What you need to know from this article:

- Studies that tested blood samples for antibodies to SARS-CoV-2, the official name for the virus that causes Covid, show that about two-thirds of the population in most sub-Saharan countries do indeed have those antibodies. Since only 14 percent of the population has received any kind of Covid vaccination, the antibodies are overwhelmingly from infection.
- A research project at Njala University in Sierra Leone has found that 78 percent of people have antibodies for this coronavirus.
- In answer to the theory that death recording systems in Africa have simply missed many COVID deaths, doctors on the ground say *“it’s not possible that hundreds of thousands or even millions of Covid deaths could have gone unnoticed.”*

“We have not seen massive burials in Africa. If that had happened, we’d have seen it,” said Dr. Thierno Baldé, who runs the W.H.O.’s Covid emergency response in Africa.

Dr. Demby, the Sierra Leone health minister, who is an epidemiologist by training, agreed. *“We haven’t had overflowing hospitals. We haven’t,”* he said. *“There is no evidence that excess deaths are occurring.”*

[Via New York Times, March 2022, “Trying to Solve a Covid Mystery: Africa’s Low Death Rates”](#)

By Stephanie Nolan

KAMAKWIE, Sierra Leone — There are no Covid fears here.

The district’s Covid-19 response center has registered just 11 cases since the start of the pandemic, and no deaths. At the regional hospital, the wards are packed — with malaria patients. The door to the Covid isolation ward is bolted shut and overgrown with weeds. People cram together for weddings, soccer matches, concerts, with no masks in sight.

Sierra Leone, a nation of eight million on the coast of Western Africa, feels like a land inexplicably spared as a plague passed overhead. What has happened — or hasn’t happened — here and in much of sub-Saharan Africa is a great mystery of the pandemic.

The low rate of coronavirus infections, hospitalizations and deaths in West and Central Africa is the focus of a debate that has divided scientists on the continent and beyond. Have the sick or dead simply not been counted? If Covid has in fact done less damage here, why is that? If it has been just as vicious, how have we missed it?

The answers “*are relevant not just to us, but have implications for the greater public good,*” said Austin Demby, Sierra Leone’s health minister, in an interview in Freetown, the capital.

The assertion that Covid isn’t as big a threat in Africa has sparked debate about whether the African Union’s push to vaccinate 70 percent of Africans against the virus this year is the best use of health care resources, given that the devastation from other pathogens, such as malaria, appears to be much higher.

In the first months of the pandemic, there was fear that Covid might eviscerate Africa, tearing through countries with health systems as weak as Sierra Leone’s, where there are just three doctors for every 100,000 people, according to the World Health Organization. The high prevalence of malaria, H.I.V., tuberculosis and malnutrition was seen as kindling for disaster.

That has not happened. The first iteration of the virus that raced around the world had comparatively minimal impact here. The Beta variant ravaged South Africa, as did Delta and Omicron, yet much of the rest of the continent did not record similar death tolls.

Into Year Three of the pandemic, new research shows there is no longer any question of whether Covid has spread widely in Africa. It has.

Studies that tested blood samples for antibodies to SARS-CoV-2, the official name for the virus that causes Covid, show that about two-thirds of the population in most sub-Saharan countries do indeed have those antibodies.

Since only 14 percent of the population has received any kind of Covid vaccination, the antibodies are overwhelmingly from infection.

A new W.H.O.-led analysis, not yet peer-reviewed, synthesized surveys from across the continent and found that 65 percent of Africans had been infected by the third quarter of 2021, higher than the rate in many parts of the world. Just 4 percent of Africans had been vaccinated when these data were gathered.

So the virus is in Africa. Is it killing fewer people?

Some speculation has focused on the relative youth of Africans. Their median age is 19 years, compared with 43 in Europe and 38 in the United States. Nearly two-thirds of the population in sub-Saharan Africa is under 25, and only 3 percent is 65 or older. That means far fewer people, comparatively, have lived long enough to develop the health issues (cardiovascular disease, diabetes, chronic respiratory disease and cancer) that can sharply increase the risk of severe disease and death from Covid. Young people infected by the coronavirus are often asymptomatic, which could account for the low number of reported cases.

Plenty of other hypotheses have been floated. High temperatures and the fact that much of life is spent outdoors could be preventing spread. Or the low population density in many areas, or limited public transportation infrastructure. Perhaps exposure to other pathogens, including coronaviruses and deadly infections such as Lassa fever and Ebola, has somehow offered protection.

Since Covid tore through South and Southeast Asia last year, it has become harder to accept these theories. After all, the population of India is young, too (with a median age of 28), and temperatures in the country are also relatively high. But researchers have found that the Delta variant caused millions of deaths in India, far more than the 400,000 officially reported. And rates of infection with malaria and other coronaviruses are high in places, including India, that have also seen high Covid fatality rates.

So are Covid deaths in Africa simply not counted?

Most global Covid trackers register no cases in Sierra Leone because testing for the virus here is effectively nonexistent. With no testing, there are no cases to report. **A research project at Njala University in Sierra Leone has found that 78 percent of people have antibodies for this coronavirus.** Yet Sierra Leone has reported only 125 Covid deaths since the start of the pandemic.

Most people die in their homes, not in hospitals, either because they can't reach a medical facility or because their families take them home to die. Many deaths are never registered with civil authorities.

This pattern is common across sub-Saharan Africa. A recent survey by the United Nations Economic Commission for Africa found that official registration systems captured only one in three deaths.

Preparing a Covid vaccine in the town of Kathantha Yimbo in Sierra Leone. The lack of reported Covid cases in the country is raising questions about whether resources should be directed at more urgent problems.

The one sub-Saharan country where almost every death is counted is South Africa. And it's clear from the data that Covid has killed a great many people in that country, far more than the reported virus deaths. Excess mortality data show that between May 2020 and September 2021, some 250,000 more people died from natural causes than was predicted for that time period, based on the pattern in previous years. Surges in death rates match those in Covid cases, suggesting the virus was the culprit.

Dr. Lawrence Mwananyanda, a Boston University epidemiologist and special adviser to the president of Zambia, said he had no doubt that the impact in Zambia had been just as severe as in South Africa, but that Zambian deaths simply had not been captured by a much weaker registration system. Zambia, a country of more than 18 million people, has reported 4,000 Covid-19 deaths.

"If that is happening in South Africa, why should it be different here?" he said. In fact, he added, South Africa has a much stronger health system, which ought to mean a lower death rate, rather than a higher one.

A research team he led found that during Zambia's Delta wave, 87 percent of bodies in hospital morgues were infected with Covid. *"The morgue was full. Nothing else is different — what is different is that we just have very poor data."*

The Economist, which has been tracking excess deaths throughout the pandemic, shows similar rates of death across Africa. Sondre Solstad, who runs the Africa model, said that there had been between one million and 2.9 million excess deaths on the continent during the pandemic.

"It would be beautiful if Africans were spared, but they aren't," he said.

But many scientists tracking the pandemic on the ground disagree. It's not possible that hundreds of thousands or even millions of Covid deaths could have gone unnoticed, they say.

"We have not seen massive burials in Africa. If that had happened, we'd have seen it," said Dr. Thierno Baldé, who runs the W.H.O.'s Covid emergency response in Africa.

"A death in Africa never goes unrecorded, as much as we are poor at record-keeping," said Dr. Abdhalah Ziraba, an epidemiologist at the African Population and Health Research Center in Nairobi, Kenya. *"There is a funeral, an announcement: A burial is never done within a week because it is a big event. For someone sitting in New York hypothesizing that they were unrecorded — well, we*

may not have the accurate numbers, but the perception is palpable. In the media, in your social circle, you know if there are deaths.”

Dr. Demby, the Sierra Leone health minister, who is an epidemiologist by training, agreed. “We haven’t had overflowing hospitals. We haven’t,” he said. “There is no evidence that excess deaths are occurring.”

Which could be keeping the death rate lower?

While health surveillance is weak, he acknowledged, Sierra Leoneans have the recent, terrible experience of Ebola, which killed 4,000 people here in 2014-16. Since then, he said, citizens have been on alert for an infectious agent that could be killing people in their communities. They would not continue to pack into events if that were the case, he said.

Dr. Salim Abdool Karim, who is on the African Centers for Disease Control and Prevention Covid task force and who was part of the research team tracking excess deaths in South Africa, believes the death toll continent-wide is probably consistent with that of his country. There is simply no reason that Gambians or Ethiopians would be less vulnerable to Covid than South Africans, he said.

But he also said it was clear that large numbers of people were not turning up in the hospital with respiratory distress. The young population is clearly a key factor, he said, while some older people who die of strokes and other Covid-induced causes are not being identified as coronavirus deaths. Many are not making it to the hospital at all, and their deaths are not registered. But others are not falling ill at rates seen elsewhere, and that’s a mystery that needs unraveling.

“It’s hugely relevant to things as basic as vaccine development and treatment,” said Dr. Prabhat Jha, who heads the Centre for Global Health Research in Toronto and is leading work to analyze causes of death in Sierra Leone.

Researchers working with Dr. Jha are using novel methods — such as looking for any increase in revenue from obituaries at radio stations in Sierra Leonean towns over the past two years — to try to see if deaths could have risen unnoticed, but he said it was clear there had been no tide of desperately sick people.

Some organizations working on the Covid vaccination effort say the lower rates of illness and death should be driving a rethinking of policy. John Johnson, vaccination adviser for Doctors Without Borders, said that vaccinating 70 percent of Africans made sense a year ago when it seemed like vaccines might provide long-term immunity and make it possible to end Covid-19 transmission. But now that it’s clear that protection wanes, collective immunity no longer looks achievable. And so an immunization strategy that focuses on protecting just the most vulnerable would arguably be a better use of resources in a place such as Sierra Leone.

“Is this the most important thing to try to carry out in countries where there are much bigger problems with malaria, with polio, with measles, with cholera, with meningitis, with malnutrition? Is this what we want to spend our resources on in those countries?” he asked. “Because at this point, it’s not for those people: It’s to try to prevent new variants.”

And new variants of Covid pose the greatest risk in places with older populations and high levels of comorbidities such as obesity, he said.

Other experts cautioned that the virus remained an unpredictable foe and that scaling back efforts to vaccinate sub-Saharan Africans could yet lead to tragedy.

“We can’t get complacent and assume Africa can’t go the way of India,” Dr. Jha said.

A new variant as infectious as Omicron but more lethal than Delta could yet emerge, he warned, leaving Africans vulnerable unless vaccination rates increased significantly.

“We should really avoid the hubris that all Africa is safe,” he said.

Scientists Say Great Differences in COVID Vaccine Batch Lethality Cannot Be Accidental, as Elon Musk Enters the COVID Fray

Dr. Mike Yeadon, a former Chief Science Officer (CSO) and Vice President for Pfizer, says that given what he [says is a history of lies](#) from health authorities and government surrounding the COVID saga, he has no choice to conclude from the VAERS data that the vaccines may well be part of a program to “kill people intentionally.”

Yeadon famously publicly accused [four of his former colleagues](#) of Crimes Against Humanity and demanded they resign. So far two of them have.

Scientists continue to speak out as new Twitter owner and CEO Elon Musk calls for Anthony Fauci to be prosecuted, on grounds contained in Twitter files yet to be released.

Below: Elon Musk tweet, December 11, 2022

Within minutes of Musk’s tweet, hashtags such as #ProsecuteFauci and #FauciForPrison took flight.

Musk’s call follows the release of Robert F. Kennedy Jr.’s scorching [documentary movie](#), based on his [New York Times bestseller book](#) of the same title, [The Real Anthony Fauci](#) (version here contains Romanian subtitles but is in English.)

Fauci has been under fire many times before. Last year he drew outrage for funding what scientists said were unnecessary and [cruel experiments on beagle puppies](#), in which puppies’ heads were trapped in cages to be bitten at and eaten by sand flies.

But now a steady stream of news items daily undermines everything the public thought it knew about the government's COVID response.

Pfizer Admits COVID Vaccines Do Not Stop Transmission from Person to Person

For example, this October, in a European Parliament hearing, it was admitted by a Pfizer president that the vaccine never did and was [never tested for stopping the transmission](#) of COVID from person to person. The admission wrecked one of the central articles of faith, stressed by the likes of [Rachel Maddow](#), behind the push for vaccination: that if you were not doing it for yourself, you were doing it for others.

Even as far back as January 2022, [CDC Director Rochelle Walensky admitted](#) that the vaccines did not stop transmission. The entire reason many people got the [least-tested novel vaccine](#) in history was to 'break the chain of transmission.'

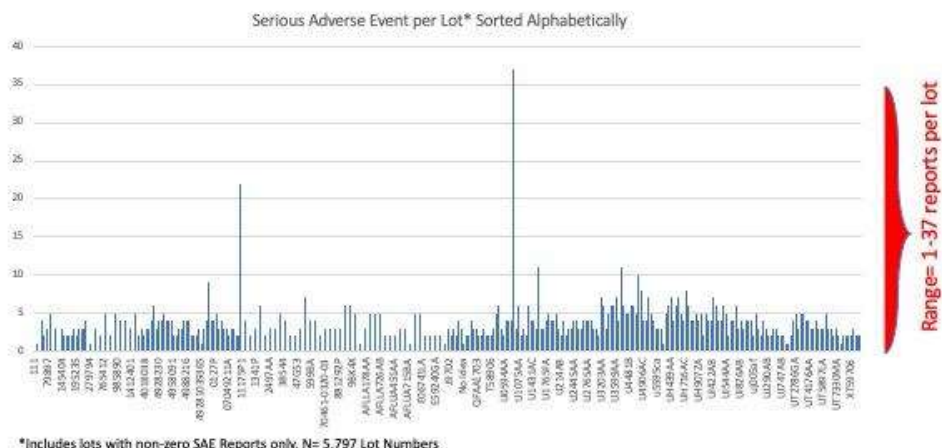

Below: MSNBC Rachel Maddow, 'COVID vaccines stop COVID transmission' Crippling COVID injection reactions ([view in Bitchute](#))

Doctor Yeadon and Dr. Wolfgang Wodarg say that vast differences in the [number of deaths, permanent disabilities](#), and other "adverse events" which are associated with different batches of the COVID vaccines cannot possibly be accidental, given the highly precise nature of drug manufacturing. The scientist's show, in a presentation, what a normal distribution of adverse events from a flu vaccine looks like, in a simple chart, compared to the batch profiles of adverse events from the COVID vaccines.

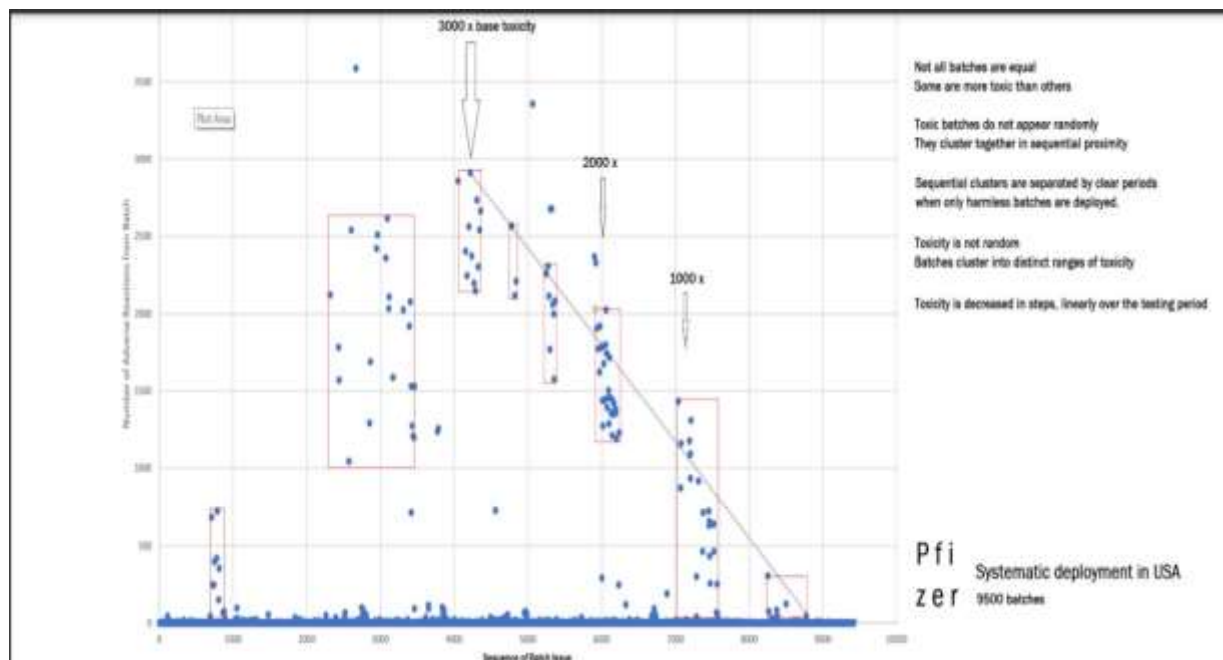

The second chart shows the number of adverse events in the Pfizer deployment of vaccine batches. The vertical axis is number of adverse events, including deaths. The horizontal axis the chronological deployment of batches, by batch issue date.

“Dose Range Finding”

Upon examining the data and analysis originally performed by [Craig Paardekooper](#), Dr. Yeadon said that, as a pharmaceuticals scientist, he immediately recognized a process called “dose range finding.” In dose range finding, varying strengths of dosage are administered in order to accurately peg the number of deaths and injuries which can be associated with each dosage level. One of Dr. Yeadon’s specialties at Pfizer was toxicology, which involves these methods.

As can be seen, batch deadliness forms a progressive line sloping downward, as if early batches start out at high dosage strength and then are cut down in a methodical manner. Yeadon and Wodarg say this would never happen unless planned this way, since drugs are manufactured to be the same dose and formula across thousands of batches and billions of doses, with an extraordinarily high level of precision.

This would allow one to estimate how many deaths can be expected for a particular dosage strength, within a certain period of time. Dr. Yeadon says that in the pharmaceuticals business this is called “dose range finding.” Wodarg, Yeadon, and others express being stunned at the logical conclusion, that a massive long-term depopulation program may be underway.

COVID Vaccines Set Up to “Kill People Intentionally”?

Despite the qualifications of Dr. Yeadon and Dr. Wodarg, and the origin of the data from the CDC’s own reporting system, the FDA has not given an explanation for the data. Dr. Yeadon says the variability in the number of adverse event reports per batch, alone, is enough to shut the COVID vaccine programs down, if safety were a concern.

The findings have been met by dead silence in the media, and the accuracy of the calculations has never been challenged.

In the [interview](#) with attorney [Reiner Fuellmich](#), who in the past brought successful lawsuits against Deutsche Bank and Volkswagon, Dr. Wolfgang Wodarg says:

“It is not true that there is the same stuff in each shot,”

Dr. Wodarg says:

“Now is the time they can do it because we are afraid...it is worse than Nuremberg...and they kill people...intentionally.”

In 2010 as head of the Council of Europe Health Committee, [Dr. Wodarg led an inquiry](#) into the controversial 2009 Swine Flu “pandemic.”

Dr. Mike Yeadon says:

“if you harboured any residual doubts about whether there is or not a depopulation agenda, this presentation destroys that doubt.”

Dr. Yeadon said in the interview:

“I am worried that this is the calibration of a killing weapon...I have got no reason to make this stuff up. I’ve never been a conspiracy theorist,”

Dr. Yeadon wrote to his [Telegram audience](#):

“You’ll be aware that one of our assiduous researchers noticed a short while ago that adverse events are not occurring randomly throughout the batches & lots of vaccines made by a given manufacturer.

Instead, it appears that just 5% of the batches / lots are associated with almost all the deaths.

Given the tight requirements of consistency associated with an authorised product, it’s absolutely impossible that this is a chance event.”

Vaccine Recipients Can See How Many “Adverse Events” Their Batch is Associated With

Anyone can find out the number of deaths and adverse events associated with the batch of the vaccine they have taken at [How Bad is My Batch](#).

Autopsies Show Direct Casual Link Between Unexpected Deaths and COVID Vaccines

Above: Microscope image of lymphocyte attack of brain blood vessel presented by Dr. Arne Burkhardt

Internationally recognized pathology professors in multiple countries have concluded that there is a direct link between the COVID vaccines and many sudden, unexpected deaths, especially in younger age people not near the end-of-life years.

Two of these pathologists are Dr. Arne Burkhardt and Dr. Walter Lang.

[Dr. Arne Burkhardt has taught](#) at the Universities of Hamburg, Berne and Tübingen. He has published more than 150 scientific articles in German and international scientific journals, and has audited and certified institutes of pathology in Germany.

[Prof. Dr. Walter Lang](#) was a pathologist at the Hannover Medical School from 1968-1985. Afterwards, for 25 years, Lang directed a private institute for pathology, which he founded, specializing in transplant pathology, extragynecological cytology, thyroid tumors, and lung/pleural pathology.

In a German [pathology conference series](#) which began in 2021, Doctors Burkhardt and Lang reported never-before-seen immune system attacks on the body's own organs.

The webpage for the [2nd Pathology Conference](#) on Dec. 4, 2021 in Berlin, Germany, [said of Dr. Burkhardt's findings](#):

“The findings confirm Prof. Dr. Peter Schirmacher’s finding that among more than 40 corpses he autopsied who had died within two weeks of COVID19 vaccination, approximately one-third of those deaths were caused by the vaccination.”

[The Epoch Times](#) reported on September 22, 2021 (click on Google translate from German to English):

“The doctors suspect autoimmune phenomena, reduction in immune capacity, acceleration of cancer growth, vascular damage “endothelitis”, vasculitis, perivasculitis and erythrocyte “clumping” as further corona vaccination side effects with potential fatal consequences...Burkhardt described it as “extreme” that among the ten deceased examined, three very rare autoimmune diseases were found, namely Sjögren’s syndrome, leukoclastic vasculitis of the skin and Hashimoto’s disease.”

[The Epoch Times](#) wrote:

“[Burkhardt] can only think of one term for what [he] has been investigating with his colleagues over the past few months – “lymphocyte amok”, potentially in all tissues and all organs.”

In its [official statement](#) on the autopsy findings, Doctors for COVID Ethics, a co-sponsor of the symposium, writes:

“A natural infection with SARS-CoV-2 (coronavirus) will in most individuals remain localized to the respiratory tract. In contrast, the vaccines cause cells deep inside our body to express the viral spike protein, which they were never meant to do by nature. Any cell which expresses this foreign antigen will come under attack by the immune system, which will involve both IgG antibodies and cytotoxic T-lymphocytes. This may occur in any organ. We are seeing now that the heart is affected in many young people, leading to myocarditis or even sudden cardiac arrest and death....”

[Doctors for COVID Ethics](#) concludes:

We herewith present scientific evidence that calls for an immediate stop of the use of gene-based COVID-19 vaccines. We first lay out why the agents cannot protect against viral infection. While no positive effects can be expected, we show that the vaccines can trigger self-destructive processes that lead to debilitating illness and death....

Even early in the vaccine roll-out, scientists like [Dr. Sucharit Bhakdi](#), Professor emeritus of the University of Mainz, winner of the [Aronson Prize](#) for achievements in microbiology and immunology, worried about what the spike proteins would do once turned loose in the body. In the below video Dr. Bhakdi gives a clear and lucid explanation of the mechanism by which the spike proteins might cause mischief.

CDC Fudges Data in Order to Make COVID Vaccines Appear Safer***

Apparently seeking to blunt autopsy studies by pathologists who say they are seeing never-before-seen phenomena in cadavers who died unexpectedly soon after COVID vaccination, a [study](#) by scientists affiliated with Kaiser Permanente, in contrast, concludes that vaccinated persons have lower, non-COVID, all-cause death rates than unvaccinated persons.

The Kaiser study would seem to throw cold water on the idea that the vaccines are killing people. But the study employs a critical deception.

Rather than count from the time that the shot begins to have effects on the body, which would be immediately, a person who is negatively impacted is not counted as being vaccinated [until 14 days](#) after the second shot in the case of Pfizer and Moderna, or 14 days after the J&J single shot. This is particularly deceptive because [80% of VAERS reports of unexpected deaths](#) post-vaccine occur within 14 days after taking a shot.

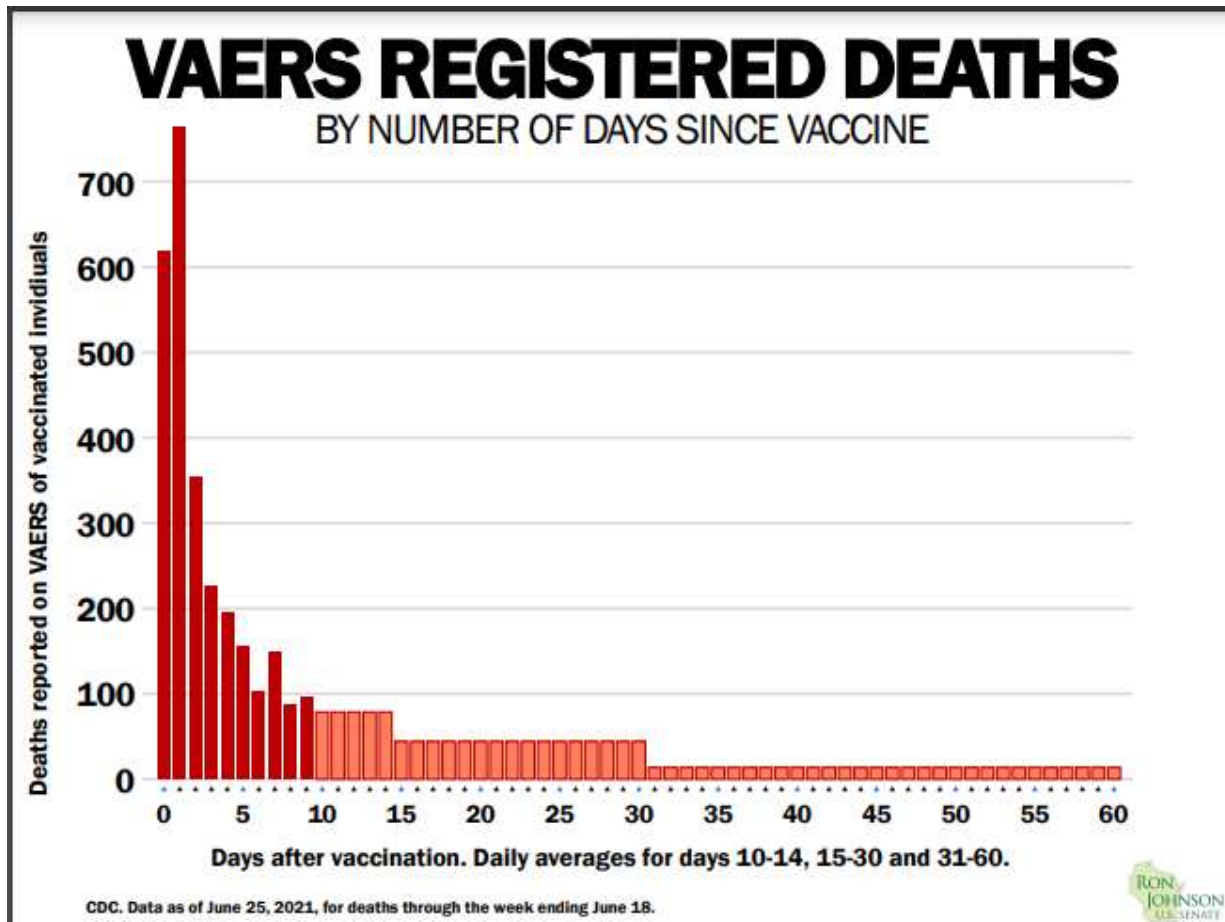

A [CDC advisory on breakthrough COVID infections](#), which means infections in vaccinated people, shows that a person is considered "vaccinated" only after 14 days have passed since the final shot:

"a vaccine breakthrough infection is defined as the detection of SARS-CoV-2 RNA or antigen in a respiratory specimen collected from a person ≥ 14 days after receipt of all recommended doses of an FDA-authorized COVID-19 vaccine."

[Children's Health Defense reports](#) that one-third of unexpected deaths after vaccination takes place within 48 hours, after receiving a shot.

This means that anyone who took a COVID vaccine shot, walks out, and falls over dead in the parking lot of a heart attack or stroke is counted as a death of an "unvaccinated" person.

[Below chart source](#)

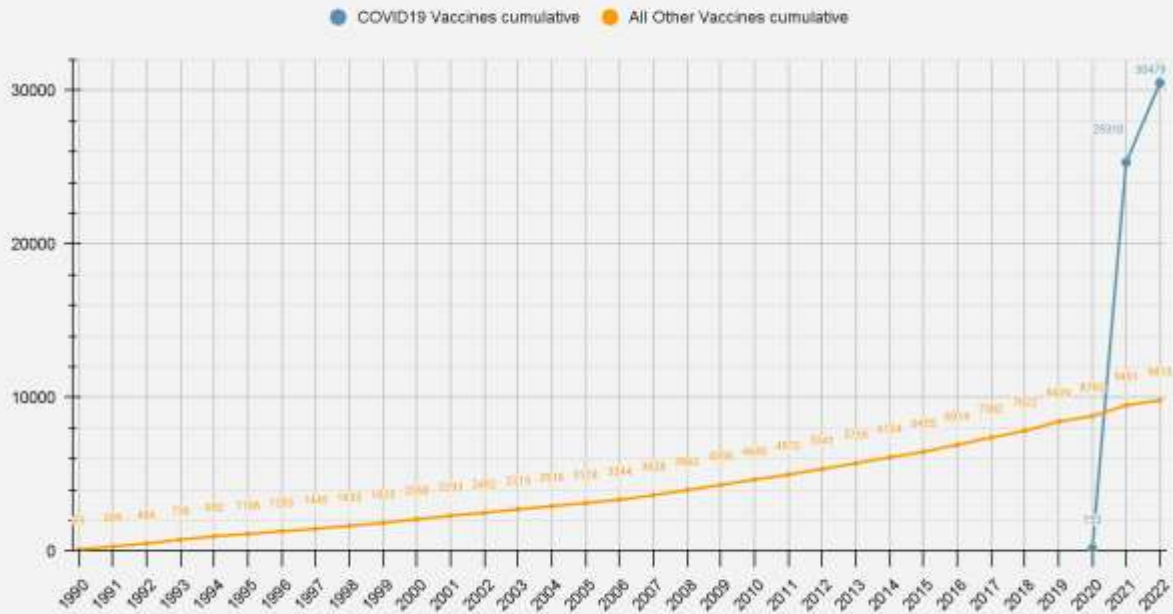

COVID Vaccine Injury Claims in Compensation Court Now Many Times More Than For All Other Vaccines Combined, Animal Safety Trials All but Skipped

[COVID vaccine injury claims](#) have recently skyrocketed to 5400. The CDC's VAERS [Vaccine Adverse Events Reporting System](#) now has seven times the reported deaths possibly caused by the COVID vaccines as all other vaccines combined since the reporting system was created 30 years ago.

The COVID vaccines are already unprecedented for bypassing the normal [one to three years of animal safety trials](#) in vaccine and drug development which are typical before a new drug ever enters a human, in human clinical trials. The average time for bringing any new drug or vaccine to general [use is 10 years](#)

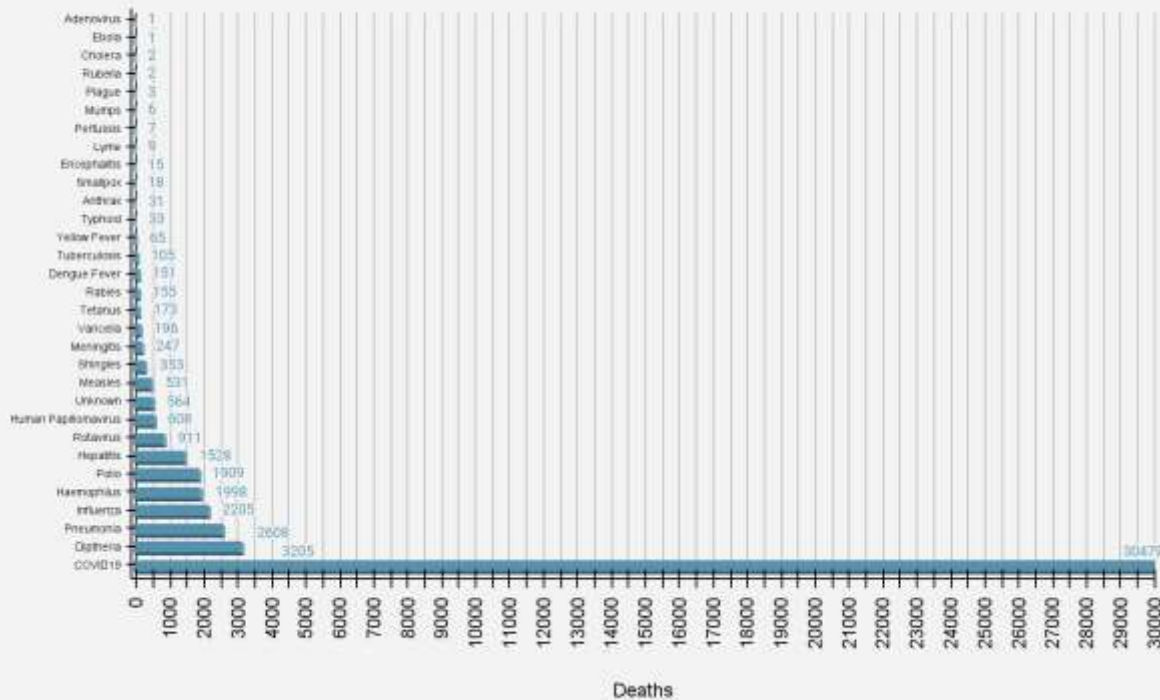

Reported Deaths by Year, COVID19 vs. All Other Vaccines, Cumulatively

Unreported by Media, Younger People are Dying at Unprecedented Rates

Recent insurance company data for the US and other countries shows an [unprecedented rise in all-cause mortality](#) since the roll-out of the COVID vaccines, as much as 40%. This would put the US on track for 1.4 million more deaths of all causes than usual by the end of 2022. Normally about 3 million people die in the US every year.

German Pathologists’ Findings Square with Other Pathologists

Dr. Burkhardt’s and Dr. Lang’s findings are similar to those of other pathologists. The [UK Daily Expose](#) writes:

“The director of the Pathological Institute of the University of Heidelberg, Peter Schirmacher, has carried out over forty autopsies on people who died within two weeks of receiving a Covid-19 vaccine and has [expressed alarm over his findings](#). Schirmacher stated that 30 to 40 per cent of people he examined died from the vaccine and that in his opinion, the frequency of fatal consequences of vaccinations is “underestimated.”...He has warned that the high number of unreported cases of vaccination deaths is partially due to the fact that “pathologists do not notice anything about most of the patients who die after and possible from a vaccination.”

German News Site [Augsburg General](#) (right-click to use Google translate from German to English):

“The doctor now wants to get to the bottom of the rare, serious side effects of vaccination – such as cerebral vein thrombosis or autoimmune diseases. The problem from his point of view: Vaccinated people usually do not die under clinical observation. “The doctor examining the corpse does not establish any context with the vaccination and certifies a natural death and the patient is buried,” reports Schirmacher. “Or he certifies an unclear manner of death and the public prosecutor sees no third-party fault and releases the body for burial.””

The [UK Daily Expose](#):

“Despite the criticism, Schirmacher did receive support from his own ranks, and the Federal Association of German Pathologists stated that more autopsies of vaccinated people who died within a certain time frame after vaccination should be performed....The Federal Association of Pathologists already requested this in March in a letter to Health Minister Jens Spahn (CDU), but it went unanswered.”

Another pathologist, [Dr. Ryan Cole, MD](#), who holds medical degrees from Virginia Commonwealth University School of Medicine and the Mayo Clinic School of Medicine, has made similar warnings about the vaccines. Dr. Cole shows his own lab evidence that Pfizer and Moderna mRNA spike protein injections may be quietly killing injection recipients through “micro-clots,” inflammation, and immune suppression.

Below: Dr. Ryan Cole, pathologist, on the dangers of mRNA injection in August 2021 ([view at Bitchute](#))

Doctors for COVID Ethics last April sent [letters to all members of European parliaments](#) who were mandating the experimental vaccinations that they are committing Crimes Against Humanity. The average time for bringing any new drug or vaccine to general [use is 10 years](#), including typically [three to six years of animal trials](#) before human testing.

In June of 2021, enlisting the aid of certain doctors and scientists, the media launched [into attack mode immediately](#) after a Canadian immunologist warned that the Pfizer/Moderna injections might pose a danger to the body’s organs, in particular the heart, brain, and through blood clotting issues.

The immunologist, [Professor Dr. Byram Bridle, said](#) in an interview in May 2021 that data led him to conclude that ***“We made a big mistake”*** by rushing the drugs into mass circulation. Dr. [Bridle had just received a \\$230,000](#) grant for coronavirus vaccine development.

Soon, the Internet was rife with “debunks” of Dr. Bridle’s concerns. A [Reuters “fact check”](#) proclaimed ***“There is no proof that spike proteins created in response to mRNA vaccines are harmful to the body, scientists have told Reuters.”***

An anonymous Internet user even created a website using Dr. Bridle’s name, [ByramBridle.com](#), and made the doctor and immunology professor out to be a

“quack.” Thus an all-out campaign with unknown funding sources was at work smearing Dr. Bridle.

Dr. Bridle’s concerns were echoed by [Dr. Robert Malone, one of the inventors](#) of the mRNA technology now being used by Pfizer and Moderna. Dr. Malone said that, prior to the drugs’ emergency authorization use approvals, the [FDA knew of these risks](#), because he himself had told them. ([Full transcript of Dr. Robert Malone June 2021 interview, video below](#))

***Summary of Dr. Malone June 2021 Interview by ([view at Bitchute](#))

An excellent video with Prof. Norman Fenton of Queen Mary University on how flawed data and definitions are used to fool the public is [HERE](#).

Dr. Lang Resigns from Professional Association Citing “Corruption” and Cover-Up

In the December 4th presentation of the series, the pathologists said they had shown their findings to the leaders of their professional organizations, but had encountered what could only be described as “corruption.” Professor Dr. Walter Lang showed his letter of resignation from the German Pathological Association, of which he was an early member, in protest of this “corruption.”

Dr. Lang concluded that the leader of the group was interested only in “burying” his findings, *“along with the dead.”*

Dr. Lang said the medical establishment was now *“monstrous.”* He said that UK data showed people who had been vaccinated were more likely to catch COVID than those who had not, referencing the chart below, and that *“vaccination is useless, it doesn’t protect you.”* ([Other sources, vaccinated vs. unvaccinated cases and deaths](#))

Below: Chart presented in September 20 Pathology Conference, showing COVID positive tests in UK per 100,000 in population for a recent time period, **vaccinated (RED BARS)** versus **unvaccinated (BLUE BARS)**, for different age ranges. In lowest ages range, under 18, data is limited.

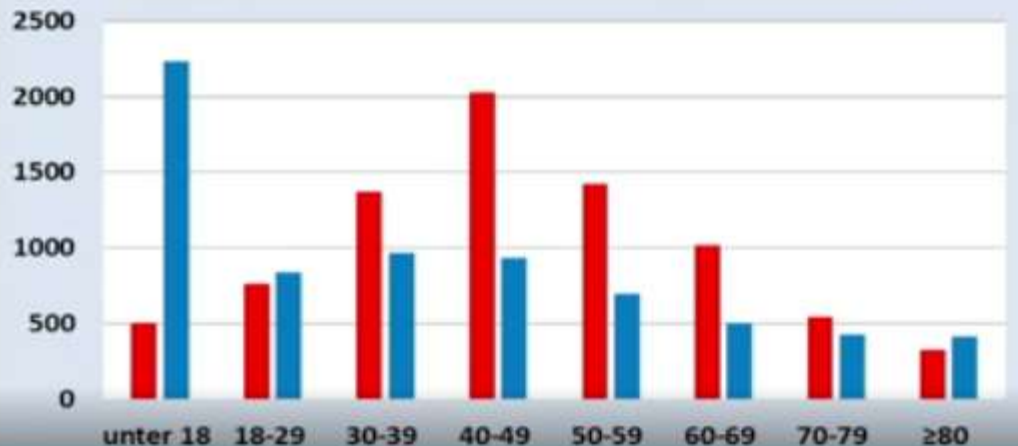

Risiko Nr. 3: Wirksamkeit der Impfung nicht wie erwartet?

Häufigkeit positiver Tests

- ❑ Geimpfte **über 30** infizieren sich häufiger als Ungeimpfte
- ❑ Virenlast bei infizierten Geimpften gleich oder bis 200 mal höher

Pathologists' Findings Follow Years of Dissident Doctors and Scientists Calling for Complete Halt to COVID Vaccine Roll-Outs

The findings in the German pathology series come after doctors and scientists have long called for a halt to the mass roll-out of the substances long [before Phase III clinical trials](#) are complete, which is at the earliest the end of 2022, and say that too little is known about the mRNA spike protein's long-term effects in the body. [Links to doctors' calls for halts to mass "vaccinations," partial list: [1](#), [2](#), [3](#), [4](#), [5](#).]

These warnings include that of Dr. Sucharit Bhakdi in July of 2021, video below. [Dr. Bhakdi](#) is Professor emeritus of the University of Mainz, where he served as the chair of the department of medical microbiology and hygiene from 1991 to 2012. From 1990 to 2012, he served as Editor in Chief of Medical Microbiology and Immunology. In 2001 he was awarded the [Aronson Prize](#) for achievements in microbiology and immunology.

In a video last July, Dr. Bhakdi warns of the precise type of damage to organs that pathologists are now reporting (below.)

Dr. Bhakdi warning about mRNA injections in July 2021 ([view at Bitchute](#))

Dr. Bhakdi and Dr. Burkhardt have authored a joint statement, entitled ["On COVID vaccines: why they cannot work, and irrefutable evidence of their causative role in deaths after vaccination,"](#) posted at [Doctors for Covid Ethics](#).

In October of 2021, the peer-reviewed, highly-regarded science journal [Toxicology Reports](#) published a study which estimated deaths directly caused by the vaccines “**could be in the hundreds of thousands for the USA,**” and stressed that long-term effects are as yet unknown.

After an uproar in the science community which resulted in the paper being formally retracted by the publisher, the authors of the paper [stand by their estimate.](#)

Below: Cover of issue of Toxicology Reports

Pfizer has requested in the past that the clinical trials data for its COVID injection be kept hidden [from public view for 75 years](#). Hospitals take in an average of [\\$160,000 extra per COVID case](#) from the US government. And in his new book, [The Real Anthony Fauci](#), Robert F. Kennedy Jr. reveals that high FDA officials are allowed to own parts of patents on the very drugs they are charged with regulating, and can keep up to [\\$150,000 per year in royalties](#), for life.

In closing an interview of pathologist Dr. Burkhardt this February, 2022, [Dr. Sucharit Bhakdi said:](#)

“There’s no word to express this. If they don’t start doing something, they’re going to be in real trouble because let us state this very clearly. These agents are in experimental stage of use. There is an iron law saying that if you are introducing a medicine or an agent into the body of a person under experimental conditions, then you must always assume that if anything happens to the patient, it is the new agent that is causing it. And you are obliged to go and find out. You are not allowed to turn away, you are not allowed to turn away.”

Best estimates are that COVID is a 99.8% recovery rate virus, similar to flu, according to Stanford [epidemiologist Dr. John Ioannadis](#). Common flu is 99.9%.

Fauci Admits PCR COVID Tests Do Not Measure Illness or Contagiousness

Anthony Fauci has made the shocking assertion, on MSNBC, that a positive COVID test of the kind which has driven nations to abrogate their most basic constitutional rights – and divided immediate families – means nothing in terms of public health.

[Fauci said](#) just before the New Year, on Dec. 29, 2021:

“PCR doesn’t measure replication-competent virus. It measures viral particles, nucleic acid. So in other words, I could be infected, have cleared the replication competent virus from me, but I can continue to be positive with a PCR for several days after recovering and not being transmissible at all.

The only way you can tell if it’s transmissible, if you can show that there really is live replication virus in you. And the tests don’t measure that.”

Thus in one fell swoop, Fauci undermined the basis for quarantine for a [99.8% recovery rate](#) illness, which like flu strikes down overwhelmingly end-of-life elderly, and admitted that the basis for “lockdowns,” and media alarms preparing the public for more of them, are junk. Some scientists have [long attempted to explain](#) that the PCR test only shows the presence of at least a minute fragment of a virus, as someone who has long recovered might have.

In 2020 the president of Tanzania famously [sent a sample to a lab to be PCR-tested](#) for COVID, without telling the lab what the sample was. It came back positive. The sample was of a paw paw fruit.

In the MSNBC interview, Fauci confirmed the words of his most vocal critic, the late inventor of the PCR test, [Nobel Prize winner Dr. Kary Mullis](#). In 1997 Dr. Mullis [said that the PCR test was of little use](#) in detecting viral illnesses, at that time referring to HIV.

Dr. Mullis, who died in [2019 just three months](#) before COVID hit, also had some [choice words for Fauci](#) during their contemporaneous careers, saying:

“Tony Fauci does not mind going on television, in front of the people that pay his salary, and lie directly into the camera.”

Nevertheless, the media still sounds ominous warnings about cases of COVID “variants” rising or falling, flexing the muscles of emergency powers claimed by governments as a permanent “new normal.”

Winner of Nobel Prize for invention of PCR test [Dr. Kary Mullis](#), Fauci “does not mind going on television” and lying ([watch at Rumble](#))

French Attorney Working with Reiner Fuellmich Arrested and Released, is Working on Crimes Against Humanity Charges Against Bill Gates, Fauci, Schwab, Others

The attorney, [Virginie de Araujo Recchia](#), is on a team of lawyers led by attorney [Reiner Fuellmich](#), widely known for successful lawsuits against Deutsche Bank and Volkswagen. Recchia was arrested on March 22 without charges and then released days later, after [international outcry](#).

Fuellmich has filed a [complaint](#) charging Crimes Against Humanity at the International Criminal Court (ICC) in The Hague, focusing on the British government but with possible subpoena powers of nationals in other countries. The ICC has assigned the [docket number OTP-CR-473/21](#).

Among the charges made in the ICC complaint are:

- “The number of covid-19 cases have been artificially inflated due to the inaccuracy and unreliability of the PCR testing...”
- “a further way that the Covid-19 statistics have been artificially inflated is by the ‘rebranding’ of the common influenza, pneumonia and other respiratory infections as covid -19. “
- “Massive short-term damage and death from the ‘vaccines’. “
- Proven increase in spontaneous abortion after a Covid m-RNA ‘vaccination. A recent study in the New England Medical Journal showed 8 in 10 women had a miscarriage after taking a Covid ‘vaccine’ before the third trimester (Appendix 25)
- the suppression of safe and effective alternative treatments for Covid-19 amounts to murder and warrants a full investigation by the court.
-

Soon after Virginie de Araujo Recchia was arrested by French police at her home, her supporters put out the following press release.

Via Nigerian news outlet [Paradise News](#):

“[Translation]: We are informing you that the lawyer M. Virginie de Araujo-Recchia was arrested this morning and placed in custody. We don’t fully know the circumstances under which such a measure was decided and what she is being charged with. We have been trying since this morning to determine where she has been taken. All our efforts in this regard have so far been in vain. Thanks for circulating this message, without changing a single word. We’ll keep you informed as soon as possible.”

Recchia was released on March 27 after [international outcry](#).

The Liberty Beacon posted a related article on December 20, 2022, which is very much related to this issue of Covid-19 scamming. **[America's Frontline Doctors: All Roads Point to Israel](#)**

It is important that the reader know that this world-wide pandemic/scamdemic has been a controlled psyop on the world and as The Liberty Beacon article above reveals behind the curtains of the global elite has been a "Depopulation" agenda of the Zionist Khazarian Mafia. America's Frontline Doctors points to the health freedom movement being anticipated, set-up - and of course controlled - by those who most likely created the bioweapon and the supposed vaccines. The suggestion is that the AFLDS is a controlled opposition. Historically, the House of Rothschild always, and I repeat ALWAYS controlled both sides of the issue, be it political parties, conflict between countries, social movements, through the use of "Divide and Conquer" using the Hegelian Dialect to achieve their end goal.

2% of the population is all that is needed to control the outcome in a particular situation. The Hegelian Dialectic is – “Thesis / Antithesis / Synthesis” or expressed another way – “Problem / Reaction / Solution”. We know from social psychology that the culture, the community, or state can be manipulated with as little as 2%. This is well-known by the global elite pushing its agenda of the New World Order. It is essential that the public wake up and push back against the UN and its World Health Organization.

In the ‘*New York Times*’ article, one has to ask the question what is their objective in presenting this obviously contradicting evidence that Covid-19 is a virus. I have been convinced that Covid was a “bioweapon” and that **5G** is the central link tying together all aspects of this genocidal agenda. In a recent Dr. Jane Ruby show, she interviewed Attorney Todd Callender and many questions that have existed were answered in that interview, which you can listen/view in the link below. This was aired today on December 20, 2022. It is important that you watch that program below.

[FULL EPISODE| WARNING: FLU SHOTS ARE NOW MRNA ...](https://drjaneruby.com/full-episode-warning-flu...)
<https://drjaneruby.com/full-episode-warning-flu...>

The sum of all the information revealed in this article confirms that if you want to live, and not be physically harmed, do not take any vaccine that has messenger mRNA. That goes for Covid-19 vaxxes, the yearly flu vax, and all vaccines. If you have to be vaxxed, you must ask the question, **“Does this contain mRNA ?”** If the answer is yes, refuse to take it.

The mRNA nanoparticles begin to replicate itself once injected to the body, and no one can with any degree of accuracy predict how long it will stay within the body. The issue was long ago revealed that once inside the human DNA, it begins to reproduce immediately and there is no switch to turn it off. The human immune system goes into overdrive to fight off the invading mRNA. This reproduction of mRNA eventually wears out the body’s immune system. The net result is that over the course of a few months

to a couple years, the body's immune system exhausts its ability to fight off the foreign mRNA, leading to autoimmune deficiencies (AIDS) and death.

Do listen to the above linked Dr. Jane Ruby full episode. To be forewarned is to be forearmed!

Blessings,

Pastor Bob, EvanTeachr@aol.com
