

Was it Covid, the Vaxxes Or Maybe it Was their 5G Phones with Cesium 137 GPS Locator Chip Sets

Beijing Previously Indicated That Fewer Than 90,000 Died In China From COVID-19. It Turns Out, The Number Is Likely Well Over 1.5 Million — Just In The First Few Months Of 2023.

The Chinese communist regime tried to cover up the outbreak of COVID-19 and has done its best in the intervening years to downplay the strong likelihood that the Wuhan lab — known for its dangerous gain-of-function experiments on coronaviruses — was the source of the virus that has killed millions worldwide.

The world has grown wise to both deceitful efforts. Now, it appears as though another narrative favored by Beijing is collapsing.

Whereas the Chinese regime suggested that the number of COVID-19 deaths inside China was fewer than 90,000 since the beginning of the pandemic, the number is likely well into the millions — just for the first few months of this year.

As of Feb. 9, China's [official COVID-19 death count](#) was 83,150 deaths.

Researchers at the time suggested this figure was a gross undercount since it only included those infected with the virus who died in hospitals but not those who died at home, [reported](#) the *'New York Times'*.

[According to the Guardian](#), besides requiring that COVID-19 deaths take place in hospitals to be counted, China also stipulated that only deaths caused by pneumonia and respiratory failure following a COVID infection would be counted, meaning sepsis and other complications associated with the virus didn't factor.

Zuo-Feng Zhang, chair of the epidemiology department at the Fielding School of Public Health at University of California, Los Angeles, [told](#) Time magazine in January the reported number was likely only "the tip of the iceberg."

On the basis of a report from Peking University, which indicated 64% of the Chinese population had been infected by mid-January, Zhang suggested 900,000 likely had died inside a window of just five weeks, presuming a conservative 0.1% case fatality rate.

Yong Cai, a demographer at the University of North Carolina at Chapel Hill who studies mortality in China, told the Times that the official figure was *"certainly an underreport of all [COVID] deaths. ... There's no question about that."*

Shengjie Lai, an epidemiologist at the University of Southampton, intimated that with the hospitals overloaded and the ICU beds maxed out following the relaxation of China's "zero COVID" restrictions, many Chinese died outside of hospitals.

Earlier this year, the Times provided four estimates from academic teams concerning post-restriction death counts based on: 1) the Shanghai outbreak; 2) travel patterns; 3) recent testing data; and 4) American death rates. The estimates were 1.6 million, 970,000, 1.5 million, and 1.1 million deaths, respectively.

These stood in stark contrast not just with Beijing's official count but with the World Health Organization's [claim](#) that China has only seen 121,536 COVID-19 deaths since January 2020.

This week, official data briefly appeared on a provincial government website that hinted at the academic teams' estimates being in the right ballpark.

Cremation tallies were shared Thursday to the government website for the eastern Chinese province of Zhejiang, reported the Times.

While the data was only available briefly before being taken down, epidemiologists have since had an opportunity to pore over a cached version of the information.

They learned that cremations rose 70% in Zhejiang in Q1 2023 to 171,000 — 72,000 more than in the same period last year.

Ben Cowling, an epidemiologist at the University of Hong Kong, reckons that if the new data out of Zhejiang, which has a population of roughly 65.8 million people, is extrapolated to China's population of 1.4 billion, the death toll is nowhere near the official count but rather "consistent with the estimates of around 1.5 million."

Researchers at the University of Texas at Austin and the University of Hong Kong reportedly also reached a rough estimate of roughly 1.54 million deaths from December 2022 through March on the basis of the cremation figures.

The Times further intimated that the cremation figures, coupled with substantial declines in life expectancy around China, are together indicative of untold carnage. If the real death count ever comes out of China, it will likely dwarf America's.

Many today are unaware or have forgot that in February of 2020, the Chinese telephone system reported that some 21 million fewer cell phone accounts were reported in a Chinese business publication, something that is highly unusual since few people ever give up their most important device!

The Chinese turned on their “Smart City” **5G** network on October 31, 2019, around the time of the World Military Games held in Wuhan, China.

Then there is the story of the “*Diamond Princess*” cruise ship that became the marketing tool to hype this novel rogue virus fear around the world. 14 elderly cruise passengers between the age of 60 and 81 died supposedly of the Coronavirus, at sea. A fifteenth passenger died after the ship was allowed to dock. Another 712 passengers were sickened according to the Princess Lines. Coincidentally, a few months prior the cruise line outfitted its cruise ships with brand new **5G** communications (Medallion Net® ‘The Best Wi-Fi at Sea’) transceivers/antenna. I must have written a dozen articles on the cruise ship industry that was shut down for an entire year plagued by outbreaks of **5G** / Covid virus! The media had a gag on any link suggesting **5G** and Covid were really one-in-the-same. Doing searches on the Internet for this story were always preceded by the ‘fact checkers’ debunking the links. If this story had gained traction, the law suits would bankrupt the cruise ship business!

While most of the world has since forgotten all of what led to the so-called WHO pandemic officials, we were scammed big time; however, there remains many questions unanswered as to whether people died of Coronavirus, Covid-19, the vaxxes, or from those brand new **5G** phones that were introduced.

Then we had all the news about China’s problem keeping workers at the assembly line at Foxcon’s huge plants in China, as thousands were being sickened, even dying, and the CCP had to lock employees down so they could not escape. That was in the fall of 2022, delaying the delivery of millions of new **5G** cell phones for months. The plant assembled a half-million new **5G** cell phones daily. Most of that production has been moved to India by Apple and its Foxcon assembly plant.

I wrote an article about how it all came down to the GPS system in cell phones. I posted the article in late November of 2023. Here is the link that explains that **5G** cell phones are cancer causing devices.

[It All Began With GPS](#)

11/20/22

Why You Should Not Buy or Own A **5G** Cell Phone!

When did anyone ever hear about Turbo-Cancer before? The first time I heard it I thought it was a mistaken reference to Turbo-Tax. Turbo-cancer is a term used to describe a dramatic increase in the spread of cancer cells in the lymph nodes under the arms near the armpits. It is caused by spike proteins from mRNA jabs that serve as a carcinogen, propelling cancer cells to multiply exponentially and invade the rest of the body. The term is also used to describe new cancers that are being diagnosed, which seem to grow very aggressively, spread very aggressively, and be very resistant to treatment.

Now it would make a whole lot of sense if we remember that the spike protein in the mRNA shots are attacking and rendering the human immune system ineffective and

helpless while folks are using their **5G** “smart phones” at the same time the “smart phone’s” GPS locator chip set is a radioactive isotope that contains the Cesium-137 microdot chip has a half-life of 30.7 years.

That is like double-timing your demise. Don’t forget that the Chinese death data noted above was kept secret from the world since **5G** went live in China on October 31, 2019! The Chinese lead the world in the field of wireless energy. The Rockefeller school of medicine has a one-track community approach to cancer – chemotherapy, radiation, or surgery so it really does not matter to them what the cause of your cancer.

The point I am making is every country on the planet has huge \$\$\$ reasons not to look at the problems of wireless energy, whether it be 2G, 3G, 4G, 5G, or 6G. If they can keep the public in the dark about the dangers of wireless energy, the bucks keep rolling into the coffers of all involved.

I am a personal case that blows that out of the water and I will tell you why so! Three months ago, I decided to hard-wire my computer. Almost a month ago, I decided to keep my cell phone in a Faraday Bag (essentially blocking pinging for a connection). I had become desperate for relief from my Lymphedema pain, which began back in June of 2010. We had Verizon Wi-Fi installed in our home back in Turtle Creek, PA. It was installed on June 10th, 2010, and five days later my legs below the knees began to blister and leak for the first time in my life.

My wife worked as a patient intake in the Emergency Room of the University of Pittsburgh UPMC’s McKeesport, PA hospital and on a Sunday afternoon we went to the ER. I was admitted and released six days later with no established diagnosis. Six doctors examined me in every way to Sunday. They did sonograms, blood tests, and Medicare received a bill for almost \$8,000. The hospital staff never changed the bed sheets and I was in an isolated room out of the way from the rest of the floor I was on. The blistering stopped and life went on for me.

Then two years later we moved back to Kentucky to help with my wife’s son and his wife raise their five small children so she could complete her nursing school education. The first heavy snowfall in the winter of 2013 was a dense moisture event that brought down all the foliage on the dead-end street where we lived. That morning I got up to find my legs blistering once again. My daughter-in-law came over to check out my legs at my wife’s request. Still no explanation! Later that morning I went up to my computer on the second floor. The sun light was bright and beaming in through the dormer windows. I decided to take a look out and to my surprise on a hill about 1,800-feet across the valley was this cell tower gleaming in the morning sunlight. Because of the foliage, I had not been aware of the cell tower. After a few days the blisters broke and dried up.

Then we learned that the former Methodist parsonage where we lived in the 1990s when I was a graduate student at Asbury Seminary became available for rent and we decided to rent the small house. It wasn’t long after I began to experience more leg problems and soon discovered that there are 2 cell towers within a half-mile outside of

my study. They were not there back in the early 1990s but my legs again broke out in blisters and at one point were swollen and were so inflamed they were fire engine red in color. I have been disabled since 2015 from wireless energy radiation poisoning. I have been hypersensitive to electricity for years. I built a 10-room home in the early 1970s and “hot-wired” it most of the time. I was too lazy to go to the basement breaker boxes and turn off individual circuits. My house was all-electric, and I took my share of jolts in my effort to short-cut my work. Each room had its own individual baseboard heating unit and so I did what is called “hot-wired”. I believe I was hypersensitive to electricity long before that but it became pronounced after building my home in the mid-1970s.

This past winter we had a series of storms and tornados that went through central Kentucky and I was monitoring them live on Accu Weather radar. At 2.39pm on February 2nd, 2023, we lost all power and the internet as well. My computer auto-saved the document I was working on at that precise moment. The church parsonage and church had new roofs put on a few weeks ago from the storm damage. We had utility poles snapped and trees all around us uprooted and broken off. Within an hour of the loss of all electric power, I noticed an easing of the pain in my legs. Later that evening I was without the excruciating pain which comes with Lymphedema/Lymporeah and walking like I was once able to do. For five days I was ecstatic. When the Louisiana PEP power crew began the process of replacing the broken utility pole, installing a new utility pole, and install a new power transformer my thoughts were of mixed reaction. I knew that the nearby two cell towers were out of power as well and so I expected once power was restored that my pain would return. As the crew foreman gave the OK to throw the bar, the lights went on in our kitchen and the microwave oven and our electric range beepers went off and sure enough within an hour or so my pain returned to my legs.

The absence of electricity for five days confirmed that my Lymphedema was more than simply a food issue. People with Lymphedema are encouraged to eat a Gluten-free diet. My own research suggested that all wireless energy devices should be hard-wired. I decided to then get my grandson to hard-wire my computer. This reduced the pain level by half over the following weeks yet I still experienced enough pain to cause me to look at other possible causes. I bought a Faraday Bag and began to put my cell phone in it so that it would not be pinging for a cell tower connection. Since I am disabled my wife thought it best for me to have the phone handy should I need any help. I was keeping it at arm’s length distance but it was still close enough to aggravate the constant pain. After the first night’s experiment there was noticeable difference with minimum pain in my legs and feet. I still run the experiment and I sleep better, there is a significant difference in the pain level as well as the type of pain.

From a nutrition point of view it is not always possible to eat Gluten-free, with such things as processed food products, where chemicals and additives can cause flair ups and I can’t figure out why. One of the strangest examples was popcorn. My wife would buy me large bags from the Dollar Tree and I never thought it would be an issue. I had several good days and I had an open bag of popcorn beside my work area and I took

three handfuls and within fifteen minutes I was in terrible pain. I have never bothered to read the ingredients of bagged popcorn. I copied down the items on the ingredients and have been doing an investigation of the four items listed. The bag did say on it below the ingredients section that it was a “bioengineered” product, whatever that meant. Suffice to say, I no longer eat bagged popcorn.

At this point in time I have isolated my Lymphedema to three separate causes:

1. Wireless toxic energy,
2. Processed foods ingredients and additive, and
3. Weather changes. (5G wireless is heavily impacted with types of weather conditions.) In fact, 5G signal strength requires stronger energy levels.

Each is recognizable and has its own reaction as to the type of pain. I monitor the external wireless toxic energy with one of two types of meters to measure EMF/EMR/Magnetic fields. I am able to identify when for whatever the cell tower operators tweak their output. As I was writing this I was following the mainstream media narrative being pushed to cover the lies and cover-up that is underway.

Today Paul Craig Roberts posted a piece that separates the facts and lies we are being fed by the global elite.

[Will the Largest Organized Mass Murder in World History Escape Accountability?](#)

Paul Craig Roberts • Tuesday, July 25, 2023

The accumulated evidence is overwhelming that Covid was an orchestrated pandemic. Intentional use of the faulty PCR test, intentional false reporting of Covid deaths as a result of World Health Organization guidelines and financial incentives to hospitals to report all deaths as Covid deaths, and prohibited treatment by known cures together produced a high level of fear that drove the masses to accept the Covid “vaccination” that generated huge monetary gains for Big Pharma and associated shills such as Anthony Fauci and massive inroads on civil liberty by governments.

Hardly anyone died from Covid itself. They died from lack of treatment. The protocol was that if you became infected and if you worsened after a week, go to the hospital where you were put on ventilators, an incorrect treatment that usually was deadly. Doctors who saved the lives of their patients with Ivermectin and HCQ were punished. Corporate doctors were fired, and those in private practice suffered attacks on their medical licenses by authorities, resulting in loss of license to practice medicine. Highly distinguished medical scientists who blew the whistle on this death-maximizing approach were demonized, and every effort was made to silence them and to destroy them professionally.

The greatest number of deaths, which continue day by day, is from the Vax. Everywhere every day sports stars and entertainers who served as advertisements for the safety of the Covid “vaccine” are suddenly dropping dead. The corrupt medical establishment turns a blind eye.

The lockdowns, the masks, the “vaccine” did extraordinary harm to people and benefitted no one except Big Pharma’s profits and government’s agenda to weaken civil liberty.

All of this is known, and there has been no accountability. A program of mass murder and injury to the world population is being ignored. Medical authorities are still recommending the Death Jab, even for babies. This guarantees that a second and a third round of death and injury is coming from more orchestrated pandemics. Bill Gates has promised as much. Such gullible populations can expect no less.

Why is this murderous plot against humanity being ignored? Thousands of medical scientists and doctors are not ignoring it, but the media continues to accuse the leading experts in the world of spreading “misinformation.” Efforts continue to be made to silence science and suppress information. Universities and medical schools themselves are part of the effort to prevent the truth from being acknowledged.

Another part of the problem is that many of those who were deceived and who so adamantly defended the Vax, lockdowns, and masks to family and friends are too embarrassed to admit their mistake. They are too fragile to say: I made a mistake and have destroyed the health of my child and killed my mother. The authorities know the weaknesses of people and use their weaknesses to protect and to further the authorities’ agendas.

The insouciance, gullibility, and weakness of the majority of the population is inconsistent with the continuation of civil liberty. Totalitarianism is setting in, and it is being tolerated by the masses and joyfully welcomed by Democrats and the Left-wing. Below are more reports of evidence that the Covid “pandemic” was a mass, murderous deception.

The World Health Organization Caused Deaths to be Incorrectly Recorded as “Covid Deaths” in order to Create Fear in Behalf of the Official Narrative.

NO PUBLIC HEALTH AGENCY CAN BE TRUSTED

They are bought and paid for by Big Pharma

In nearly 30 years of study of wireless energy analysis, as suggested in my linked article on page 3 above is that the huge outbreak of Turbo Cancer that has begun showing is a direct consequence of the Cesium-137 isotope used in the **5G** chip set of cell phones. The Atomic clocks used to set all clock time use Cesium-137 as their standard for accuracy. Those Atomic clocks are contained within shielded cabinets to minimize exposure to workers.

In the United States, the standard of time is regulated by the U.S. Naval Observatory's Master Clock (USNO), the official source of time for the Department of Defense. The effects of these mechanisms are felt by all of us in the form of alarm clocks, computers, answering machines and meeting schedules.

The best cesium fountain atomic clocks are now predicted to be off by less than one second in more than 50 million years.

Small amounts of Cs-137 are present in the environment from weapons testing in the 1950s and 1960s, so people are exposed to some Cs-137 every day. However, Cs-137 is dangerous in the large, concentrated amounts found in radiation therapy units and industrial gauges. The sources in these devices are designed to remain sealed and keep people from being exposed; however, if these canisters are intentionally or accidentally opened, the Cs-137 inside could be dispersed.

How can it hurt me?

External exposure to large amounts of Cs-137 can cause burns, acute radiation sickness, and even death. Exposure to Cs-137 can increase the risk for cancer because of exposure to high-energy gamma radiation. Internal exposure to Cs-137, through ingestion or inhalation, allows the radioactive material to be distributed in the soft tissues, especially muscle tissue, exposing these tissues to the beta particles and gamma radiation and increasing cancer risk.

All so-called "smart phones" contain a Cs-137 chip isotope with a half-life of 30.7 years and gives off gamma ray radiation, hence the risks for an explosion of Turbo Cancers. The Cs-137 isotope is what enables **5G** to function as it was intended. That is because Cesium-137 cycles 60 times a minute (60 seconds = a minute). Think about where your **5G** "smart phone" is on your person all day long!

Blessings,

Pastor Bob, EvanTeachr@aol.com
