop weakly visible, pathological neurasthenic symptoms with vagotonic reaction tendencies.*

*This means overactivity or irritability of the vagus nerve, adversely affecting function of the blood vessels, stomach, and muscles. It also means that the parasympathetic autonomic system is overactive, while sleep disorders and daytime tiredness are common.*

*Neurasthenic symptoms involve: poor appetite or overeating, insomnia or hypersomnia, low energy and fatigue, low-self esteem, poor concentration, difficulty making decisions and feelings of hopelessness.*

*In its most severe form, this phase may include a chronic disturbance of mood called dysthymia (depressive neurosis) in which a depressive mood accompanies the other physiological features listed here.*

*This might explain why millions of Americans need anti-depressant drugs and illegal narcotics to cope with their radiation-induced depressive symptoms.*

*By this end of this stage, the systemic damage may be irreversible, even if the radiation exposure ceases. [8]*

### **5 years or more of Microwave Exposure**

According to Professor Hecht, during the third Phase (5 years or more), the body degenerates into exhaustion and severe states of disease. He stated:

*This final degenerative phase produces pronounced neurasthenic symptoms with increasing pathological lapses of the regulation system, sleep disorders, daytime tiredness, and general exhaustion.*

*People who have progressed to this phase suffer a dramatic increase in chronic illnesses and elevated cancer incidence.*

*After 30+ years of environmental Wi-radiation, America's chronically-ill population certainly fits this description.*

*A 2016 study by researchers at Emory University confirms that over one half of the US adult population is now chronically ill: "The health of individuals is increasingly being defined by complexity and multi-morbidity, the co-occurrence of two or more chronic medical conditions."*

*However, not one in a million would guess that the mortal misery of cancer, heart disease, diabetes, Alzheimer's and even depressive mental illness, is inextricably connected to years of covert irradiation delivered by crafty Wi-profiteers who have been laughing all the way to their gold-lined vaults. [8]*

### **Russian Studies Revealed Microwave Harm Long Before the FCC Adopted Its Regulations**

Professor Hecht evaluated nearly 900 studies from Russian sources, which demonstrated the harmful effects of microwave technology.

The Russian research took place between 1960 and 1996 — long before the 3G and 4G cellular systems were built. [8]

## **Videos Explain the Harm of 3G, 4G and 5G**

ConsumerWatch: 5G Cellphone Towers Signal Renewed Concerns Over Impacts on Health – YouTube:

They Do NOT Want You See This!! – Cell Phone Towers Exposed! – YouTube:

## **The FCC Says we have Nothing to Fear**

This is the logic followed by the FCC to ensure safety — as long as the transmission of cell towers don't exceed the microwave radiation levels they set and cell phones don't exceed FCC standards, then the towers and phones are safe.

They have decreed that 3G and 4G towers operate at safe levels, therefore, the new **5G** towers are also safe, because they use less powerful transmitters.

The FCC isn't taking into account the proximity of transmitters and the biological effects of the shorter wave lengths. It is as if they believe that a tower that is 30 feet away from a person is less harmful than a tower that is 20 miles away.

It is as if they believe very short microwaves in the gigahertz range are less harmful than longer microwaves in the megahertz range.

Both beliefs are false!

Instead of focusing on long-term and cumulative effects of microwave radiation exposure, the FCC keeps talking about the heating effects of cell phones. [6, 7]

It is not the heating of body tissue that should be our major concern. It is the 24-hour – 7-days a week – 365-days per year exposure to microwave frequency radiation that is literally the killer. [8]

## **Public Entities that Delay 5G Implementation can be Sued**

1996 FCC regulation permit telecom companies to sue any municipality or state that prohibits the implementation of cellular service on the basis of health.

New FCC regulations adopted in 2017 have further weakened the opportunity to resist the plans of telecom companies to implement wireless systems for other reasons.

President Trump has even signed an executive order permitting **5G** towers on public lands to fulfill the national priority of building the fastest cellular system in the world. [10] Telecom companies are planning to implement the **5G** system in every major city in America by the end of 2020. As it stands right now, they have the right to do so regardless of health concerns.

## **Telecom Companies Seek State Regulations to Give Them Even Greater Freedom!**

Telecom companies are currently working in most states to establish rules that will give them complete freedom to implement their **5G** systems.

They want statewide legislation that will prevent municipal governments or planning boards from delaying their **5G** building program because of aesthetic concerns or zoning conditions.

Telecom Companies simply want to inform municipalities of their plans and then start putting up cell towers. [2, 9]

### **Some States are Not Caving in to Telecom**

Not all states are rolling over and playing dead. Some are trying to maintain some level of authority with respect to the **5G** rollout.

Sadly, however, the issue of health is a low priority, because of potential lawsuits from telecom companies.

Please use this link to find out what is happening in your state. It has an up-to-date summary of the issues with a list of legislation that is pending or has passed in many states.

### [California is Fighting 50,000 New 5G Cell Towers Linked to Cancer Risk](#)

**Summary: Are Technological Advances such as Driverless Cars and Instant Downloads of Movies more Valuable than Increases of Disease and Premature Death?**

Believe it or not, some research continues to show that microwaves are harmless. A 2017 study showed that when human skin cells in a culture were exposed to varying frequencies of microwaves for 3 hours, 70 hours, and 96 hours there were no changes. [14]

These are the kinds of silly studies that the FCC and Telecom companies use to prove **5G** safety.

They would have observed damage if the scientists had looked at the right kinds of cells. T-cells and B-cells are highly sensitive and many will die after 8 hours of microwave exposure. They also might have found damage if they did a very close look at the DNA in their cells. [16]

The 4G system is actually still being enhanced and improved even while the **5G** system is being installed and promoted. It is debatable whether the new **5G** system will provide any more benefit to the average consumer than the current 4G system. [13]

The cost of **5G** service should not be measured by the dollars invested by telecom companies to build their systems.

It must be measured in terms of the destruction of human health.

Are the promised technological advances such as driverless cars and instant downloads of movies more valuable than the occurrence of disease and premature death that these systems will cause?

*“When will America become sick enough to understand that mobile Internet in the pocket is not worth killing and dying for?” [16]*
